And just exactly what do you expect that they could do for $10.00
a month?

Please name me ONE organization in ANY "hobby" activity that
provdes the scope of servcies and resources the ARRL offers to it's
target peer group.

Awaiting your informed response.

I think this is one of those cases where some people think that their membership is a subscription to QST. Its a lot more than that. ARRL does a lot for Amateurs, even those who hate the organization.

You're joking, right? I put something in each envelope - either cash or a Ham Radio Outlet gift certificate (I only had fifteen gift certificates, so everyone else got cash).

I don't think he's that gullible. But, if he is, he'll have to read to
this message to discover there is no cash or gift certificate (as mentioned
in my last message).

Don't count on it. The way I figure it, and based on what I've seen so far,
the Feds are just going to keep tabs on him. Collect as many complaints as
possible (they especially like the commercial products and blasting on top
of on going QSOs). Then when its time to renew.....well bye bye.

Dave,

You are wasting your time. Twit is a self proclaimed 'flower child' (of
the mid 70s !!!). Which translated means she is a braindead socialist
thinking Demoncrat.

Well if that is what you wish to believe mr. kreep low cycle, then you are perfectly within your right to do so. I have never operated a tranmitter on cb or any frequency I am not licensed to use, and I don't have to prove a cottin-pickin thing to you.

How about answering my questions. Do you pay for all your doctor visits
and medications out of your pocket? When you do qualify for Medicare,
you are going to refuse?

Hi all,

Referring to the famous Baghdad dinner:

> > But in the next breath Rivera added, "They were even more impressed
> > with their turkey dinner."

Yes - and everybody knows that the turkey was a fake.

So was the bird on the plate.

ENJOY!

Igor

I don't like ARRL because:

1) Membership price too high
2) Can't separate QST from membership
3) QST only counts as $15 of the $39 membership fee
4) Incentive licensing from the 60's
5) Ham radio is a dying hobby
6) 5wpm Extras
7) No value given for the money invested
8) No accountability of the board and Executive staff
9) Really doesn't represent the majority of hams (majority don't
belong)
10) Really no different than 'NRA', 'AARP', 'NAACP'. Take your money
and use it for their own agenda, NOT yours!

That is enough for a start.

Sorry to see '73' and Wayne Green exit publishing.
Sorry to see 'Ham Radio' exit publishing.

ex ARRL member

I ask basicly the same thing, which foreign countries, and to provide documented proof that those foreign countries recognized those "licenses", so far nothing from mr. kreep low cycle (just more cb bluster). The ATI is just an international club and any "license/call signs" issued carries no more authority to transmit on any frequency then if the ARRL issued licenses.

That'd only be because I've refuted your silliness on yet another
occasion, Kim. You'll have to make up your mind on whether I'm the

biggest since you've awarded similar honors to Dwight, Dan, Larry and me at various times.

> You go back into your silver spoon 'gain,
> now...

I actually own some silver spoons, Kim, but if you're referring to the same soon you say I was born with, you're as wrong this time as the first time.

>Buh bye...get another book.

Why, thank you. I have a scads of books but I always enjoy getting a new one!

Aren't you going to tell me whether you believe yourself entitled to free health care at government expense? How about whether you think our foreign policy dollars are being misused?

I'm not sure that she knows I'm right but I suspect that she had an idea
that she is incorrect. Kim would rather babble about silver spoons and
books than defend her erroneous claims.

> Yep,..... a knee jerk, bleeding heart, commie

I don't know if I'd use a term like "commie". Kim writes like a
socialist and most of her positions are based on her emotions and
"feelings" rather than what she knows to be fact.

Your question is irrelevant since I already stated that government is
not paying for my medical care. Neither my parents nor my sister are
paying for my medical care. My Uncle Frank isn't paying and you aren't
paying.

> When you do qualify for Medicare,
> you are going to refuse?

I'll let you know when the time comes. Is that fair?

Foreign aid wouldn't begin to cover socialized medicine and it is money
well spent.

Really?? Many local clubs charge anywhere from $20 to $30 and can't do a whole lot for their members except maintain the local repeater.

> 2) Can't separate QST from membership

Why would you want to?

> 3) QST only counts as $15 of the $39 membership fee

Actually you are lucky that it counts as little as that. These days typical magazines generally cost $3 to $4 an issue so they must be getting a good break on the publishing.

> 4) Incentive licensing from the 60's

That was the FCC's idea not the ARRL's.

> 5) Ham radio is a dying hobby

There are more hams than ever before in history.

> 6) 5wpm Extras

So what. The very earliest requirements for licensing hams were, guess what, 5wpm.

> 7) No value given for the money invested

Let's see. Ham radio would have remained closed after WWI if not for the ARRL. They have managed to expand our HF and VHF frequencies. Battled, athough sometimes unsuccessfully, to preserve our allocations. Have lobbying power in Washinton. Convinced the FCC to come up with what is now PRB-1, which gives hams some protection from restrictive city ordinances on antenna height. They are now fighting BPL, which will tear up our HF bands if implemented, and they are working on a bill in Congress to give hams protection from restrictive covenants.

You have and will continue to benefit from the ARRL's work, all without having contributed a dime.

> 8) No accountability of the board and Executive staff

They are accountable to the membership. Any member can challenge them. Any member can get involved, run for a position, and work to change things.

> 9) Really doesn't represent the majority of hams (majority don't
> belong)

That is not the ARRL's fault. They keep trying to recruit. That majority of hams that don't belong don't belong to any other organization either nor do they attempt to form an alternate organization.

> 10) Really no different than 'NRA', 'AARP', 'NAACP'. Take your money
> and use it for their own agenda, NOT yours!

The agenda is set by the MEMBERS. Any time the MEMBERS do not like the policies they can elect new officials. The agenda is based on what members decide to push.

>
> That is enough for a start.
>
> Sorry to see '73' and Wayne Green exit publishing.

You obviously expected the ARRL to ignore all the other member's preferences and expected them to have an agenda 100% tailored to your wants and expectations. That doesn't happen in any organization. If you want them to change, you have to get in there and work hard to get into the thick of the action. Sitting on the sidelines and criticizing doesn't accomplish anything.

Earlier you stated, "it matters not whether insurance covers my visits
or medications." Well, if you have no insurance and you can't pay out of
you own pocket when you receive medical care, then yep, your parents,
sister, Uncle Frank and the rest of us are paying for your medical care
with our taxes that subsidize medical care for those who don't pay.

Shouldda added "and a cheap whiner" after member. I am not going to waste space replying to each of the above as that would mean that there was some merit or better yet thought there. I run into the same rants from many of the other organizations I belong to when it comes to membership and dues. These people spout off their big mouths which have no shortage of hot air ...but part with a buck or two ....Katie bar the door .... I can take and listen to criticism regarding any organization if the person was a member and not a sap sucking leach-parasite. And yet the ARRL is for all hams. Show me an organization anywhere that operates without funds and I'll show you one that the few work their collective asses off for the benefit of the remainder of the membership i.e. the parasites. So I guess ham radio should collectively ask these tight-wad, freebie seeking, selfish, greedy and non-sharing hams ......WHAT HAVE YOU DONE FOR ME LATELY ????.....expect moan about crap that went under the bridge a long time ago, squeezing that nickel till the Buffalo defecates and hide behind some initial name in the newsgroup.

Take care, don't share and keep on spewing hot air ...

Hello Clint ....

Well the FCC handed over testing to VEC groups and we all know how the milk of human honesty flows with that decision. Maybe if the ARRL did have control of the "ham" spectrum we wouldn't be concerned about protecting our turf from other interests. It is sort of ironic that the ARRL is becoming in some way like the NRA in that it is soliciting monies to protect the "bailiwick"

Ham radio Gods??? No more than the FCC is at present and I think I would take Newington over Washington to give me more of a radio bang for my buck ... albeit neither is perfect.

Why do I not like the ARRL? I will answer that with another
question. Would you trust a gang of Yankee carpetbaggers,
the same bunch who stole from the southerners at the end of
the War Between The States? You would? Good! Sign
up for life membership with the rest of the NewingtonYankee
gang. As for me, the league can go f..k itself, since that is what
it has been doing to the rest of us for decades.

Dwight, things haven't changed -that- much. You've somehow rolled
national defense and NATO into the United Nations. It just isn't so.

Brian

>that make it easier for people to drive their vehicles to work than ride
> mass transit.

One of the main problems is that even in the most densely-populated areas
during peak traffic hours, all those cars on the roadway only occupy about
five percent of the available road surface. Intelligent highway systems could
solve that problem by taking the drivers out of the loop during, taking control
of the cars and allowing them to safely convoy almost bumper-to-bumper.
In this way, traffic volume could be multiplied many times without building
more roads. Would you trust a computer to drive your Buick?

Alun:

The situation you describe pretty much sums up the limitations that geography
imposes on public transit systems. A partial solution would be to utilize
demand-
response systems whereby busses travelling flexible routes on flexible
schedules can pick up commuters at their door, and transfer them to the nearest
fixed-route terminal. Once demand patterns are established, the system can be
re-scheduled at will to ensure maximum transit vehicle utilization without
inconveniencing passenger scheduling. This is done all the time in my own line
of work, which is Paratransit operations. The concept can be easily overlayed
on any other route structure, and there would be the advantage that most, if
not all, of the passengers would be able-bodied, and there would be no time
lost loading and securing wheelchairs or providing assistance to slow-moving
people who have difficulty in boarding the bus. The problem, of course, is
that adding such a service would come at a high cost. Would most commuters be
willing to pay the price of being to leave their cars home? A fare structure
which required the rider to pay the full, non-subsidized cost of the
demand-response portion of his transit service would mean forking over a fare
of up to $10-15 for that portion of the ride. Of course, some commuters pay
that much just to park their automobiles for the day. OTOH, they would not have
the option of making a trip to Home Depot on the way home.

The best solution would probably to simply arrange it so that more people were able to work closer to where they live. Another is to adopt the European paradigm of establishing communities with higher population density in residential areas. That would mean more townhouses and condominium apartment complexes, and fewer single-family homes surrounded by acres of grass and concrete. When more people live closer together, it becomes much more cost-effective to provide mass transit.

>
>Kim W5TIT
>

Here's a little known fact that much of the travelling public would never be
able
to guess: There are no regulations at the state or federal level which govern
how
many hours a transit operator (bus driver, motorman, paratransit operator,
etc.)
can work within a 24-hour period. It is common practice for transit operators
to
work inordinate amounts of voluntary overtime, sometimes putting in double
shifts on a daily basis. The Interstate Commerce Commission (ICC) governs the
amount of hours truck drivers can be on duty during a 24-hour period, I believe
the present limit is 10 hours of continuous duty with a mandatory 8-hour rest
period thereafter. Log books documenting time at the wheel and at rest are
required, and in the case of single-operator trucks, the rest periods must be
verified by time and mileage records that are a part of their log.

Since transit vehicles operate within a closed region, as opposed to
interstate, they are not covered by such rules. Therefore, the bus you board
could be being driven by a person who has been on duty for 10, 12, or 14 hours
-- or more! I recently attended a meeting of my local union in which our own
local union President claimed that he routinely worked in excess of 100 hours
per week as a fixed-route bus driver. Keep in mind, there are only 168 hours
in a whole week! This is obviously a shocking hazard to public safety, and
legislation is obviously needed which establish and enforce reasonable operator
duty limits within the transit industry. "Scarey
drivers" indeed, Kim. Who wants to ride a bus being driven by a zombie?

That's quite a leap, JJ. If I'm against socialized medicine and have
clearly made known my opposition for government provided medical care,
I'm not likely looking for a handout.

How much is a lot? What percentage of U.S. aid money lines the pockets
of dictators? Is it enough, as you claimed, to take care of providing
free health care to Americans?

Did you get actively involved? Did you become a section director? Did you
campaign to sway the majority to your opinion? Or did you just write a
letter or two complaining and were disappointed because it didn't instantly
change the ARRL's policies? If you want your point of view to be policy
then you have to become very politically active in an organization.

I did? I don't remember saying a single word about the United Nations. You were talking about NATO ("I never knew that NATO benefited the USA," you said). I responded to that. Our military relations with Europe is important and NATO is a major part of that.

I tried to get you a membership in some organization, but I haven't been able to find one with standards low enough to accept you. But don't give up hope yet - there is still several days till Christmas and I've found a Ham Radio Club in Gyzylarbat, Turkmenistan, that has shown some small interest in accepting your membership.

Did you get actively involved? Did you become a section director? Did you
campaign to sway the majority to your opinion? Or did you just write a
letter or two complaining and were disappointed because it didn't instantly
change the ARRL's policies? If you want your point of view to be policy

then you have to become very politically active in an organization.

Dee D. Flint, N8UZE

Hey, Dee. Where is it written that one must be a member of the ARRL to dislike or disapprove of their policies? Your opinion is not the end-all of arguments in this arena, shock that this must be to you.
The fact of the matter is that many, many Hams, such as myself, have dropped our memberships because of the failed policies and ever-increasing costs of said membership.
What do we get for the forty bucks a year? (or whatever it is now).
Nada...nothing.
I will continue to work DX and continue to enjoy the hobby, but the only "loss" as I see it is that I will no longer be able to attach the ARRL logo to my QSL cards. No loss there.
By the way, when those of us who used to be ARRL members voiced our dissent, our voices went unheeded. Bottom line...what's the use? One soon learns that it is a useless endeavor to "piss into the wind".
I am but one voice in this maelstrom, but I take comfort in knowing that the ARRL no longer has use of my dollars.
Know what? I am getting along just fine.
I will not give my name or callsign on these news groups.
Even YOU should be able to understand why.

> (snip)

Several years ago (four or five), QST was available at the Barnes and Noble bookstore in this area. But it then disappeared off the shelf and I haven't seen it since. When I asked the manager about it, he looked on the computer and said the magazine was no longer available from the supplier. This was surprising since the magazine sold out almost immediately each month (I missed several issues because of that).

The newsgroups rec.radio.shortwave and rec.radio.cb has been deleted from this reply (discussion is off-topic in those newsgroups).

I think what's missing is the political will to spend the money. Busses are no solution. They have to use the same roads as the cars, so by the time they have stopped to pick up and set down passengers they don't even have a fighting chance to make the trip in the same time as a car, even with HOV lanes. We have bus service, but it is rush hour only. It will be a cold day in you know where before I ride the bus.

If you build the subway lines only half way to the suburbs, it becomes easy to think they would not get enough passengers if extended further, as they are already under-used. Of course they are under-used when they don't go far enough to get you home. What else should anyone expect?

And just who is

hamvideo@juno.com ?????

I have given a real email address and feel free to respond to it.

The ARRL hasn't represented the membership directly---EVER!

The ARRL has had it's own agenda (big money) for years.

The ARRL would be considered a large corp. in most sectors, operating
under a non-profit status.

The only good about the ARRL is/was QST and now I can't even find it
on the news stands.

Bye bye ARRL.

Bye bye ham radio as we know it.

At $4.99/mo ($59.88/yr) plus tax, I'm sure it wasn't a high volume business
for Barnes and Noble, since that's a 53% premium over the membership dues,
and you don't get the other benefits which comes with membership. Only an
idiot would regularly buy QST from a news stand!

There is no such animal as a 'section director'. Perhaps you meant 'Section Manager'. There is no requirement to be a life member to be elected to that position. Neither is there such a requirement for Division Director or Division Vice Director (I was twice elected to that position, and I'm not a life member.)

Doncha just hate it when facts come into play and spoil your lovely rant?

OK Bill, I'll try this in special english.

1. I didn't start the e-mail list that he is calling me a spammer about.

2. He removed my e-mail address access to ALL of his e-mail sites.

3. Thus, I have no way to respond.

4. This is a public forum.

5. If he don't read it, perhaps someone would pass it along.

6. Any questions?

This is Dan/W4NTI in special english.

Bullcrap. Any elected office is open to any ARRL member. Some have class
of license restrictions, but not Life Member requirements.

Several of us have already listed the numerous benefits of the ARRL. Again how did you voice your dissent? Did you get actively and heavily involved? Doesn't sound like it. If you did get involved, you did not convince the majority of members to change to your point of view.

Instead you choose to have little to no impact on proposed changes by the FCC. Yes I know individuals can write letters but a decent sized lobby has a far greater effect. An organized body can much more effectively solicit the backing of other affected groups on questions like BPL.

Being "One voice in the maelstrom" is a waste of one's time as it will be completely obliterated by that maelstrom.

Now I do not say that everyone should be a member of ARRL. That is up to the individual. However if you are not, then don't complain about their policies. Don't complain when BPL makes HF useless in your area. Don't complain when VHF/UHF frequencies get reallocated to commercial uses. Don't complain if the government should choose to eliminate amateur radio entirely as it has tried to do twice in the past.

Dee D. Flint, N8UZE

It probably was no longer cost effective to sell it on newstands.

If the ARRL is making money (a no-no for a non-profit corp) then report them
to the IRS. If they are not making money, then no matter how big they are,
it is not about money since no one is making a profit.

There are circumstances that might require one to be an "idiot," Hans. In my case, I purchased it at the news stand because ARRL never seemed able to deliver my copy of the magazine (not fast enough to keep up with me). The first time I joined, my address changed several times in a single year. I joined at my home here. Two months later, I went elsewhere to prepare for our operations in Kosovo. Several months later, I went to Italy for the actual Kosovo conflict itself. Even though a change of address was sent with each move, I received only one issue of the magazine that year.

The second year was pretty much the same as the first. I moved back to the USA, moved several months later, and finally ended up back here again two months after that. I got two issues of the magazine that year and didn't rejoin at the end of the year (and didn't make any effort to get the magazine for several years).

I joined ARRL again this year and have gotten each copy of the magazine so far.

I happen to be a stout conservative. Regardless of whether one is liberal
or conservative, one has to get involved and stay involved to be effective.
Complaining about lack of leadership simply shows that either you didn't
want to do the work yourself or that you were unable to convince the
majority to back your view.

This is not a particularly effective way to change the policies of the
organization.

Not hardly. I disapprove of some of the policies but I do not expect it to change when my view doesn't represent the majority view. I do not consider differences of opinion on some policies to be reason to stop supporting them. Also I merely state that non-members shouldn't think they can change the policies. The ARRL policies, as with any organization, will reflect the opinions of the majority of members. Someone with a minority opinion in any organization will have to work very hard to get the majority to adopt it. Organizations have no obligation to reflect the opinion of non-members.

Won't happen, Dan. People like that have selective memory. They'll rail about how QST doesn't have articles about what they want to see, and conveniently forget about the important jobs ARRL does for us.

1. That only a minority of hams belong to ARRL speaks much more about hams than it does the ARRL.

2. I would challenge the ARRL haters to come up with scenario's of what the ARS would be like today (if it even existed) if there was no ARRL.

Dan,

You may find it useful to use the word "collectivist" as a general
term for what you're discussing. Meaning any system that values the
"collective" over the individual, and thereby denies individual rights
- and responsibilities.

There's no such position. The ARRL has Section Managers, Division Directors and Vice Directors.

Directors and Vice Directors are elected by the membership. And it is they who set ARRL policy. They're from all over the country, not just Newington.

Creative book keeping and Yankee lawyers keeps them out of trouble.
Are they making a profit? Hell yes. No profit, No ARRL. Can they
legally hide their profit? Well sure. With all of the books, CD's,
DVD's, tapes and magazines they sell every year you know there is a
profit. They are no different than GoodWill when it comes to making a
profit except that Goodwill actually helps people. ARRL only helps
itself!

We will probably see QST being hawked in Publishers Clearing House
before too long. Get a magazine and win a million

Lessee, just from their website, I've looked up exam dates and
locations, Contest dates and rules, Hamfest dates and locations. I've
downloaded project and info PDF's from them, looked up callsigns and
matched names with callsigns. Looked through the swap section of the
site, and been informed and sometimes entertained by the FCC enforcement
news. Off the web, I've used their hints and kinks books, and I'd be
lost without the Handbook.

And those are just the superficial things, not counting the spectrum
work and really critical stuff such as BPL.

Yup, sure signs of an organization that only helps itself!

Good luck with this one now!

- Mike KB3EIA -

>Newington.

The Section Managers are also elected by the membership of the
Section. In fact, in the Oregon Section we elected one about a year
or so ago and we didn't like what he was doing so we held a recall
election and out he went.

The system works.

In the several years when I was active in Pacific Division politics,
I became aware that there are Division Directors who challenge what
some folks refer to as the "Codfish Curtain". (Right, Hans ??). When
enough of them prevail, policy changes.

Very true.

The 683K number quoted above does not include grace priod licenses, though, only active ones. It also does not include club, military and RACES licenses - only individuals.

This difference sometimes causes confusion because someone will see a number that reflects the entire database including grace period licenses, and then see a later number that does not include grace period licenses. If only 5% of hams don't renew before the end of the grace period, (2-1/2% per year) that works out to over 34,000.

Do you think he was looking so po'd because some grunt decided to piss in
the latrine hole?

We can only hope.

To answer ur question, I suggest we tie him up with leather straps, stake
him out in the sun, and let the Iraqi people put the boot to him.

You do realize that the ARRL has the publication and distribution of QST contracted out, don't you? You should crab to them, not the league per se.

I had similar problems when I was globe trotting, like you. But when I finally did settle down I dropped both QST and CQ a note...and guess what? They sent me every single issue I missed.
Amazing, hu?

Dan/W4NTI

And you are, more or less, the official LHA junior-Unabasher. I want you to be fully aware of your role in rrap, Brian. It goes like this: LHA is the organ grinder, playing a song called "I Left My Heart in ADA, and Newington Won't Give It Back". You are the little monkey in a bright red hat hopping up and down and acting silly for our amusement.

With all best wishes for the recovery of your missing T5 logs,

de Hans, K0HB/4ID

4273. The 14 Petitions

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-15 01:39:25 UTC
From: lenover21@aol.com
Message-ID: <20031214203925.21642.00002939@mb-m01.aol.com>
Source record: 83849

As of the close of Friday, the following 14 petitions had the indicated
document quantities:

RM-10781 321
RM-10782 272
RM-10783 276
RM-10784 254
RM-10785 256
RM-10786 424
RM-10787 674 total 2,477

RM-10805 234
RM-10806 272
RM-10807 178
RM-10808 194
RM-10809 182
RM-10810 181
RM-10811 996 total 2,237 grand total for all 14: 4,714

Everyone can expect some delay in decision-making at the FCC due
to the reorganization of the Wireless Bureau announced recently.

Although the official comment period is over for these petitions, very
few have made "late" comments, therefore the number change for the
bottom 7 is very small and the upper 7 is untouched since last week.

Merry Christmas and a Happy New Year, chatroomers.

LHA

In article <lU6Db.4504$Pg1.632@newsread1.news.pas.earthlink.net>, "Kï¿½HB" <groupk0hb@earthlink.net> writes as if he just had a colorectal examination with a fully warmed-up 100 W American Beauty soldering iron:

>"Brian" <brianburke@juno.com> wrote
>
>> She is, more or less, an official ARRL spam-bot.
>> Wonder if she is an official bulletin station?
>
>And you are, more or less, the official LHA junior-Unabasher.

OLD one, Brian Burke is his own man. He states an opposite opinion from the "official" Newington spin on how amateurism in radio is "supposed to be." Therefore, you, as a Devout Believer in the glory and honor and mysticism of amateurism, must chastise the UNbelievers...and call them "unabashers" for not accepting the legends, mythos, and religious traditions of radio as "officially" stated by ARRL publications.

Somewhere in the past you were often saying "gentlemen can disagree without being disagreeable." You, sir, are being terribly disagreeable, ergo you are NO gentleman.

>I want you to be fully aware of your role in rrap, Brian.

Tsk, tsk, tsk, you should be "aware" of how others see you, OLD man, and that others are quite aware you are NOT the CNO of any rrap party.

>It goes like this: LHA is the
>organ grinder, playing a song called "I Left My Heart in ADA, and Newington
>Won't Give It Back".

"Newington" had absolutely nothing to do with ACAN or ADA, super chief. ARRL had NOTHING to do with any other places I worked in the last half century nor the people I worked WITH from DoD and other branches of the U.S. government. The BoD of a small town club in New England would be lost trying to carry even half the traffic load of the third largest U.S. Army transmitter site in the world 50 years ago. All that the League seems to know is that on-off keying code is the ultimate "art" of radio because that is what they spin off on their membership, covertly and overtly.

>You are the little monkey in a bright red hat hopping
>up and down and acting silly for our amusement.

You are being truly a contentious OLD fart in here, trolling desperately for someone to despise...and then doing a poor job of denigration.

>With all best wishes for the recovery of your missing T5 logs,

And here's "best wishes" for some education that might penetrate a code-warped psyche housing in regards to: (1) voice modulated transmitters of 1906; (2) cell phone differences between power-up and first cell-connect; (3) so-called "one-way" ionospheric radio propagation paths; (4) assorted little gems of radio disinformation that you haven't recognized in the past nor admit to making mistakes on in public.

I've not commented in this subject thread before, only on the 14 petitions before the FCC thread (as its origininator). The NPRM or whatever as a result of those petitions will decide the FUTURE of radio amateurism in the USA. While the REGULARS in the jolly little chatroom of morseaholics are busy puffing themselves up about their marvelous experience and tenure in on-offing the radio waves, the future is sneaking up on everyone. All you are doing lately is just behaving like one of your iceholes in the wintertime.

It's too bad that your Xanax ran out and you switched from ran to rant.

Don't you just HATE it when somebody steps in and ruins your rant?

Merry Christmas and a Happy New Year.

LHA

If they are making a profit, then who is getting the money?? It's got to be going somewhere. There are no stockholders receiving dividends. It doesn't do any good just to sit on the money. And don't say salaries as that is fully documented in the financial records and is not profit. If you believe the salaries are too high, get on the board that makes the decisions and reduce them.

No I am not. However, I have studied the history of amateur radio, etc and
can see the virtues of the ARRL even when I don't necessarily agree with all
their policies.

Obviously, you have other issues too. It doesn't seem as if you can read dates either (and if you were thinking of the European format for dates, then there is no 14th month, so it should have been obvious that such a format wasn't used). You're not off by a month - but by 10; almost a year, and with the number of licensees in that period, the error is significant.

Compare the licensing database against the "Social Security Death Index" and look for matches.

Granted, not every death shows up in the SSDI, but nowadays, more than 95% do.

Perhaps it should. These other license types expire too (and for RACES, they expire permanently). I saw nothing in the original post that should have implied to me that these and the grace-period licenses should be excluded from the count.

> This difference sometimes causes confusion because someone will see a number

Substituting "individual" for "license" would at least have excluded some of those (the CRM's).

Oh yeah...non-profit is the best place to be...And, the greates exploiter of
human emotion, etc. With little effort, the dollars churn in--most people
don't file for the donation they are entitled to (only large donations whose
contributors are also playing the non-profit game).

That's why I'd like to see the tax structure change to some kind of percentage across the board. The *only* entity that would not have to pay any would be a church--and that only for the church building, its parking lot, and its parish. If they've got a private school, nursing home, etc., they pay. And, no deductions for *anyone* or *anything* across the board. Colgate, Mr. Bates, and me all pay the same percentage of tax out of our income; that's it--end of game.

Why limit any exclusion to just the church building, parking lot, and parish? Since churches have been running schools, colleges, homeless shelters, women and youth shelters, food kitchens, youth camps and sports activities, hospitals, nursing homes, and so on, for many years (some long before this country was created and each requiring buildings, land, or equipment), such a limit would have a serious impact on many traditional church activities.

You've become a particularly rude little electrolyte of late, Brian.
You can't expect to change those things which you happen to dislike
about the ARRL from outside it. If you are on the inside, your task is
to convince others to adopt your point of view. I've been a member of
the League for most of my forty years as a ham and a life member for
nearly thirty of those years. The League takes some positions and
actions of which I approve. It also takes positions and actions of
which I disapprove. If one of those seems important enough to me, I
make noise to HQ, to my Director and to other members. Sometimes enough
members make enough noise to change an ARRL position. Sometimes they
don't.

> The ARRL wants to be the -ONE- voice for the ARS.

The ARRL is the biggest and most influential voice within the Amateur
Radio Service. There is clout in numbers. If you've not yet figured

this out, it is time that you learned it.

> I suggest that they
> start with forward thinking leadership representing all, not just
> their CW-centric membership. Or get out of the way.

Get out of whose way--yours? I don't see you as any kind of progressive steamroller with any followers at all. Who are you leading?

The League doesn't issue Notices of Inquiry or Notices of Proposed Rule Making. As to the other items, you've as much as told us that if the majority of League membership doesn't agree with you, you'll take your ball and go home. Then you'll bad mouth the organization.

Sounds like one of Len's typical conspiracy/dishonesty rants aimed
toward the ARRL. I interviewed for a League position years back. The
salary offered wasn't enough to cover a move and life in the greater
Hartford area. While I'm sure that salaries are now better, I don't
think any League staffers are putting up gold-plated Rohn tower and 80m
yagis at their palatial estates.

> It's about your ignorance of what a non-profit really is.

Guffaw!. Her ignorance? I see some gaping holes in your own
database.

With all the dissatisfaction you've expressed, why not start your own organization for like-minded hams? I'm sure you'd amass a following in no time.

We haven't been discussing the board of a small town club in New England. We've been discussing the largest organization of American radio amateurs. Did ADA have a board of directors elected by members of the Army?

I seem to recall you getting blown out of the water on items one through three. I have no idea of what item four means.

What is any of this to you? You aren't a radio amateur. You aren't a member of the ARRL. That hasn't stopped you from huffing and puffing.

Naw, that would be a better description of show business.

>With little effort, the dollars churn in--most people
>don't file for the donation they are entitled to (only large donations whose
>contributors are also playing the non-profit game).

I disagree! Most people I know take the legitimate deductions - small or large.
If you don't, that's *your* problem.
>
>That's why I'd like to see the tax structure change to some kind of
>percentage across the board.

Usually called a "flat tax".

>The *only* entity that would not have to pay
>any would be a church--and that only for the church building, its parking
>lot, and its parish.

OK - who/what defines what a "church" is?

And if the govt. only exempts churches from taxation, isn't that government
support of religion? Why not?

>If they've got a private school, nursing home, etc.,
>they pay. And, no deductions for *anyone* or *anything* across the board.

Is that really fair, or even close to fair?

Is it fair or even close to fair for the person struggling on, say, $25,000/yr
to pay the same percentage tax as someone making $250,000/yr?

Is it fair or even close to fair for the person with multiple dependents, or a
permanent disability (like blindness) to pay the same percentage as someone who
is not so encumbered?

Is it fair or even close to fair for people in places with wage taxes and state
income taxes to pay the same as those in places without those taxes?

>Colgate, Mr. Bates, and me all pay the same percentage of tax out of our
>income; that's it--end of game.

OK - now, what constitutes "income"?

Is it just wages you receive for working, or do benefits paid for you by your employer count too?

How about earnings from investments? How about sales of items you own?

Suppose I bought some radio parts for $10 at a hamfest 20 years ago, brought them home, cleaned them up, tested and fixed them and kept the good ones. I sell them today for $100 - is that $100 to be considered "income"? Or just $90? What about the time and effort I put into them?

If you bought a house or some land 10 years ago and paid $50,000, and next year you sell it for $150,000, how much of that $150,000 should be taxable income?

In the case of corporations, is "income" measured in gross sales or in net profits?

What about 401ks, IRAs, FSAs, etc.?

--

"Flat" taxes sound nice until you get down into the details, and then things get real ugly.

Take away deductions for charitable contributions, and exemptions for nonprofits, and many of them will simply stop operating. Take away deductions for home mortgages and RE taxes, and RE values will tumble because people won't be able to afford as much house. (Foreclosures will rise, too.)

The reality is that most of us would be *worse* off with a "flat" tax because of the side effects.

WHAT I DO NOT UNDERSTAND IS . . .
= = = The 'same' People Who Want Total Separation of Church and State.
= = = Want to Tax Churches and Any Religious Charitable Activities.

I For One Believe That: There Should be Separation of Organized
Church and Organized State. But that there IS the 'personal' FREEDOM
to be a Religious Person 'within' the State Setting. NO Taxation of
ANY Religious Activities or Properties.

The Simple Fast Is: For about 150 Years before the Personal Income
Tax and the Creation of the IRS by the Government of the USofA. The
were NO Laws establishing Taxation of Religious Properties and
Charitable Giving (Restricting Religious Freedom).

If you don't understand it, then allow me to help. The term "separation of church and state" does not appear in the US Constitution, nor the Declaration of Independence. The closest thing to it is in the First Amendment, which starts with my favorite five words:

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof ..."

Only a lawyer could claim not to understand the plain meaning of those words.

Dave

> make any sense then --- still doesn't.

Actually, there *was* a point to it, way back then.

The Technician, as you know, was created and named with the concept
that it would be for those hams who wanted to try out new
technologies. The mindset back then was that "new technologies" =
"VHF-UHF-microwaves" = "lots of time in the shop, not much time on the
air".

This was FCC's idea, btw. They had gotten into a "social engineering"
mindset about 1950 (remember "design for living" and such?) and
thought the Tech would foster development of the ultrahighs.

So when the original Tech was created, it gave privs to 220 and above.
Not only was there no HF but no 6 or 2 either. It's probably not a
coincidence that when the Tech was created there was little or no
manufactured or kit gear meant for hams that covered 220 and above, so
those original Techs were either homebrewing from scratch or
converting surplus to get on the air. After all, a technician
shouldn't need someone else to build him/her a rig, right?

2 meters back then was the most popular ham band above 30 MHz (thanks
to the SCR-522, WERS and Channel 2) so it made sense (to FCC) that
Novices be allowed there but not Techs.

But while the Novice was an instant hit, the Tech didn't get a lot of takers until first 6 and then 2 meters were added. Well into the '70s, the FCC continued to cling to the "Techs aren't communicators" concept. I think it was the widespread use of repeaters by hams that finally ended that idea.

> My point? All these arbitrary differences in operating privileges are just
> that --- arbitrary, based mostly on a misguided agenda of 'social
> engineering' by the regulators.

Exactly! Some of them worked well (like the Novice) and some of them didn't.

And the regulators and would-be regulators like NCVEC are still at it.

Didja know that the whole "Basis and Purpose" business in Part 97 was part of that "social engineering" thing, and was first incorporated into the rules in 1951? FCC wanted it, not hams.

Heheh, what you said, Tom. Good one!

I never cease to be amazed by the disgruntled and their whining.
Especially when they whine about number 7 in the list. Perhaps the ARRL
deos not represent the majority view, (though I believe ARRL does) so if
the whiners who supposedly represent the majority of licensed hams
really want to change things, all they would have to do is join en mass,
elect exactly who they want, and then the ARRL would be "made right" in
one fell swoop.

But then that means they would have to part with that precious money, eh?

But that means they would have to get off their keisters and do
something, eh?

And finally, and what I think is the most important thing, they would
be running the show. Now they the man! Oh oH!

One big thing I've learned in life is that it is a lot easier to
bitch about something than it is to *do* something about it.

It's also a great way of absolving one's self of any guilt or
responsibility.

One of the greatest rules of parliamentary procedure, and a real
cornerstone of representative democracy in gneral is that even though
the majority rules, the minority is allowed to have it's say.

I think waaaaaayyyy too many people these days seem to have forgotten
that. The minority must have it's say.

Dee, I think you are taking a wrong tack on this one. Brian needs his
say, and should not be forced to be a person at a high level of power in
an institution to have his opinion.

Not everyone wants to be active or even *can* be active in an
organization. There are only so many leadership positions.

I'm just campaigning for the elimination of morse code testing.

What is that to you?

You've already passed morse code tests.

You are the ultimate amateur.

You might have been a professional once, but you could not even
get a job with an amateur organization.

No wonder you are so bitter.

Quit trying to sound like a Ba'athist amateur, Klunk.

The League (of Notions) MAKES MONEY on the publication side
of their conglomerate of control.

Ads in QST pay for everything in the QST staff and the cost of job printing and fulfillment (publication talk for mailing/distributing).

The "non-profit" stuff and nonsense is for lowering their taxes.

You need copies of their IRS forms from 2002 and previous years? Those are on the Internet.

>I interviewed for a League position years back. The

Translation: You were rejected. (boo hoo for you)

> While I'm sure that salaries are now better, I don't
>think any League staffers are putting up gold-plated Rohn tower and 80m
>yagis at their palatial estates.

Rohn filed for bankruptcy on account of that?

You can see the top five staffers' salaries given on their 2002 IRS forms.

>> It's about your ignorance of what a non-profit really is.
>
>*Guffaw!*. Her ignorance? I see some gaping holes in your own
>database.

Nooo, Klunk, "non-profit" is a status to claim for paying LESS taxes.

If you are foolish enough to believe that W1AW's station, the "museum" and all the other paraphenalia came out of dues, you've got a database gap large enough to sail the USS Enterprise through.

>With all the dissatisfaction you've expressed, why not start your own
>organization for like-minded hams? I'm sure you'd amass a following in
>no time.

Three-fourths of all licensed U.S. radio amateurs are NOT members.

That should be evidenciary. To all but the minority who are members.

Members "KNOW what is good for all the others" and therefore they are the elite.

The League (of Notions) still holds on vainly to the idea that morse code is still the ultimate of amateur skills...long after the rest of the radio world has given it up, discarded it for communications.

Continue to be the acidic spam-bot for the League (of Notions), old Klunk. You have taken a Ba'ath...but are yet unclean.

>
>The FCC spoke. And what they spoke was not ARRL majority opinion.
>
>What do you make of that, Dee?

Three fourths of all U.S. licensed radio amateurs are NOT members.

Dee, as a devout baathist believer in the league of the nation, thinks
that one fourth is a "majority." Belief can cloud thinking.

The League (of Notions) has been busy propagandizing amateurs
for no less than 89 years...ever since they were formed as a way
to hack Western Union and other telegram businesses.

Constant, repetitive propagandizing is known as the "Big Lie"
technique. Those who want to Believe WILL. Those will adopt
that credo as their code of life and God forbid those who say
against their Beliefs.

Problem is that Believers are in the minority...but they cannot ever
see that or they are so set that what they think is the absolute
"they know what is best."

That's why the staunch Believers insist on morsemanship as the
Ulimate in amateur akill...even after the entirety of the rest of the
radio world gave up on morse codes for communication. "They
KNOW what is best" therefore their way MUST triumph.

Incredible that there's such a similarity of the League (of notions)
to the Ba'athists in Iraq.

Anyone for a deck of cards?

Why? Can't or to lazy to learn the code? Is that the only way you will ever be able to get a ham license? I guess if they remove the code requirement you will campaign to get the written eleminated also so you won't have to do anything for a license. I haven't belonged to the ARRL in many years, but you have convinced me I need to join, thanks to you the ARRL will get a new member.

There you show how out of date you are. In recent years, the ARRL has
shifted to a neutral stand on CW. Their efforts have indeed been centered
on more important issues. What policies do you think the ARRL should be
focusing on? They have to pick and choose. And again they have to pick the

issues that the majority of their members want not the minority and not non-members. If they don't, they'll be voted out of office and someone will be put in who will do it that way.

Ok where is the money going?? You said they dump it into salaries thus
implying that said salaries are artificially inflated and then indicate that
you don't think the salaries are too high. Which is it? Facts please, not
emotional innuendo.

If we are going all the way on separation of church and state, why should
they get any special status beyond what other non-profit organization would
get?

Mike, I agree with what you have said. Everyone should be free to voice their opinion.

But what we cannot forget that to get a change, someone has got to buckle down and do the work. That should fall upon the person or persons who want the change to either do the work themselves or to convince someone to lead this effort for them. Whining and complaining doesn't get the job done. Brian seems to think that his opinion as expressed in a couple of letters to the ARRL should have caused them to adopt the policies that he likes. That's totally unrealistic. If he's not willing to do the work, then he has no business slamming the ARRL.

Big deal, they didn't kill him and he was too big a pussy (surprise)
to kill himself.

Now we'll waste money giving him a trial. Great.

Jim:

The answer is obvious. Extract as much intel out of him as possible, then turn him over to the new Iraqi government for his fair trial and subsequent execution. I just hope it is televised, and the method chosen is hanging. And not the modern, trap-door on the gallows floor, neck snaps and you're instantly dead kind -- I want to watch him do the rope dance. He should be winched up to the top of a very high tower and left to hang there long enough for every Iraqi citizen to see him there. I generally don't believe in capital punishment, but I can gladly make an exception in his case.

A lot of us (including me) used the Tech as an incremental
stepping-stone to the General after our Novices ran out - the
closest thing to a CSCE before the VE system got approval to use the
latter. I kept mine for 10 years before I got my General (but
several things like undergrad and graduate school and finding a
steady job needed my attention more than practicing Morse).

Techs on 2 were very active in NY and LA in the very early 60s.
Southern California even had 2-m repeaters by then (AM, of course).

Thanks for the accolades, Len but I'm just one U.S. radio amateur among hundreds of thousands.

> You might have been a professional once, but you could not even
> get a job with an amateur organization.

Yes, I was a professional in radio for quite a number of years. I don't use that as a pulpit from which to lecture radio amateurs. You do and you aren't even involved.

If you've been paying attention, I was offered a job with the ARRL. I turned it down. Are you playing loose with facts again?

> No wonder you are so bitter.

I think you must have me mixed up with you. I'm a radio amateur. You are a bystander.

One fourth, a sizeable number, ARE members. There are also Associate
Members who are not licensees. You aren't a Full Member nor are you an
Associate Member.

> That should be evidenciary. To all but the minority who are members.

So, to see if we have your latest yarn straight, ARRL members aren't
aware that there are others who are not members?

> Members "KNOW what is good for all the others" and therefore they
> are the elite.

Other than you, who issues such statements? What is any of this to you
as an outsider to amateur radio and the ARRL?

> The League (of Notions) still holds on vainly to the idea that morse
> code is still the ultimate of amateur skills...long after the rest of the

But, Len, you think you know what is best for amateur radio and you aren't even involved. You're pretty much of a minority.

You claim to know what is best for amateur radio. Your comments above do not address morse testing; they address morse USE. What is it to you, a fellow with no stake at all in amateur radio, if radio amateurs continue to use morse?

> Incredible that there's such a similarity of the League (of notions)
> to the Ba'athists in Iraq.

Really? Your comment seems pretty flakey to me. The Ba'ath Party supports continues use and testing of morse code?

> Anyone for a deck of cards?

I'd give you a deck but you couldn't cut it.

I don't give, and I don't have a problem. But, for example, on tonight's radio broadcast of one of NPR's shows, a lady guest said that donations to charities are up over last year and averages at +/- $2,500.00 per family. I can state as a matter of fact to you that I know at least 5 families off the top of my head who give nothing. So, someone's picking up that average from somewhere. I think "charitable" organizations are a good thing--but I also think there's a lot--a LOT--of abuse from within them.

Well, we the People do, I would imagine. So, it would be defined by the eligible voters who bother to vote. If eligible voters who bother to vote don't like the idea, then it doesn't fly. I'd be a supporter of my way of

thinking, of course :)

>
> And if the govt. only exempts churches from taxation, isn't that

Giving churches a break from taxation is as close to having government support religion, too. So, neither way particularly exempts one from being able to argue that our government supports religion.

>
> Is it fair or even close to fair for the person struggling on, say,
$25,000/yr
> to pay the same percentage tax as someone making $250,000/yr?
>

Yep. Because right now, the person making $25,000.00 annually is likely paying more taxes because the person making $250,000.00 annually can avail themselves of all kinds of tax breaks and loopholes.

>
> Is it fair or even close to fair for the person with multiple dependents,
or a

Yep. Why should a person's abilities determine what tax they pay? Is there a deduction right now for a lack of abilities? One thing I think ought to be done away with is elderly folks paying school taxes. It's ridiculous.

>

I'm not so sure he is, Dee. I see a person that disagrees with some of what the ARRL is doing, yet still supports the basic objective. I mean if he's been a member since 86, that counts for something.

Kind of like how I am with politics. The Dems are in shambles, and the Repubs are waaaaaayyyyy too liberal any more with their way out of line deficit spending.

But I still vote, and try to pick the least awful candidate.

Amateur Radio Newsline™ Report 1374 – December 12, 2003

LISTENER ADVISORY: PLEASE ASSIST IN THIS SURVEY

This is directed only to those who are not currently ARRL members.

Amateur Radio Newsline has agreed to help compile a survey which seeks answers for these two questions:

1: If you are not a member of the ARRL, why not?

2: If you were a member of the ARRL and quit, why?

If you are already an ARRL member, please do not reply as those conducting the survey only want to hear from those hams who never joined or who have dropped their membership.

Please respond by e-mail to hamvideo@juno.com before December 18th. And we sincerely thank-you for assisting in this survey. (The Producers)

**

Amateur Radio Newsline report number 1374 with a release date of Friday, December 12 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new study says that the Executive Branch should take over the duties of the FCC, hams in Australia could loose part of the 70 centimeter band and the K-6-D-U-E commemorative event is finally on the air from space. Find out the details on Amateur Radio Newsline report number 1374 coming your way right now.

(Billboard Cart Here)

**

RADIO POLITICS: STUDY SAYS WHITE HOUSE SHOULD REGULATE RF SPECTRUM

A new study says that its time for the White House to replace the FCC as the nations regulator of the airwaves. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, is here with the story:

--

The Center for Strategic and International Studies is a private research organization that analyzes global issues. And in a recent report, it basically posed the rhetorical questions of -- what if the FCC went away -- and -- what if the Executive branch of the federal government -- the White House -- took over management of the nation’s airwaves?

Would it be better or worse for America? The Center says yes. That in its view, such a change would definitely improve the way the finite resource called electromagnetic spectrum is managed, but critics have their doubts. One told Amateur Radio Newsline: -- quote -- “You think the spectrum management is bad now, put it under the executive branch” -- unquote.

Be that as it may, the Center’s report called Spectrum Management for the 21st Century was recently presented to Representative Tom Davis. Davis is chairman of the House Committee on Government Reform and the report recommends a number of steps to stop what the think-tank describes as the increasing number of fights over existing spectrum space.

Among its recommendations are to develop a national spectrum strategy. Increase research support for technologies that make better use of the spectrum and the controversial one. Establish a spectrum oversight advisory board to implement full White House control of all spectrum related matters.

Davis said his committee will weigh the report’s findings, along with the results of five ongoing General Accounting Office reviews and a Presidential Spectrum Policy Initiative study commissioned last June. With all of this information for Congress to gather and digest, any change in who will regulate the nations spectrum is probably years, if not decades away.

With thanks to KC0DGY for bringing this to our attention, I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

Currently, the Federal Communications Commission oversees commercial use of the electronic magnetic spectrum while the National Telecommunications and Information Administration handles all aspects of government use. Its far to early to speculate on what effect -- if any -- such a change might have on Amateur Radio.

More information can be found on-line at http://www.gcn.com/vol1_no1/mobile-wireless/24166-1.html (KC0DGY, GCN)

**

INTERNATIONAL - VK: 20 - 430 MHZ AT RISK IN VK-LAND

Australian hams may loose access to all of 420 through 430 MHZ. This, as demands in this part of the spectrum by non-amateurs increases.

Q-News reports on an e-mail from the Space & Terrestrial Systems Team at the Australian Communications Authority to the Wireless Institute of Australia’s Federal President Ernest Hocking, VK1LK, last Tuesday. It deals with an amendment that was made to the Australian radio regulations recently that prohibits the operation of amateur stations in the frequency band 420-430 MHz in certain locations. This, to minimize the risk of interference to that nations Fire Brigades Network and the Mobile Data Radio Service emergency services that operate in this frequency band.

VK1LK told Q-NEWS that he will continue to adopt the view that the Wireless Institute of Australia is looking for primary allocation in the 430 to 440 MHz

band -- or at least some part of it -- to protect ham radio interests. (Q-News)

**

INTERNATIONAL: BIG HAM RADIO EDUCATIONAL SUCCESS IN ALBANIA

Success reported for 33 students in an internationally sponsored Albanian Amateur Radio training project. We go across the Atlantic to Jeremy Boot, G4NJH, is in Nottinham the UK for the latest:

--
The following update on the unique amateur radio training course that is ongoing in Albania has been sent in by Martti Laine, OH2BH, in Tirana.

"A memorable second week came to an end when the US ARRL delegation headed by K7WX and K9LA departed Tirana with many fond memories and new friendships taken back home”

"The theory exam was conducted on Wednesday the 26th of November with 33 students gaining a pass at the CEPT 1 level. Now the course will move on to pure amateur radio related subjects under the leadership of Uli, DJ2YA, while John, G3OKA, will head back to the UK after a job well done.”

Britain's RSGB deserves credit for their support of the first part of the program. I’m G4NJH, in Nottingham.

--

Another wave of lecturers representing Finland and Germany has now arrived. Also, Albanian authorities have released the callsign ZA1UT. This is an acronym for the 'University of Tirana and is meant to assist in commemorating this extraordinary ham radio educational program. (GB2RS)

**

HAM RADIO IN SPACE: K6DUE OPERATING EVENT UNDER WAY

The K6DUE International Space Station Commemorative Event from the International Space Station is finally under way. What’s described as a challenging schedule kept the crew from getting on the air November 29th and 30th, but the ISS ham station was active during a pass on Saturday, December 6th. We have more in this report:

--
According to ARISS International Chairman Frank Bauer, KA3HDO, numerous hams across North America and Europe were able to contact with Astronaut Mike Foal, KB5UAC or heard the ISS ham radio station downlink. Those who did qualify for a special ISS Commemorative Certificate. Information on obtaining one is on-line at www.rac.ca/ariss

KA3HDO also reports that the Phase 2 equipment setup has been completed and the gear activated at approximately 11:20 UTC on December 8th. The new radio is a Kenwood D 700 dual band transceiver. It appeared to operate flawlessly but the packet operation was turned off after Russian controllers requested that the

crew power down the hardware while bilateral safety paperwork coordination is being completed. Bauer says that hopefully, this will be completed quickly and that the long awaited packet operation will be on the air once again.

For the Amateur Radio Newsline, Norm Seeley, KI7UP.

--

The event commemorates the contributions of the late Roy Neal, K6DUE, to manned ham radio space operations and continues through the end of the month. (ARISS)

LAW: HIGH TECH MUST FIGHT CYBERTERRORISM

The Federal government says that technology companies must cooperate in the battle against cyber terrorism. This, according to Homeland Security Secretary Tom Ridge who said that the alternative is to submit to government imposed security regulations.

Speaking at a recent two day conference sponsored by his agency, Ridge said that the enemies of freedom use the same techniques as hackers do and the nations industries must be as diligent and determined as the hackers."

The two-day conference was the first formal brainstorming session to draft security guidelines and a cyberspace attack warning systems. (Published news reports)

**

ENFORCEMENT: FCC AGAIN WARNS AERO ENTHUSIASTS ABOUT UNLICENSED OPERATIONS

The FCC is once again warning several hang gliding and sky-diving enthusiasts and the operators of a number of training facilities about the use of ham gear by unlicensed persons. Bruce Tennant, K6PZW, reports:

--

In a letter to sixteen such California based flying groups, the FCC’s Riley Hollingsworth says that the Commission is receiving an increasing number of complaints that users of these facilities are operating Amateur Radio equipment without a license. Hollingsworth specifically notes the use of hand-held radio transceivers as the biggest violation.

Hollingsworth says that while the FCC encourages the use of radio equipment for the safety of flyers, there are numerous alternative radio services that do not

require a license. These include the Family Radio Service and the Multiple Use Radio Service.

Hollingswoth adds that the use of Amateur Radio Transmitting equipment is also permissible as long as the users -- in this case the pilots and sky-divers -- are licensed in the Amateur Radio Service. Translated, they must have a ham ticket to put an Amateur band transceiver on-the-air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Hollingsworth's letter tells the groups that the use of radio transmitting equipment in a service where a license is required, without obtaining a license, is a violation the Communications Act and will result in criminal penalties. He says that fines normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: HOMEOWNERS ASSN MUST FIND INTERFERENCE

And a big win for a Pennsylvania ham that could be precedent setting. The FCC has written to the lawyer representing the Pine Ridge Community Association in the city of Stroudsburg. The note informs the counsel that his interpretation of the Community Association's obligations under Part 15 was incorrect and that the Association is required to investigate the source of its radio frequency interference to an Amateur licensee residing within the Association's property. (FCC)

**

AT THE FCC: CHANGES AT THE CGB

Still with the FCC, word that Louis J. Sigalos has been named Chief and Sherry Dawson has been named Deputy Chief of the FCC's Consumer Affairs and Outreach Division of the Consumer & Governmental Affairs Bureau. This bureau is responsible for conducting outreach to the American public on a broad array of telecommunications issues including the deployment of broadband services, the transition to digital TV, wireless phones and services including local number portability and much more. The Division also promotes public awareness of the Commission's strategic goals and initiatives through consumer advisories and fact sheets, consumer forums and participation in conferences and workshops. (FCC)

**

CHANGING OF HE GUARD: JULIAN HIRSCH

Some sad news. Famed technical writer Julian Hirsch, W2KFB, who spent most of his life testing the latest developments in stereo equipment and explaining them for Stereo Review magazine has died.

Hirsch was a graduate electrical engineer from Cooper Union University. He and Gladden Houck created the Hirsch-Houck Laboratories to test electronic equipment in 1957.

Hirsch went on to author more than 4,000 reports on stereo systems, speakers, turntables and other equipment until his retirement in 1998. He was 81 when he passed away on November 24th. (LA Times, other published news reports)

**

HAM EVENTS: HRU 2004 ON LONG ISLAND NY

Mark Sunday, January 18, 2004 at 8AM, for the fifth annual Ham Radio University. The event is being held at the East Woods School in Oyster Bay New York with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be hands-on with many demonstrations on just about everything including ham radio satellite communications, low power operating using radios as small as a tuna tin and the latest in emergency communications. There will also be a testing session for those who would like to take an FCC exam.

Again this year, Ham Radio University will be combined with the ARRL New York City and Long Island Section Convention. Talk-in will be provided on the W-2-V-L repeater on 146.85 MHz and using an access tone of 136.5 Hertz. For more information e-mail n2ga@arrl.org (K2EPM)

**

INDUSTRY NEWS: FREE SUB TO THE UNEMPLOYED FROM ATVQ

If you are out of work and would like to have something to read, has Amateur Television Quarterly Magazine got a deal for you. How about a free one-year subscription to their flagship magazine?

To qualify, you must be normally employed and not retired. Also, the offer is limited to the first 100 to apply.

To take advantage of this one time offer, send a letter by U-S mail requesting a free subscription and stating that you are temporarily out of work. The address is Holiday Offer - ATVQ, 5931 Alma Dr. Rockford, IL 61108.

Sorry, the magazine will not accept e-mail subscriptions for this one time offer. (ATVQ)

**

INDUSTRY NEWS: JVC TO CLOSE US VHS TAPE PLANT

A not so happy Christmass for some employees of JVC America. This, as the company announces that it will shut down its VHS tape production plant in Tuscaloosa Alabama by January 31st.

The reason given for the closure is the loss of the VHS market to Digital Video Discs. About 115 people will be laid off from the VHS tape plant closing. JVC already has compact disc and DVD plants in Tuscaloosa and Kennesaw, Georgia that employ about 550 people. (KB4KCH)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ARNEWSLINE(TM) NEWS: WE THANK YOU

I'm Andy Jarema, N6TCQ with a list of people to thank.

It's been since March that we did this, and we were in big trouble financially at the time. The following is only the first half of who helped us in April:

George Jacobs W3ASK of Silver Spring, MD. He's the former Propagation and Space Communications Editor of CQ Magazine.

Benton Bonney, W4PE of Orlando

David Ziskind, KE4QLH of Atlanta

Joseph Bartzi, Jr., KC8DKF of Wadsworth, OH, who since became a recurring contributor

The Hiram's Ham Amateur Radio Society of Reynoldsburg, OH

Donald West, W9DEW of Fortville, IN

Paul Lebzelter, K8PFL of West Branch, MI

Michael Leahan, N9PQK of Sun Prairie, WI

Gary Harrison, K0BC of Bolivar, MO

Kent Stutzman of Newton, KS

George Ancell, N5LEZ and B&G Communications of Electra, TX

That wasn't everybody in April- we'll continue trying to catch up in the weeks that follow.

Finally, in the entertainment industry, oftentimes one of the biggest stars is listed at the end of the opening credits, such as: "and starring Martin Sheen as President Bartlett."

We at Newsline also have one of those: "and starring Roy Blanchard, N5YHS,” as an occasional, but extraordinary benefactor. Roy, you're amazing!”

Thank you to everyone. Your April response to our crisis was exceptional, and got us all the way to December. We promise to do our best to continue to earn your care and support.

A reminder that Newsline is a 501(c)(3), federally chartered, California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org.

I'm Andy Jarema, N6TCQ.

**

ON THE AIR: 6 METERS IS BIG IN KNOXVILLE

If you live near Knoxville Tennessee and like to operate vintage ham gear, listen up. This one is for you.

The Repeater Journal reports that a group of local hams have gone back to the future and created a new Six Meter Nostalgia Net that meets on 50 point 4 Megahertz -- or should we say Megacycles in this case. The gathering takes place every Thursday night at 8:30 P.M. local time and anyone with gear capable of running full carrier A-M is invited to take part.

And what if you are not into A-M operation? Well the same group also sponsors F-M and S-S-B nets on Sundays. The F-M gathering takes places at 9 P.M. on the 53.770 MHz repeater. Five minutes after the F-M net is secured the S-S-B net takes to the airwaves on 50 point 200 MHz.

And if that’s not enough, yet another Knoxville area 6 meter F-M net has just started up on the 53 point 610 MHz repeater. It meets on Thursdays at 8:00 P-M local Eastern U-S time. (Repeater Journal)

**

EMERGING TECHNOLOGY: RADIO RESEARCH: NAVY AND AIR FORCE AGREE ON NEW JOINT COMMUNICATIONS SYSTEM

The Air Force and Navy have agreed to merge their two formerly separate programs for the acquisition of improved radio systems. The result will be the development of a single family of radios designed to replace incompatible units in use across the services.

Called the Joint Tactical Radio System, this joint Air Force-Navy initiative is expected to produce more than 17,000 units. Initial deliveries of the new radios are expected to begin in late 2008. (Science OnLine)

**

INTERNATIONAL - CANADA: VE9HC RE-ELECTED

Radio Amateurs of Canada reports that Hugh Clark, VE9HC was recently re-elected Section Manager in the Maritimes Section. This, for a two-year term that will begin on March 1st, 2004. Clark ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL - IRAQ: BAGHDAD COMES TO ECHOLINK

Ian Abel, G3ZHI, reports that Iraq is now on Echolink. Ian says that on December 4th he held a 90 minute cyberspace QSO with YI1SRA in Baghdad using the Echolink program. Laith was operating from an Internet cafe as full Internet access has yet to be widely restored in the city.

YI1SRA reported that he and fellow members of the Baghdad Radio Club are hoping to install a 2 meter repeater in the city. It would be linked to Echolink network allowing on demand around the clock contact with the city and provide communications back home for any foreign ham in Baghdad.

YI1SRA also now has e-mail. Messages to him go to laithtariq@yahoo.com (G3ZHI)

**

DX

In D-X, now its your chance to QSO the real Santa Claus on the air. This, as station OH9SCL is active from Santa Claus Land near the Arctic Circle. OH9SCL will take to the ham radio airwaves from December 17th through the 21st. Operation will be 80 through 10 meters on cw, ssb, rtty, psk31 and slow scan television. The digital modes will be primary focus durning the weekend hours. Santa’s ham radio helpers this year include Finnish amateurs OH2BH, OH2NWG, OH3BHL and several others. QSL via OH9UV. (Via e-mail)

Meantime, the ARRL says that its new Logbook of the World secure contact-verification database continues to grow. ARRL Membership Services Manager Wayne Mills, N7NG, reports that nearly 5000 users have uploaded logs containing some 25.4 million Amateur Radio contacts. This has resulted in more than 1 million QSL records to date. (ARRL)

**

THAT FINAL ITEM: BRINGING THE DEAD BANDS BACK TO LIFE

And finally, its that time of year that the V-H-F frequencies are pretty dead as far as propagation goes. So here's as idea from Terry Hosack, W-A-3-L-T-B, on how to bring them to life.

Terry suggests over the V-H-F Reflector that you download a copy of the W-S-J-T program for digital high speed meteor scatter, weak signal, trop and E-M-E. He says to be certain that you get all the current updates including the new JT65 mode.

Hosack says that other than skeds, activity may be found on 144.140 and 50.260 Mhz mainly during contest and activity periods. If you are on the East Coast just beam west. Conversely, if you live out West, beam to the East and you might be surprised at what you might hear.

Terry says to just put the program in the monitor mode and see if you can decode any signals. If you find an interest in the mode you can buy or build an interface to actually transmit and help bring the dead VHF bands back to life.

The following web site is used for Skeds and chat about WSJT and meteorscatter: http://www.pingjockey.net/cgi-bin/pingtalk (VHF Reflector)

This is an assertion that has proven to be false over and over
again, Anderscum...so why do you keep making it?

> What is that to you?

What's ANYTHING about Amateur Radio to you?
>
> You've already passed morse code tests.

You've passed NO Amateur Radio tests of ANY kind. No license =
No practical experience.

> You are the ultimate amateur.

You're not much of anything...You're an "ex" of many things, none
of them mastered, it would seem.

> You might have been a professional once, but you could not even
> get a job with an amateur organization.

Ditto you, Lennie.

> No wonder you are so bitter.

Double ditto. And a very ugly, DECEITFUL kind of bitter, at
that.

Very little of Brain's "commentary" has anything to do with the
ARRL. Most of it has to do with uncorroborated claims of achievements
in Amateur radio.

> Somewhere in the past you were often saying "gentlemen can
> disagree without being disagreeable." You, sir, are being terribly
> disagreeable, ergo you are NO gentleman.

I guess it's a relief that YOU have never made such a claim, ergo
we can dispense with any ideas of what kind of gentleman YOU are, eh,
Lennie?

> >I want you to be fully aware of your role in rrap, Brian.
>
> Tsk, tsk, tsk, you should be "aware" of how others see you, OLD

I understand he's delegated the duty
of that esteemed 20M ham radio tradition to a
certain station from Georgia who lives on
14.313 on a 12/7 daytime basis. Check on
the 25th in the morning when I am sure all
the whole gang will be on there as usual
like on the weekend knucklehead show.

>
>You claim to know what is best for amateur radio.

Nope.

>Your comments above
>do not address morse testing; they address morse USE.

Poor baby, you still don't understand the relationship?

PCTAs have constantly whined and bitched about "removing the
morse test will end the use of morse!"

>What is it to
>you, a fellow with no stake at all in amateur radio, if radio amateurs
>continue to use morse?

What is it to you...who will never ever have to take any sort of
amateur radio test again in your lifetime?

Will your paddles freeze if the morse test is removed?

Will you be struck dumb if the morse test is removed?

Will you lose your valued arrogance and superiority if the morse
test is removed?

>> Incredible that there's such a similarity of the League (of notions)

What "facts" Ripley? You made a CLAIM. An UNSUPPORTED
CLAIM.

Get someone to vouch for your "job interview," someone in the
League who was there at the time.

I'll be generous and accept State Department notification (if on
official letterhead stationery). :-)

Or, knowing State, on their official stationary...

>> No wonder you are so bitter.
>
>I think you must have me mixed up with you. I'm a radio amateur. You
>are a bystander.

Nope. I've been IN RADIO longer than you have, done more in radio
and electronics than you have. I'm a PROFESSIONAL.

Been a professional in radio longer than you have, too. :-)

Now, did you have some comment on morse code test retention and
"how that so terribly affects your ability to perform as an amateur?"

I'm sure that anyone daring to express the thought that the morse test
should be eliminated gives you the terrible shivers as an amateur.

We can't have Kolonel Klunk getting emotionally upset, can we?

I can, I did learn morse. I don't see the need of it after being in
radio communications for 50 1/2 years.

>Is that the only way you will
>ever be able to get a ham license?

An AMATEUR license is not one of my life priorities. I've had a
COMMERCIAL license for 47 1/2 years.

>I guess if they remove the code
>requirement you will campaign to get the written eleminated also so you
>won't have to do anything for a license.

No. You are starting to show evidence of high irritation, anonymous
one.

Why is it imperative to have a license, especially an AMATEUR
license? I took my FCC office test way back in March, 1956. I'd
already been communicating in the HF Big Leagues for three years.
Later on, I've communicated on LF, MF, HF, VHF, UHF, and
microwaves without needing any amateur radio certificate. Never
ever needed to use or understand morse code for any of that.
Nobody involved in all that communicating complained about
lack of morsemanship.

>I haven't belonged to the ARRL
>in many years, but you have convinced me I need to join, thanks to you
>the ARRL will get a new member.

Go for it. They need warm bodies rather desperately. The League
has yet to get membership from a majority of licensed U.S. radio
amateurs.

Hurry on getting your membership...wonder upon wonders, they are
defraying shipping charges on items puchased from Newington right
now! [of course, you pay the same price in a ham store for ARRL
merchandise and there's no shipping charges to pay...]

As of the end of Friday there were 5,121 documents under the
BPL NOI 03-104.

You are free to search through ALL of them to find out who said
what. Everything out in the open.

By the way, FEMA radio use is under the regulation of NTIA. It is a
government entity.

My comment is in that database. Is yours? Or do you want to sit
back and let the League of Notions handle everything for you?

Good luck on this one, now.

Well, that's certainly one way to go, and W4NTI's is another.

Seems to me that since most of his crimes were against the Iraqi, Kuwaiti and Iranian people, *they* should be the ones to judge him (after all possible intel has been obtained, as you say.) If done right, the USA could gain much credibility in the region by *not* being too involved.

In no particular order:

1) Representation of amateur radio (what other organization or individual would do anyhting like the 121 page commentary on BPL?)

2) QST and other publications (only the RSGB Handbook is comparable)

3) Contests and operating activities (particularly SS and FD)

4) Product reviews (much more in-depth than any other amateur publication)

5) Elected officials (they listen even if they don't agree)

6) W1AW (been there and operated the station, too)

Great, then go back to your LF, MF, HF, VHF, UHF and microwaves with
your commercial license. You obviously have no interest in amateur radio
so it is obvious to the most casual of observers that your only reason
to be hear is to see how big a jackass you can make of yourself.
And you're doing a bang-up job of it.

It will give me a say in campainging to keep the code test, looks like
that is what keeps you out of ham radio and that's a good thing for ham
radio.

> organization would get?

There is very little special special status involved. Every non-profit organization can write off the costs for buildings, land, facilities, equipment, personnel, and so on. Any remaining special status, and again there is very little, is covered by the "free exercise thereof" clause of the First Amendment - "Congress shall make no law respecting the establishment of religion, or prohibiting the free excercise thereof..."

In my opinion, we cannot "go all the way on separation of church and state" without violating the "free excercise thereof" clause. If anyone were to argue to ignore the "free excercise thereof" clause, others could just as easily argue to ignore the "establishment of religion" clause. Luckily, both clauses exist and people who truly believe in the Bill of Rights should honor and defend both. Many people are not doing so today.

I'm somewhat uncomfortable with that, Dave. As I see it, when discussing a radio service which uses the radio frequencies that belong to all Americans, no American Citizen who wants to be involved is a bystander and all (Amateur and non-Amateur) have a right to be involved in the discussion. Likewise, I saw nothing in rules of this newsgroup which would restrict the participation of non-Amateurs. You may not like what Len has to say, but the lack of a Ham license alone should not diminish it or dismiss it.

Of this minority, the ARRL polled their little group in the mid-late
nineties, and came away with "no clear mandate." An even spilt within
the ranks of the true believers? So even at the time, something was
wearing away at the propaganda machine. I wonder what's happened
since then?

Now you've got hams kicking around the idea of a two license structure
w/o Morse Code for HF access.

Or put yet another way, probably quite closer to the truth, is that
he's paid his dues and likes it just fine.

If you don't like the ARRL, that's fine. You don't have to be so bitter
about it, though!

I'm not at all uncomfortable with it, Dwight. Len has had his say on countless occasions. He isn't involved with amateur radio though he knows some hams. He has no background in amateur radio from which to make an informed decision regarding amateur radio testing. He wants morse testing ended. Based on what special knowledge and background? He wants a minimum age for amateur radio licensing. Based on what special knowledge and background? His right to direct his opinion to his government is intact. Government is not forced to agree with his assessment of how amateur radio should be changed. I'm certainly not forced to agree with his views, to respect his views or to refrain from sarcasm with regard to his views. Wanting to be involved does not make Len other than a bystander in the world of amateur radio. He is not a part of amateur radio simply because he comments to government or because he posts here.

> Likewise, I
> saw nothing in rules of this newsgroup which would restrict the
> participation of non-Amateurs.

Len has participated and participated and participated. He wants to participate and to prevent others from laughing at him or his ideas. Others are free to participate and may form their own opinions of LHA's ideas. They are free to laugh at his ideas, to poke fun of his ideas and to counter his ideas.

> You may not like what Len has to say, but the
> lack of a Ham license alone should not diminish it or dismiss it.

There's no "may" involved. I don't like what Len has to say and don't care for his windy, pontificating and condescending posts. If you've read Len's stuff, you'll have no difficulty in understanding that his lack of an amateur license is not the only reason for making light of his opinions regarding amateur radio licensing.

OK.

But I do give, and you want to take away *my* deduction for doing so.

> But, for example, on tonight's
> radio broadcast of one of NPR's shows, a lady guest said that donations to
> charities are up over last year and averages at +/- $2,500.00 per family.

That's pretty much a meaningless number all by itself.

> I
> can state as a matter of fact to you that I know at least 5 families off the
> top of my head who give nothing.

Another meaningless fact.

> So, someone's picking up that average from
> somewhere.

Could be anywhere, and unless we know how the average was computed, it
means very little if anything.

For example, if we take a sample of 400 families, and just one of them donates $1 million, and the 399 others donate absolutely nothing, the *average* donation is $2500 per family.

Or if one-third donate nothing, one third donate $2500 and one third donate $5000, the average is still $2500.

> I think "charitable" organizations are a good thing--but I also

Are Wiccans a church?

Could atheists form a church?

> > And if the govt. only exempts churches from taxation, isn't that
> > government support of religion? Why not?
>
> Giving churches a break from taxation is as close to having government
> support religion, too.

The govt. gives all charitable organizations a tax break. Therefore, it is charity, not religion, that is supported.

> So, neither way particularly exempts one from being
> able to argue that our government supports religion.
>
See above. The Ronald McDonald House is not a church but it gets a tax break. You would take that away.

That's simply not true.

What "tax breaks and loopholes" exist for the $250K person that do not
exist for the $25K person?

> > Is it fair or even close to fair for the person with multiple dependents,

> Whatever the IRS considers as income...the total taxable income that is
> reported on a W-2--and that's determined by IRS rules, which ultimately, I
> suppose are determined by we the People (yeah, right, but you get the gist).

If it's OK to use IRS' definition of income, why not IRS' definition
of exemptions and deductions?

IRS says I can put money in a 401K, IRA, FSA and some other places and
it doesn't count immediately as income. Growth in certain investments
(Roth IRAs, some municipal bonds) isn't considered taxable income by
IRS either.

So the person who puts lots of $$ into those things can pay less than
the person who doesn't.
> >
> > How about earnings from investments? How about sales of items you own?

Once in a while.
>
> >
> > If you bought a house or some land 10 years ago and paid $50,000, and next
> year
> > you sell it for $150,000, how much of that $150,000 should be taxable

> income?
> >
>
> What's the IRS say?

It's taxable unless certain exemption rules are met. For example, if
it's your principal or secondary residence and you reinvest the money
in another principal or secondary residence within (I think) 2 years,
it's not taxable. (There are other exemption rules). In other cases
it's taxable (if it were not your principal or secondary residence,
for example).
> >

Do you really think it would reduce your taxes? Get real!

Besides, it's a fantasy to think that there'd ever be widespread
support for flat taxes. Too many average people would lose too much.
Including you.

Not so, now a days if you do misbehave hardly anyone will catch it. Most
folks don't know enough CW to do more than a canned qso.

I suspect a lot of that is because of 'readers'.

Nah....capturing the rat alive is by far the best solution. Now we can give
him a front end alignment and adjust his attitude. Get all the info we can,
then give him to the Iraqi people.

They will then give him a trial, and kill him on July 1, 2004.

Now that is justice.

Dave, I don't have a background in a lot of things (child birth, international affairs with Belarus, NASA space missions, to name just a few), but expect to have a voice in those things when I have something to say and would be darn offended, and very confrontational, if someone told me to go away simply because I don't have the proper background. I suspect you would react the same way if you thought what you had to say was relevant.

And, even if it is true that Len "has no background in amateur radio from which to make an informed decision regarding amateur radio testing," he has nonetheless successfully managed in spite of that to make a decision about code testing which is consistent with the decisions of many within the Amateur Radio Service (people who do have the background you seek).

> He wants morse testing ended. Based
> on what special knowledge and
> background? (snip)

I didn't know a "special" knowledge or background was required. It doesn't take great knowledge, or an indepth background, to see that Morse code is a declining skill throughout the radio world. Or to read what the FCC and others have said about Morse code. Or to think through the issue. Or to form an opinion based on any or all of that. Or voice that opinion.

> (snip) I'm certainly not forced to agree with

> from sarcasm with regard to his views. (snip)

Of course. Just as Len is not forced to leave the discussion just because you think he should.

> (snip) Len has participated and participated
> and participated. (snip)

More power to him. He has just as much of a right to do so as anyone else.

> (snip) He wants to participate and to prevent
> others from laughing at him or his ideas. (snip)

Really? I missed that. How has he tried to prevent others from doing anything?

> (snip) Others are free to participate and may

Lets be honest here, Dave. I seriously doubt his lack of a license, or comments (condescending, outragious, or otherwise), would really bother you that much if those comments agreed more with your own views. In the end, the only reason you point to his lack of a license, or try to ridicule his ideas, is that you don't agree with what he has to say. There's nothing wrong with that, but I doubt you are going to sway that many to your side of the argument with such transparent tactics (few are that stupid).

When I decided to become a Life Member of the ARRL the price was going to go
up soon. I believe it was going up to 8 bucks a year and going up a buck.

So I sent in my 180.00 (one hundred eighty dollars), I think that was
about 1974 or so.

Yeah it sure was a bad investment.

What an ass you are Harry. You need to have that horse kick looked at.

Not only that, at a recent meeting, the ITU-T (Telecommunications
Group, which defines coding) put forth a definition for a _new_
character in International Morse - the "at" sign (@). It's
.__._. (_AC_).

So much for "Morse is dead".

Harry is whats knows as a 'spoiler'. Sort of like a field mouse coming into your house, crapping all over it, chewing up what he can, and then running away to hide.

Don't worry about it. There are so many of them on usenet you need a score card to keep up.

> Put another way, you paid your ARRL life membership,

Nope.

I'm not a life member. I renew every couple of years, depending on
where the multi-year price break is and whether I still think it's
worth the money.

For the past 36 years (I joined in February of 1968) it's been worth
the money.

> you now
> know that was a very poor decision,

I know now that being a member has (so far) been a very GOOD decision
for me. YMMV.

> so you are now desperately
> trying to rationalize your poor decision to yourself & us.

Not at all. I'm simply stating a point of view.

If we consider just the magazine, $39/year works out to $3.25 an issue
for a pretty good general-interest ham radio mag. How much is a year
of "Worldradio" or "CQ"?

"73" is now gone, and "ham radio" has been defunct for well over a
decade.

None of the alternatives are as good as QST. And none of the others
were more than a magazine.

73 de Jim, N2EY

And I'll ask again:

what other organization or individual would do anything like the 121
page commentary on BPL?

I'm sorry, I can't agree with your new age "everyone's opinion has
value" when the topic is something in which someone has no background.
I take it that you believe that your opinions on child birth would be
meaningful or relevant to a woman who has had several children and that
your views on space flights would be found useful to NASA engineers. I
don't happen to think they would be. If you find that you have an
interest in a topic, I'd expect that you'd want to study it, learn a
great deal about it, participate to some degree--in other words, to gain
experience in the field under discussion. I'd expect, for example, that
someone who wants to participate to any meaningful degree in regulating
mining be schooled in mining and that someone who is to particpate in
the regulation of amateur radio be more than casually familiar with
amateur radio. If an individual has no background in a field and
attempted to preach to those actively engaged in that field, I'd not be
at all upset if that individual became "darned offended" or
confrontational. In fact, I'd find it fairly easy to go on with my
life.

> And, even if it is true that Len "has no background in amateur radio from

Well, he'd have to land somewhere on the issue, wouldn't he? He has
also arrived at a conclusion about code testing and about a minimum age

for radio amateurs which is at odds with the decisions reached by many
within the Amateur Radio Service (other people who have a background in
the subject).

> > He wants morse testing ended. Based

Not in amateur radio, it isn't. Now you see that you and Len share a
common mistaken view. Each of you might have a desire to see it as a
truth but reality doesn't seem to bear it out.

> Or to read what the FCC and
> others have said about Morse code. Or to think through the issue. Or to form
> an opinion based on any or all of that. Or voice that opinion.

Which brings us back to an earlier point made by you: that Len's opinion
should carry the same weight as the opinions of radio amateurs. The FCC
has said, on a number of occasions, that they'd wait for a concensus
among radio amateurs. They did not see fit to include SWL's or those
who worked at a military radio station in Japan fifty years ago. That
aside, Len has formed an opinion and has, on countless occasions, voiced
his opinion.

> > (snip) I'm certainly not forced to agree with
> > his views, to respect his views or to refrain

Really? Have you noticed a single occasion where I've supported the
posts of Bruce?

> In the end, the
> only reason you point to his lack of a license, or try to ridicule his
> ideas, is that you don't agree with what he has to say. There's nothing
> wrong with that,

You still don't completely understand so again, I urge that Google
search. Len isn't just wrong, he's rude and abrasive. Len claims to
just want civil debate on the issue of code testing. His posts do not
bear that out.

> but I doubt you are going to sway that many to your side of
> the argument with such transparent tactics (few are that stupid).

The stupid are those who'd take their ideas about amateur radio or
amateur radio licensing from one who is not involved in any way with
amateur radio.

Never underestimate the stupid. They are legion.

To which I'll add my own reasons:

1) The League presents a unified voice to the FCC and to congress.

2) The DXCC program.

3) Contests (especially FD, the DX 'tests, VHF/UHF events, 160m Contest)

4) Field Organization (to include the SM, net managers, Emergency
Coordinators, OO's)

5) League bulletins, whether via W1AW, local nets or the internet

6) The web page.

7) W1AW (I've also operated from the station).

One of the biggest reasons that a flat tax will *never* happen is that it will provice an easily quantifiable dollar figure as to what is collected. And that dog won't hunt for any number of reasons.

There are certain ummmm..., advantages of the murky system we have now.

Yes you are. Your beligerance keeps on.

>Len has had his say on
>countless occasions. He isn't involved with amateur radio though he
>knows some hams.

Yup, beligerance with flags and banners waving... :-)

>He has no background in amateur radio from which to
>make an informed decision regarding amateur radio testing.

Klunk, you are indeed weird as well as beligerant to
say that amateur radio is somehow so "unique" that it
is totally different from all other radio!

The physics of amateur radio is the SAME as the physics
of all other radio.

The jargon, patois, colloquialisms of amateur radio
communicating MIGHT be considered "different" than all
other radio services, but that is as easily picked up by
anyone going from one lodge hall to another. 10-4? :-)

>He wants morse testing ended.

Yes.

>Based on what special knowledge and background?

Based on 50 1/2 years of radio communications without
ever needing it or having to know it to "work HF."

Based on four decades of direct design engineering for
communications which considers ALL available modes.

Based on knowing the literature and history of ALL
radio communications, not the limited spoon-feeding
of knowledge from amateur fraternal organizations.
["Shannon's Law" was based on teleprinter signals,
not morse code and that Law became public in 1948
and accepted by the entire world of radio]

Based on the same bullshit heard for six decades
from elitist morsemen who still think that standards
and practices are the "same" as in the 1930s.

Based on what the FCC said publicly in 1990 and
again in 1999 that a morse code test is not necessary
for them to grant any amateur radio license.

>He wants a minimum age for amateur radio licensing.

Yes, but I don't make near the BIG THING you try
to make of it in here, Klunk. I said that on the public
record on NPRM 98-143 in January 1999 and
haven't pursued it since.

>Based on what special knowledge and background?

Show us your certificates and pretty paper saying you
are the EXPERT in everything you pontificate on.

>His right to direct his opinion to his government is intact.

Damn right it is, Herr Robust.

>Government is not forced to agree with his
>assessment of how amateur radio should be changed.

Who, besides your gloriousness and nobility, said
it should?

[let us know the date of your coronation so that we
may genuflect and worship your presence...]

>I'm certainly not
>forced to agree with his views, to respect his views or to refrain from
>sarcasm with regard to his views.

You are beligerant and pissed off that anyone DARES
challenge your arrogance about What Should Be!

In most anything...

>Wanting to be involved does not make
>Len other than a bystander in the world of amateur radio.

Herr Robust forgets that amateur radio licensing is NOT
dictated by a members-only club. Not in the USA...

>He is not a
>part of amateur radio simply because he comments to government or
>because he posts here.

Neither is this newsgroup some kind of "ARRL South."

>> Likewise, I
>> saw nothing in rules of this newsgroup which would restrict the
>> participation of non-Amateurs.
>
>Len has participated and participated and participated.

Herr Robust has arrogantly proclaimed and issued orders
and done the whole nine yards of the KH2D bit...on and
on and on and on and on...

>He wants to
>participate and to prevent others from laughing at him or his ideas.

Poor baby, reflections of your own golden eye scowling at
remarks you receive?

Herr Robust, I was on Usenet before the Internet went
public and am very, very familiar with what goes on,
and the inhabitants' attitudes in the cyberspace of
computer-modem communications...for more than
two decades.

The arrogant - such as yourself - HATE the comebacks
you get poking holes in your mighty balloons. Ergo,
you try the "reversal" bit and say that the hole-poker is
"afraid of being laughed at." Tsk, tsk, tsk.

EVERYONE takes a chance on posting something in
public. EVERYONE has to "take" what comes back
to them...or leave. That includes arrogant Waffle-SS
colonels.

>Others are free to participate and may form their own opinions of LHA's
>ideas. They are free to laugh at his ideas, to poke fun of his ideas
>and to counter his ideas.

AND AGREE WITH LHA's postings.

Now doesn't that just completely fry your psyche? :-)

However, your ego needs to have you completely in
control so you've gone into a fantasyland where you
are Supreme Commander who Knows Truth! :-)

>> You may not like what Len has to say, but the
>> lack of a Ham license alone should not diminish it or dismiss it.
>
>There's no "may" involved. I don't like what Len has to say and don't
>care for his windy, pontificating and condescending posts.

All the readers have "noticed" your opinion...:-)

>If you've
>read Len's stuff, you'll have no difficulty in understanding that his
>lack of an amateur license is not the only reason for making light of
>his opinions regarding amateur radio licensing.

The Supreme Commander has spoken!

There is NO First Amendment in regards to ham radio
regulations!

All amateur licensing regulations are handled STRICTLY
by the existing amateur licensees!

Supreme Commanders don't give a damn about
anyone who doesn't agree with his arrogant
pontificating orders of the day!

Sick transit, gloria mundi...

>since then?

As I see it the schism is from the general attitude of long-timers
evolving into two main groupings: Those that mightily resist change
and those who can accept change.

The first group wants a relatively inflexible hobby activity, generally
frozen at the standards and practices of the time when they first
became acquainted with amateur radio (usually their first license).
They want the hobby to remain relatively stable, something they
can identify with, something familiar and comforting. They want to
be first among their equals ("primus inter pares"). Such feel secure
only with the old familiar things. They take the fraternal order view
of amateur radio and thus build up a mystique amongst themselves
far greater than reality. Those favor morse code because the

fraternal order elders favored morse code when they were first into amateur radio.

The second group is accepting of change and they are not afraid of it (although the constant advancement of all electronics does cause some irritation). They are more interested in communicating and the communication arts, are willing to try out new things. They have a more realistic view of amateur radio as an avocational activity and don't have it become their lifestyle. They don't mind the "fraternal order" aspect (some enjoy that) but, at the same time, they are into trying out new things of many kinds. Their emphasis is on communicating, not the mode of communication.

The first group appears to have been in control of the League since the beginnings of that fraternal order as a local club. Such is a positive-feedback condition which supports the generally conservative-traditionalist fraternal brotherhood that is heavy into mystique. They cannot abide the second group because they are resistant to change. The end result is the schism kept wide by the first group.

The first group is secure and comfortable in familiar surroundings (and familiar mystique). If something was good for their Daddy and Grand-Daddy, then by damn it is good for them. Change is anathema because that is not familiar and makes them insecure. A side effect of that behavior is the pretense they are still as young as when they were first licensed long ago...or that they want to be that young again.

The upper echelons of the League have, by public statements and Board meetings, indicated that they have a majority of the first group. Hence the League remained adamant in supporting the morse code test requirement of S25.5 long after the IARU came out for revision. The upper echelons did the appeasement bit about a year prior to WRC-03 by taking the Neutral stand on the code test.

A neutral stand is a nice, easy cop-out in public. It takes no sides and thus doesn't cause as much controversy as taking one side or the other. Such is "comfortable." It also creates more mystique by the pretense that the upper echelons are "considering more important matters (than the code test)." Since most of the League membership has already passed a morse code test, it seems (to the upper ranks) that the code test is "unimportant."

All of the above is understandable...except that change WILL happen to the upper ranks whether or not they like it. League membership hasn't been above the one-quarter mark for a long time and the League NEEDS more members to survive whether the U.S. amateur radio license totals increase or decrease. League leadership needs to adapt to new times...denial of reality might be okay for a few more years but such stalling tactics will only foment a much larger event in the future.

>Now you've got hams kicking around the idea of a two license structure
>w/o Morse Code for HF access.

Unthinkable! :-)

"Morse code has always been in ham radio and it always will be!"

"The code test as always been in ham radio licensing and that's
how it must remain!"

"Nobody should be on HF unless they are licensed with a morse
code test!"

Brian, those aren't verbatim quotes but the gist of what they are
have been written by many of the beligerant "first-group" hams.

It should be clear that there will never be any "consensus" on
code testing as long as such beligerance remains rooted among
the self-styled elite morsemen of U.S. amateur radio.

Of COURSE you do, anonymous one.

How could anyone possibly doubt such a thing?

>> Why is it imperative to have a license, especially an AMATEUR
>> license?
>
>If one wishes to operate on the amateur bands one needs an amateur

>license - DUH!

Is "DUH" your real name's initials?

You had best check on which amateur bands are EXCLUSIVELY
allocated only to amateur radio.

Any other radio service allocated as primary or co-resident on ham
bands doesn't need any amateur license to operate there.

Worse yet, the government (including military) can and sometimes
does operate on bands which many amateurs think are exclusively
"theirs." No amateur license required by government/military operators
to operate there.

>> I took my FCC office test way back in March, 1956. I'd

>radio.

You can have your "say" DIRECTLY to the FCC. Of course, on the 14 petitions the official comment period is over but you are still allowed to late-file.

The only problem with comments to the FCC is that they expect all commenters to give their real name, address, etc., in order to be on the public record.

That makes everyone commenting vulnerable, doesn't it? By using ARRL as a middleman, you can keep your anonymity and arrogance and alleged superiority, spouting off from time to time. No problem.

If that is the sort of attitude of modern U.S. amateur radio, then it is no wonder that folks aren't rushing in to get acquainted with it or don't admire all the "expertise" of such amateur radio gurus.

I'll add:

1. They haven't revised the Amateur's Code to be Politically Correct.

2. A wealth of history is available through the QST View series.

3. ARES

4. QST holds a higher standard for products advertised to hams than any
other publication.

5. Doesn't send several fund-raising letters per week although this year
was busy for ARRL, I received two such mailings in 2003.

6. A field organization that will help anyone with an issue related to ham
radio, whether licensed or not, or an ARRL member or not.

7. Repeater Directory

8. The Handbook

9. The Antenna Book

10. ARRL Web site

I need to leave a few more for others to list!

Right Mike ....I seem to remember reading a few years ago that our tax laws at the Federal level when upright is a stack about 6 feet high. Wanna know what comprises this volume .... specific and I do mean specific tax breaks to individuals or businesses. The reason the flat tax will never be seen is that the gravy thats puts these "laws" into the books will be cut off from our duly elected reps. Also a fellow in here mentioned that the tax rate isn't really that 50% plus level doesn't count for the fact that not only are our payrolls taxed but also the good and services we all purchase. The big lie is found herein.

My Buddy phoned me with glee when Bill Clinton got into office. He is really going to put it to those rich bastards with a tax hike ...I was told. I said who is rich ...a 100K salary? My buddy said yes sir 100 K is a lot of money. I then told him that the fellow down the street who has a dry cleaning business probably takes that home after paying his staff, taxes and other expenses. and guess what ...your pants will probably cost 25 cents more for a clean when your buddy Bill's signature hits the paper.

And there are simply a lot of people who are not joiners. What percent of the seniors belong to AARP? What percent of gun owners belong to the NRA. With 1/4 or so of the licensed amateurs belonging to ARRL, it would not be surprising to if the ARRL were to rank quite high on the list of target group people actually belonging to the organization.

Not at all. The elderly benefited in their youth from public schools and in their productive years from schools for their children. Do you honestly think that in that limited time span that the percentage of the tax that went to the schools was enough to cover their own education and that of their children? My total annual property taxes are less than it would take to send one child to private school for one year. The public schools make it up by spreading it over a taxpayer's lifetime. Or are you saying that during their working years, a person's property taxes ought to be increased?

Keep in mind that even if a person never has children, they still benefit from the public education of the community as a whole. If they did not pay school taxes, they would end up paying increased taxes to support an increased number of people on welfare. It's far cheaper to pay school taxes so people can be productive than to support them on welfare.

Which is fine. But if you want something better than what the least awful candidate will provide, what do you do? If the majority of your party disagrees with you on some points, what do you do? Do you expect them to change just because you want them to or because you have been a member for nearly 20 years? It isn't going to happen. If you want change, then you roll up your sleeves and go to work on it; not sit and complain, not "take your marbles and go home." The latter two approaches never work.

Philosophically you are right Dwight. However, Len has a long history of diatribes and disjointed rambles that do not hang together. He is simply trying to agitate. I've kill filed his various aliases because of it. In contrast, the other denizens of this newsgroup, whether or not I agree with them, at least can put together a coherent statement of their point of view and the logic that they used to arrive at it. Naturally we all pick apart each other's logic when we don't agree or consider the logic faulty but the discussions make sense.

So how do you propose that change occur? What is your plan? Show me
changes that are needed and an effective plan to get there. So far all you
have done is bash the ARRL without presenting any alternative.

Dee D. Flint, N8UZE

Not necessarily. You merely need to convince the majority that your view is
correct so that people who have the same agenda as you will be elected.

> I wonder what elected office she holds in an effort to stem the tide of
change?

I choose to vote for officials who have the goals that I believe in. While
I disagree with the probable changes that are coming, they are not so
heinous that I see a need to rearrange my priorities to personally fight
them. They are changes I can live with should they come to pass.

Same here. I've been quite pleased with what I get from the League. The only times that I have not belonged after becoming a ham was when I was in exceedingly difficult financial straights where even that little bit of money could not be sparred. Thank goodness that didn't happen too often.

First of all, why in the world did you reply to my newsgroup posting
and crosspoast in 3 other groups? what a flippin' Moron!

Next of all, The info is accurate. when the FCC releases it's next
enforcement log to the ARRL, it will be released. unless Ol' Chicken
head told Riley not to tell nobody. so, we might not see a offical
notice, but if one wants confirmation contact W8NS, he's the dude the
dropped the dime. Trust me, Chicken Head got what he deserved. and
seeing the crap he pulled with yours truly, I'll MORE THAN happily
testify in court, on W8NS's part, if need be. So, Don, If you're
reading this, Come see your ol' buddy south of Detroit, if you need
some back up in court. I was personally a witness to that drunk's
antics on 3.865, night after night. and how he broke rules and acted
like an Idiot for like 3 years. (I got my general in 2000)

> your marbles and go home." The latter two approaches never work.

I vote! That's really about all I can do. And when enough people
believe what I do, then things may change.

Lets say I think that the deficit is too high. Who do I vote for? Who
speaks for me? Right now, I don't think anyone does, but I'll vote for
anyone who will.

But you seem to be saying that in order to have an opinion and express
it, I have to run for office. I wonder what office is high enough to
have an opinion? local tax collector or commisioner? Maybe they would be
allowed to have an opinion and express it on local issues. In order to
have an opinion and express it, I would have to be a Senator or a member

of the House. I suppose that the State versions of thes would have their opinions dissappear when an issue goes to the Federal level.

Seriously your approach sounds like: "Don't you worry your little head about anything, we have everything taken care of thankyouverymuch. And when we want your opinion, we'll tell you what it is.

Good heavens. I appreciate that you believe that people should work for what they believe in. But I can paraphrase what you are saying is that if a person isn't willing to get heavily involved, then they are welcome to shut up.

That isn't democracy, representative or otherwise, it's a virtual dictatorship.

In my club, I listen to everyone. You would just listen to the other board members.

I can imagine the response when someone wants to know where the money is gone, and has some ideas on how it should be spent. I guess you would tell them it isn't any of their business since they don't care to be a member of the board?

No that's not what I'm saying. I'm saying change doesn't happen without work. Since Brian chooses only to complain and not dig in and do the work, then he can't expect change. Brian's approach of changing because Brian wants the change is the dictatorial approach.

>
> In my club, I listen to everyone. You would just listen to the other
> board members.
>

No, any dues paying member has a right to be heard. They just can't expect change unless they do more. At the very least they need to convince other club members and then bring it to a vote of the general membership. But again this requires WORK.

> I can imagine the response when someone wants to know where the money is
> gone, and has some ideas on how it should be spent. I guess you would

All who pay dues have a right to examine the books. All who do not agree with where the money is going have a right to bring it up in a general club meeting and ask for a vote. But guess what. The latter two activities once again require WORK.

> >>I wonder what elected office she holds in an effort to stem the tide of

No Brian is welcome to his opinion. But if he isn't willing to do the work to effect a change then he is being unrealistic in expecting that change to come to pass. That is all. He wants things to change just by saying he wants them to change. I am challenging that self-centered, simplistic, and unrealistic expectation.

>
> That's YOUR claim.

That isn't correct, Leonard. You made quite a lengthy plea to the FCC
for the elimination of morse testing and for institution of a minimum
age requirement for amateur licensing. Are you now telling us that you
didn't mean those things? If not, it looks as if you, a
non-participant, knows far more about what is good for amateur radio
than any active, licensed ham.

> "What is best" is what YOU like. Everyone understands that.

No, that's what you're comments to the FCC and your comments here
indicate that you believe: that what is best for amateur radio should be
decided by someone who isn't remotely involved.

> >> That's why the staunch Believers insist on morsemanship as the

> Poor baby, you still don't understand the relationship?

Yes, I do understand the relationship between morse testing and morse use. Further, I understood that your most recent comments addressed used, not testing.

> PCTAs have constantly whined and bitched about "removing the
> morse test will end the use of morse!"
>

I'll take that bet. I happen to agree 100% with LHA that Morse testing is
no longer necessary in the amateur radio service. Even so, I still think he
is an over-pompous posturing twit who could benefit from wider bonding
straps attached to several additional grounding rods.

With all kind wishes for a joyous holiday season,

Look, Foggy--Any change in amateur regulations or in the licensing of radio amateurs effects me directly because I am a user of those segments of the radio spectrum designated for use by radio amateurs. Those changes would have no impact on someone who is not a licensed amateur--someone like you.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of December 15, 2003:

Novice - 32,792 (decrease of 16,537)
Technician - 259,563 (increase of 54,169)
Technician Plus - 63,689 (decrease of 65,396)
General - 141,431 (increase of 28,754)
Advanced - 82,092 (decrease of 17,690)
Extra - 104,798 (increase of 26,048)
Total - 684,140 (increase of 9,348)

Really? So, if you have no background in senior levels of government or no background in the issues at hand, you don't offer opinions when the government decides to makes policy decisions (taxes, immigration, welfare, social security, foreign affairs, and so on)? I find that highly unlikely, Dave. Code testing is a government decision/policy. And the right of the people to have a say in government decisions and policies is not "new age" thing.

> I take it that you believe that your opinions
> on child birth would be meaningful or
> relevant to a woman who has had several
> children and that your views on space flights
> would be found useful to NASA engineers.

Nice dodge, Dave. But we're not talking about a woman with several children or NASA engineers - this is a discussion about government policy. And, when it come to that (even abortion and NASA financing), I do expect my views to matter. After all, my tax dollars are paying for it. Code testing is also a government policy and the radio frequencies involved belong to all Americans.

> > I didn't know a "special" knowledge or

> Each of you might have a desire to see it as a
> truth but reality doesn't seem to bear it out.

What mistaken view - that the rest of the radio world must be considered when discussing code testing? If so, you're the one mistaken here. The FCC itself has even taken that view in the Report & Order following the last round of restructuring when they said;

"We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise."

The FCC went on to later say;

"We also note that most amateur radio operators who choose to provide emergency communication do so, according to the amateur radio press, using voice or digital modes of communication, in part, because information can be exchanged much faster using these other modes of communication. Further, we note that in traditional emergency services, such as police, fire, and rescue, there is no requirement that emergency service personnel hold amateur radio licenses or any other license that requires telegraphy proficiency. We conclude, therefore, that telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications."

Note the references throughout to other radio services and to other,
non-Amateur, radio technologies. If we're going to remain a valuable radio
service, worthy of the massive frequencies we hold and unlike personal radio
services (CB), then our ability to fit with and contribute to those outside
Amateur Radio must be a factor in this discussion.

I can think of several others here who could easily fit into that description, Dee. Len is indeed confrontational, but I've noticed the biggest complainers seem to be those who disagree more with his opinions then his demeaner - these same people seem to object far less when someone with a similar demeanor posts opinions similar to their own.

Welp, whatever it takes, I suppose...I'm just not a supporter of as much
taxation as there is. And, I think Sr. Ctitizens shouldn't have to pay
taxes and that if that needs to be accommodated, then the school taxes
should be increased during the years of some hereto-undertemined-age-limit
based timeframe. YMMV

Hmmm, hadn't thought about the people not having kids. If they aren't going
to add to the burden of society (terrible way to put that...but) by having

kids, then they get the break, too. After all...it'd probably come up a wash anyway; a trade for the tax-break they'd get on their annual income for not having to pay school tax if they don't have kids.

I like the idea of giving people who choose *NOT* to have kids breaks (on local school taxes), as well as those who choose to have kids (on federal income tax deductions).

More than 99% are not NCI members, either.

>It would be interesting to compare the ARRL membership percentage to groups
>like AARP and NRA

Good point!

I would add this, though:

There are currently about 684,000 individuals with US amateur radio licenses. Of these, at least 328,000 hold General, Advanced or Extra class amateur licenses. (I mention this group because they have access to all amateur radio HF/MF bands and modes, at full power). Novices and "Techs with HF" make up at least another 100,000, but their privileges only cover two modes and small parts of four bands.

Not including the five 60 meter channels and the Alaska emergency frequency, the US amateur bands below 30 MHz amount to 3,750 kHz of spectrum.

So why aren't the bands filled to overflowing with amateur signals 24/7? If even 1% of those 328,000 are on the HF/MF bands at any given time, that's 3,280 - a litle more than a kHz per ham, from the bottom of 160 to the top of 10. And that's not counting DX or Novices and Tech-Pluses.

A similar situation exists on VHF/UHF.

The inescapable conclusion is that many of those listed in the database are either totally inactive or only slightly active.

Has anyone told Len to go away? Not that I can recall.

Len, on the other hand, has told people things like this (direct quote from a
post of his on Oct 28, 2003:)

"Shut the hell up, you little USMC feldwebel. Learn to READ English."

(direct quote from Len Anderson - is that the sort of thing that constitutes
civil debate? Should we look to Len Anderson as a role model?)

Pot...kettle...
>
>I'm sorry, I can't agree with your new age "everyone's opinion has
>value" when the topic is something in which someone has no background.

Everyone's opinion has value, Dave. But everyone's opinion does not have the
same value.

>I take it that you believe that your opinions on child birth would be
>meaningful or relevant to a woman who has had several children and that
>your views on space flights would be found useful to NASA engineers. I
>don't happen to think they would be. If you find that you have an
>interest in a topic, I'd expect that you'd want to study it, learn a

>
>> Or to read what the FCC and
>> others have said about Morse code.

Done that.

>> Or to think through the issue.

Done that too.

>> Or to form
>> an opinion based on any or all of that. Or voice that opinion.

Ditto.

And in my opinion, a Morse code test for an amateur radio license is a good idea.

For expressing that opinion, Len has unleashed more name calling, insults, slurs and other childish behavior on me than I can remember.
>
>Which brings us back to an earlier point made by you: that Len's opinion
>should carry the same weight as the opinions of radio amateurs. The FCC
>has said, on a number of occasions, that they'd wait for a concensus

>>
>> Of course. Just as Len is not forced to leave the discussion just because
>> you think he should.
>
>Please point to one occasion in which I've suggested, requested or
>demanded that the kindly old gent do so.

I cannot recall any, Dave, even after being told, by Len Anderson:

"Shut the hell up, you little USMC feldwebel. Learn to READ English."

Dave did not respond in kind to Len's remarks, btw.

>> > (snip) Len has participated and participated

>>

>> Really? I missed that. How has he tried to prevent others from doing
>> anything?
>
>Go to Google. Select this newsgroup. Enter "Len Anderson". Be prepared
>to devote one or more evenings.

Be sure to use the various screen names he's used here, ("nocwtest", "lenof21",
"averyfine", "averyfineman", "lenover21" (all AOL) because most of his posts
don't contain his name. And he doesn't have a callsign.

BTW, he denied the use of at least one screen name ("averyfine") here. Then he
was angry, insulting and abusive when his mistake was pointed out.

>bear that out.

What his posts prove is that what Len really wants is for amateur radio to
either go away or become a high power, multiband version of cb. Every post of
his bears that out.

His interest is not in becoming a radio amateur or helping ham radio. His
interest is just the opposite.

Just my opinion.

>You don't seem to recognize that the desire to modernize the ARS has a
>groundswell of support.

How do you know?

Have you made a scientific survey to determine this "groundswell"?

What constitutes "modernizing the ARS"? Shall we all go out and buy new radios?

>It doesn't need to be filtered through state
>and regional directors, brought up in a board meeting, with lots of
>hand-wringing that there is no clear mandate...

Then what needs to be done? What is the "mandate"?

Some folks make a big deal out of the fact that ARRL's membership is only about
25% of US hams. These same folks ignore the fact that No-Code International's
membership is less than 1% of US hams, despite the fact that such membership
has no dues and no expiration or renewal requirements.

That's right. It's an interpretation that has developed over the years.

>The closest thing to it is in the First
>Amendment, which starts with my favorite five words:
>
>"Congress shall make no law respecting an establishment of religion or >prohibiting the free exercise thereof ..."

Exactly!

"Respecting an establishment of religion" means that the state shall neither support nor hinder any particular religion above any other. The most logical way to do that is to separate them.

It must be remembered that in colonial times many of the colonies had "establishment of religion" meaning that tax dollars were spent on specific churches, (almost always the Anglican Church, whether you believed in it or not). There was also a *legal requirement* that an authorized clergyman of that *established church* preside at weddings, christenings, funerals and other religious functions. The Founders did not want that sort of thing in their new country.

>>
>
>Welp, whatever it takes, I suppose...I'm just not a supporter of as much
>taxation as there is.

Nobody is - that's the easy part.

What services are you willing to give up in order to have less taxation? Less road maintenance and construction? Less police and fire protection? How about cutting the military budget? Education? Social Security? Medicare/Medicaid?

Your post reminds me of the scene in "Simple Life" where Paris Hilton and Nicole Ritchie are at the checkout counter in the supermarket. The total is almost $65 and they only have $50. They bat their eyelashes and ask "Can't we just have it?" (I am not making this up).

>And, I think Sr. Ctitizens shouldn't have to pay
>taxes

Why not?

Many senior citizens have significant incomes, from both employment and investment. Why should they be exempt? They already get an extra persoanl exemption just for being over 65.

Tell ya what, Kim - find a senior citizen of "average income" in your area and pay his/her taxes out of your own pocket.

>and that if that needs to be accommodated, then the school taxes
>should be increased during the years of some hereto-undertemined-age-limit
>based timeframe. YMMV
>
So the people who are struggling to raise and educate their kids, pay for their mortgages and their careers need even more of a tax burden?

>> Keep in mind that even if a person never has children, they still benefit
>> from the public education of the community as a whole.

Unless they grew up outside the USA, they also benefited from the school system that was in existence when *they* were growing up. Even if they went to private school, a public school system existed for them.

>> If they did not
>> pay

>to add to the burden of society (terrible way to put that...but) by having
>kids, then they get the break, too.

If you think kids are a burden to society, why did you have so many?

And remember that educating children is an investment in their productive power in the future.

Senior citizens can be "a burden to society" (your term, not mine) in the form of Medicare, Social Security, etc. Yet you would give them tax breaks.

>After all...it'd probably come up a
>wash anyway; a trade for the tax-break they'd get on their annual income for
>not having to pay school tax if they don't have kids.

More like not having to pay back for what they got as kids.
>
>I like the idea of giving people who choose *NOT* to have kids breaks (on
>local school taxes), as well as those who choose to have kids (on federal
>income tax deductions).

You forget that the people who don't have kids had public education avaialble
to them when they were growing up.

Offering an opinion and offering a sound opinion based upon experience
can be two quite different things. An opinion offered by someone who
has little or no knowledge of that being discussed isn't likely to be
worth much.

> > I take it that you believe that your opinions

Thanks. How did you know that I drive a Dodge?

> But we're not talking about a woman with several
> children or NASA engineers - this is a discussion about government > policy.

Why, Dwight! It was you who brought up those very items. How can it be
a dodge when I respond to them? Let's now discuss them as government
policy. What value would your suggestions on child bearing policy or
NASA policy have to those making decisions?

> And, when it come to that (even abortion and NASA financing), I do > expect my views to matter.

We all have unfulfilled expectations.

> After all, my tax dollars are paying for it. Code testing
> is also a government policy and the radio frequencies involved belong to all
> Americans.

Your tax dollars couldn't provide fuel for a rocket engine test-firing.
Have your view. Speak your mind. Don't expect others to greet your
views with reverence if you have no background in the matter under
discussion.

The mistake is in the view that morse use is declining in amateur radio.
It matters not that the morse isn't used much by other radio services.

> The FCC
> itself has even taken that view in the Report & Order following the last

Morse testing is no longer emphasized as evidenced by the reduction in
speed to five wpm in testing for HF access. Now go out and prepare

yourself in areas where the U.S. needs technical expertise.

Nothing in a five word per minute morse test prevents you from
performing public service work to your heart's content via digital or
voice modes. This public service work, according to FCC, is something
you may or may not choose to do. It is not mandatory.

To be very honest, Dwight, Bruce is rather a dim bulb and I seldom read
his posts, much less respond to them. Is an ongoing effort necessary or
am I permitted to choose to which posts I'll respond?

Yep. You are NOT a licensed Radio Amateur. This is a fact.

> I've been IN RADIO longer than you have, done more in radio
> and electronics than you have. I'm a PROFESSIONAL.

No, you are not.

"Professionals" do not conduct themselves the way you do. You
are a documented pathological liar and antagonist. You are not a
trustworthy person.

> Now, did you have some comment on morse code test retention and
> "how that so terribly affects your ability to perform as an amateur?"

Do YOU have a comment on how Morse Code testing (or lack of)
affects YOUR ability to perform as an amateur, Lennie?

Ooops...forgot...You are not a licensed Amateur...Just a
bystander. A boistrous bystander at that.

> I'm sure that anyone daring to express the thought that the morse test
> should be eliminated gives you the terrible shivers as an amateur.
>
> We can't have Kolonel Klunk getting emotionally upset, can we?

More of your "I'm only here to civilly debate the Morse Code
test" technique, Lennie...?!?!

Or yet another example of what a lying sack of excrement you are?

(That was a rhetorical question, Lennie...Don't sweat coming up with an answer...You can't.)

The 'lucky ones' did it to their wives, or husbands. And if they got away
with that they spread it around their neighborhood. Until they ran into
'Bubba'. At which point it ALL stopped.

Now we have usenet. And they can't be found, well not quite so easily
anyway. So they feel safe.

Based on absolutely ZERO experience in Amateur Radio.

> Based on the same bullshit heard for six decades
> from elitist morsemen who still think that standards
> and practices are the "same" as in the 1930s.

So far, Leonard H. Anderson, a person not licensed in ANY radio
service, is the only person suggesting that we "think that standards
and practices are the "same" as the 1930's.

(And more profanity from the ALLEGED professional.)

This is because he's extremely ignorant of the facts and arrogant
IN his ignorance.

> Based on what the FCC said publicly in 1990 and
> again in 1999 that a morse code test is not necessary
> for them to grant any amateur radio license.

Based on absolutely ZERO experience in Amateur Radio.

Obviously yet another lie, or Sir Putzalot would not make so many
"mistakes", including "missent" e mails, misrepresentations of his
identity via multiple screen names, etc etc etc.

> The arrogant - such as yourself - HATE the comebacks
> you get poking holes in your mighty balloons. Ergo,
> you try the "reversal" bit and say that the hole-poker is
> "afraid of being laughed at." Tsk, tsk, tsk.

So far all you have done is call Dave Heil names, Lennie. You've
not "poked holes" in anything, least of all anything he's had to say.

On the otherhand YOU have been caught lying so many times that
you make Jon Lovitz's "SNL" character look like a paragon of
virtue...Morgan Fairchild included...

> EVERYONE takes a chance on posting something in
> public. EVERYONE has to "take" what comes back
> to them...or leave. That includes arrogant Waffle-SS
> colonels.

Including you...or should I say ESPEICALLY you, Lennie?

> >Others are free to participate and may form their own opinions of LHA's
> >ideas. They are free to laugh at his ideas, to poke fun of his ideas
> >and to counter his ideas.
>
> AND AGREE WITH LHA's postings.

Like Brian Burke, the guy who can't provide us with the identity
of a single QSO allegedly made from Somalia...?!?!

Or Vipul Shah...The guy who (like Lennie) CLAIMS to be an
electrical engineer, then changes jobs because his family disaproves
of his job...Yeah...I can see how being a "professional" in an

honorable profession could be a black mark on the old family tree...

And of course we have "MegHz" and a litany of other "anonymous"
posters who leap to Lennie's defense, only to leap right back in to
obscurity.

> Now doesn't that just completely fry your psyche?

If it were true, it might. But even the folks who express the
same sentiments as you (save for the above mentioned fools) don't want
to be even remotely associated with you.

Do you know why?

> However, your ego needs to have you completely in
> control so you've gone into a fantasyland where you
> are Supreme Commander who Knows Truth!

Dig into Mama Lennie's correspondence books, Lennie...Look up
"paranoia" and what symptoms and behaviour manifest with it...

> >> You may not like what Len has to say, but the
> >> lack of a Ham license alone should not diminish it or dismiss it.
> >
> >There's no "may" involved. I don't like what Len has to say and don't
> >care for his windy, pontificating and condescending posts.
>
> All the readers have "noticed" your opinion...

As we have yours...along with your LACK of practical experience
in the Amateur Radio Service to back it up.

> >If you've
> >read Len's stuff, you'll have no difficulty in understanding that his

> when I respond to them? (snip)

As you know, they (child birth and NASA) were brought up in a discussion about government policy. Your reply was a dodge because you tried to apply those comments to something other than government policy rather than addressing them in the context they were made.

> (snip) What value would your suggestions on
> child bearing policy or NASA policy have to
> those making decisions? (snip)

We were talking about opinions, not suggestions. My opinions affect how I vote, which effects who is elected, which effects where tax dollars are spent, and so on. My opinions, voiced to others, may affect their opinions, which effects who is elected, and so on. Is this process all that unfamiliar to you?

> (snip) Don't expect others to greet your views
> with reverence if you have no background in the
> matter under discussion. (snip)

Don't be so vain, Dave. You don't speak for "others" and I don't expect anything from you.

> (snip) The mistake is in the view that morse use
> is declining in amateur radio. (snip)

I haven't said Morse use is declining in Amateur Radio. My exact words were "...Morse code is a declining skill throughout the radio world." Considering far fewer people in radio today are using code compared to just few decades ago, that isn't exactly an astonishing revelation, is it?

> (snip) It matters not that the morse isn't used much
> by other radio services. (snip)

Oh, it most certainly does matter. As I've already stated, if we're going to remain a valuable radio service, worthy of the massive frequencies we hold and unlike personal radio services (CB), we must consider the needs of

the other radio services when discussing any licensing issue - including code testing.

The FCC did exactly that in the Report & Order following the last round of restructuring when they looked at personal communication services, satellite communications, fiber optic communications, high definition television systems, and police, fire, and rescue communications. In that Report & Order, the FCC stated that "...no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear" and that "...the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service." Finally, the FCC said, "...reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise." In my opinion, the exact same argument could be made for eliminating telegraphy proficiency as a licensing requirement.

I would suggest a wider audience (a reality TV show, for example), but perhaps it is better that all this stays here in the newsgroup though. I'm not exactly sure the world outside is ready for the sense of reality shown by some in this newsgroup. They may just decide to lock the whole darn bunch of us up in the loony house.

Nah. It's a more subtle form of propaganda...lying by omission.

Any organization that has a large media base can do that bit
by simply omitting content that is unfavorable to the media Hq.

They control the media content.

If the high wire-pullers at the League want to emphasize code by
deemphasizing all other modes, they have perfect control to do so.

No one else will be the wiser if all the news-events-doings comes
their way via League-controlled information. Everyone is captive
if they don't have other sources of information. Very subtle.

You haven't seen the worst of his diatribes. There is no one else in this news group that I have kill filed. For example, you and I do not agree on a number of issues but I would not consider putting you in the kill file. Your writings are well constructed and generally stick to the point of the particular discussion. Thus one can have a give and take discussion presenting opinions and data to back those opinions.

And let's keep in mind that NCI does have a structure with officers and a board. The detailed policies and procedures were developed by those officers and that board based on the organization's stated goal. Thus it was "filtered" through a limited group.

One thing that the NCI has quite convincingly demonstrated is that HARD WORK is what is required to achieve a goal. Although I don't agree with their goal, I must commend them for getting in there and doing the work required. They did not sit on their hands and whine. They organized on a world wide basis. They lobbied the various governing bodies around the world to support a change in the code requirement at the last ITU conference. It is all the more convincing when one considers the low percentage of hams belonging to NCI. It shows that the minority can prevail if they have the

commitment.

Personally I support code testing but NCI certainly did their homework to achieve their goal.

No that point is not lost on me. I'm well aware of it. Lots of people
support continued testing, which is a point that is completely lost on you.

Well freedom of speech, while allowing verbal abuse, does not make such
verbal abuse as LHA likes to heap on those in this newsgroup acceptable.
Just because one can do something doesn't mean that it is reasonable to do
it.

>
> The inescapable conclusion is that many of those listed in the database
are
> either totally inactive or only slightly active.
>

I don't think it's "inescapable" --- in fact, I think it's incredibly
far-fetched to expect that...

1) ...1% of all of us would be on the air transmitting at any given moment,
and....

2) ... even if we were, that more than a fraction of that 1% would be heard
at any given QTH, presuming they're somewhat evenly distributed across the
available 3,750 kHz of spectrum.

I consider myself a reasonably active licensee, perhaps more active than the
average. Other than contest weekends, my transmitter is actually ON THE AIR
transmitting a signal perhaps no more than 60 minutes a week. That's less
than 1% of the time that you could hear on the air, propagation permitting.
If everyone were as active as me, it would take 168 hams transmitting (and
presumably another 168 listening --- total of 336 hams) to keep a single
frequency occupied 24/7. Now if we suppose that on average, each ongoing
QSO occupies 1kHz of spectrum (phone takes up more, morse and data take up
less) we'd need 1,260,000 (336 x 3750) active hams to keep all frequencies
QRL 24/7. Of course this presumes that every QSO would be heard everywhere,
but thanks to the magic of RF propagation, we are able share most
frequencies geographically, and in fact more than two stations can
simultaneously use a single frequency.

So much for your 'inescapable' conclusion!!!

Don't flatter yourself, Brian. I've been discussing that notion since the mid 1960's when the FCC and ARRL were busy dreaming up their dis-incentive licensing fiasco.

Sunuvagun, isn't it a shame I've spoiled another of your organ-grinder dance tunes.

Less road maintenance and construction? For sure. I haven't driven anywhere in Texas since 1979 without some kind of road maintenance or construction going on, literally. Don't need it. It's still going to be congested, there's still going to be accidents, etc. The *only* thing I'd like to see on the roads here is higher stripes or city titties (as they're called). When it rains here, can't see the lane markings.

I couldn't be objective with the police and fire protection. I don't live in an area where I either need a lot of that or see any benefit of it. BUT, I bet the fat could be trimmed from the departments of both entities and we could save some money.

Military budget. Again, how much fat and ridiculous spending is there? I suspect a lot.

Education. Well, let's see. Up north when my kids went to school in the public school system, I cannot remember ever having to buy their school supplies when they were in elementary school. Down here, I pay school taxes PLUS had to spend about $200.00 per kid each year of school up to about 7th grade, for their school supplies. Go figure. And, again, enough fat trimming and I bet the taxes wouldn't have had to be as high as they are.

Social Security, in my opinon, is a farce. Do away with it.

Medicare and Medicaid I am happy to provide for my elderly community. However, again fat trimming probably would save lots of money.

Don't know why my post reminds you of that. I'd more be saying, "why do we need the pretty building, the pretty concrete stars on all the bridge columns, the pretty landscaping along the new highway, the pretty building with all the way overboard amenities for the high-salaried and not-so-worth-their-salary mucky mucks in offices that are plush and grand, etc., blah, blah, blah.

Yep, "why do we need it?"

I think you're giving NCI way too much credit, Dee. Indeed, created in the late 90's, they came to the debate rather late and have done little beyond urging members to file comments on related issues before the FCC (no visible government lobbying and no significant world-wide organization - a few members in a few countries). If anything, NCI's most significant contribution, once they did arrive on the scene, has been to serve as a lightning rod for criticism from code supporters, leaving a vastly greater number of non-members relatively free to make the case against code testing wherever possible. Moreover, there would have been no gains at all if there had been no substance to the core arguments against code testing. Those arguments existed, and were being made, long before NCI joined the debate.

That's the really far-fetched part. Distribution won't ever be even or even nearly so, by frequency or time. At 2AM local during sunspot minimum, the 1700 kHz of 10 meters isn't lilkely to be full of signals.

>I consider myself a reasonably active licensee, perhaps more active than the

>transmitting a signal perhaps no more than 60 minutes a week. That's less
>than 1% of the time that you could hear on the air, propagation permitting.

Well, there you have it. Some would say an hour a week is reasonably active, others would say it's quite inactive, etc. YMMV

>If everyone were as active as me, it would take 168 hams transmitting (and
>presumably another 168 listening --- total of 336 hams) to keep a single
>frequency occupied 24/7.

And that's the point - everyone isn't even as active as you (on noncontest weekends)

>Now if we suppose that on average, each ongoing
>QSO occupies 1kHz of spectrum (phone takes up more, morse and data take up
>less) we'd need 1,260,000 (336 x 3750) active hams to keep all frequencies
>QRL 24/7.

Exactly! And the bands aren't anywhere near that busy - even on contest weekends.

> Of course this presumes that every QSO would be heard everywhere,
>but thanks to the magic of RF propagation, we are able share most

>frequencies geographically, and in fact more than two stations can
>simultaneously use a single frequency.

And then there's things like roundtables and nets.

>goal, I must commend them for getting in there and doing the work required.

>They did not sit on their hands and whine.

Very true - but how much "hard work" was really required?

- They set up a website and a board
- They made a proposal to FCC and two directors went to Washington (on their own nickel, BTW) for an ex parte (3 hour drive at most)

- They petitioned FCC after the treaty changed

>They organized on a world wide
>basis. They lobbied the various governing bodies around the world to
>support a change in the code requirement at the last ITU conference.

How much did that really take?

>It is
>all the more convincing when one considers the low percentage of hams

>commitment.

And if the governing bodies are already headed in that direction to begin with. We've had a nocodetest amateur license here in the USA since 1991 - that's more than 5 years before NCI was started.

>Personally I support code testing but NCI certainly did their homework to
>achieve their goal.

Agreed!

would
> do anyhting like the 121 page commentary on BPL?)

Representation of what the Board *perceives* to be the wishes of the
membership.
I don't believe that non-members get the same attention on issues as
members, but
that is reasonable, since member dues support the ARRL.

> 2) QST and other publications (only the RSGB Handbook is comparable)

QST has gotten better, with the dropping of a lot of the contest data and
more
focus on a range of articles from beginner to expert level. I'd like to see
more
technical focus on modern stuff and fewer articles on building regen
receivers
with tubes, though.

> 3) Contests and operating activities (particularly SS and FD)

I'm not a contester, but sponsoring such activities is fine (glad they're
not using valuable QST pages for data dumps of results, though ... the
website is a much better venue for that info).

> 4) Product reviews (much more in-depth than any other amateur publication)

The lab does a great job on product reviews.

> 5) Elected officials (they listen even if they don't agree)

YMMV, depending on what area you live in, whether your Director is
open-minded and progressive, etc.

> 6) W1AW (been there and operated the station, too)

I have mixed views on the value of W1AW ... a good museum to "the Old Man,"
but perhaps its services could be provided by alternative means at lower
operating
cost.

Having said all of that, I'll now surprise some of you who have accused me
of being

an "ARRL-hater" (not saying that Jim has made that accusation).

I recently paid the $975 fee and am now a Life Member of the ARRL.

While I've had, and may continue to have, disagreements on some aspects of policy with the ARRL Board, I recognize that the ARRL does do a LOT of good things for the ARS and, in addition to my previous contribution to the BPL
fund, I wanted to support the organization's good works (I can always continue
to fight with them on areas of disagreement :-)

Remember the "good ole days" of the 14.313/14.300 wars?
The amazing cavalcade of assorted nuts, goofballs, toilet tics
and freaks that would flock to this on a near-daily daytime
basis? Remember also all the legendary crazies and kooks
that populated 75 meters in the P.R.H. (Pre-Reilly H.) days?

Well....those days are gone forever, unless you have a tape
recording collection of the same. If you wish for those fun
days when 20 and 75 were a non-stop cavalcade of comedic
camaraderie of crapola again....just point your mouse to:

http://www.network54.com/Hide/Forum/243612 (....and click)

I am fairly certain that every kook and goofball that the FCC ran off
of 20 and 75 are now at this URL. See for yourself and decide.

A very amusing place, with funny pictures too!!

Bro. R.G.58AU Stairmaster
First Unification Church of the Divine Fart Whistle
Doha, Quatar
(a fully tax deductible ministry and subsidiary of Halliburton Corp)

RIYADH, Saudi Arabia
13 Dec 2003

Saudi Arabia has officially banned the importation of female blowup dolls
and stuffed
animals, giving merchants three months to dispose of such stock, a
state-owned ewspaper reported Wednesday.

Interior Minister Prince Nayef ordered the ban which was relayed
around the country by the national Chamber of Commerce and Industry,
Al-Riyadh said.

The daily gave no reason for the ban, which could not be confirmed
with government officials Wednesday. Strict interpretations of Islamic
law ban representations of living beings and any exposure of the
female figure.

The ban singled out stuffed-animal toys and female dolls. It did not
mention male dolls, and it was not clear if these were banned as well.
The order also ordered any mannequins for female clothes be "far from
any indecency"

The ban comes at a time when some in Saudi Arabia have questioned whether the country's strict Islamic law fuels Islamic militancy.

Yes, it's another flash presentation:

Depends on how you measure it. I know I made a trip
to the FCC with Carl to make a direct presentation on an
"exparte" basis. There was lots of other stuff done by
different folks (web site creation, process membership donations,
etc.)

> - They set up a website and a board
> - They made a proposal to FCC and two directors went to Washington (on
their
> own nickel, BTW) for an ex parte (3 hour drive at most)

3 hour drive...more like 4-5 hours one way.

> - They petitioned FCC after the treaty changed
>
> >They organized on a world wide

> We've had a nocodetest amateur license here in the USA since 1991 - that's
more
> than 5 years before NCI was started.

No argument there and we'll never know the weight of NCI's
role in the 98-143 decisions...but who cares anyway? NCI
did what we did to further the end result. If anyone knew the
result beforehand, let them speak now. failing that, NCI wasn't
about to trust to chance not doing what we did. If, in the end,
it really wasn't necessary, then we don't care. We did what we

believed was necessary to further our cause.

> >Personally I support code testing but NCI certainly did their homework to
> >achieve their goal.
>
> Agreed!

Thanks...and I do think a number of folks in this newsgroup
did not expect anything of significance to come from those of us
that formed NCI in the beginning. Those same people (IMHO)
thought NCI just was a group of people posting in this
newsgroup...they never expected the core of NCI had life
experience in FCC dealings, organization skills, web skills,
legal document writing, etc.

To NCI's credit, NCI commentary was quoted several times
in the FCC R&O on 98-143 to bolster FCC conclusions.
That's a significant accomplishment (IMHO).

Anyway, it has been a relatively good year...even of the FCC
is dragging their feet on droppng code in the USA :-) :-)

Cheers,
Bill K2UNK

>> would do anyhting like the 121 page commentary on BPL?)

It should be mentioned that Carl has done very significant work in fighting
BPL, both in the form of first-hand observations and measurement of the Emmaus
test site, and commentary to the FCC. But even he, an experienced professional
in the field, cannot equal the resources of an organization like ARRL. (And I
bet he'll agree with me on that.

I disagree. The mag is permanent, the website isn't. Part of being a journal is to document things for posterity.

I think the contest results, BoD minutes, and Section News belong in QST. As do technical articles.
>
>> 4) Product reviews (much more in-depth than any other amateur publication)
>
>The lab does a great job on product reviews.

And has been for more than 20 years now. If a Product Review saves a member from making just one expensive mistake, a lot of dues are paid for.

Remember the "Maxxcomm Matcher" (sp?).
>
>> 5) Elected officials (they listen even if they don't agree)

I agree with all of that except for one small point. The ARRL is not "them" - the ARRL is "us" (the members). We elect the policy-makers (Directors and Vice Directors) and the Section Managers (who don't make policy, but are the top field personnel in our sections).

73 de Jim, N2EY

"I'm the ARRL"

(and so is WK3C)

This member supports the ARRL. Also, this member did not receive a
questionare when the ARRL was conducting a poll of members and
non-members.

> > 2) QST and other publications (only the RSGB Handbook is comparable)

The CQWW magazine regularly presents information on the modernizing of
the ARS, and even has space to present contest information.

> > 4) Product reviews (much more in-depth than any other amateur publication)

I don't disagree that the ARRL is a valuable organization in the US,
and I will continue to support it. However, when it comes to the
future of the ARS, I'd rather stand before the FCC and handle my views
all by myself.

> 73,
> Carl - wk3c

Carl, you should see the NCI bashing being done by Dee and Jim on the
other ARRL thread.

Bush and the Republican party may need him. If
Bush starts to take a beating in the reelection
poles over his actions in Iraq he may well need to
have Saddam come out and admit he had WMD, and
where they are currently. Then Bush can sit back a
say "I told you so!". That's why I don't think
Saddam will get the death penalty and why he
didn't put up a fight. He figures he can cut a
deal with Bush to help his reelection while saving
his own skin in the process. All he has to do is
hold out long enough. It may suck, but hey, its
always been politics over justice in this country.

Yeah, Nuvistors are getting hard to get.

How about reprints of memorable articles from yesteryear? Two from
the 1950s which are still applicable today for every class of licensee
come to mind:

"Guys for Guys Who Have to Guy" (a basic paper on guyed towers)
"Over the Hills and Far Away" (ditto on tropo propagation)

How many of the "frequent poster" club here read them when they
first came out or even some time later?

Wait 'till your building catches on fire or you need paramedic
service after a fall. Been there, glad that it was available.
Since then I've been one of the biggest boosters for the local fire
department when budget time comes up.

>Education. Well, let's see. Up north when my kids went to school in the
>public school system, I cannot remember ever having to buy their school
>supplies when they were in elementary school.

One of the fun times as a kid was when Mom took us to the local
stationery store for our school supplies at the beginning of the
school year - pencils, crayons, a new ruler, notebooks and pads,
book covers, erasers, all sorts of stuff.

>Down here, I pay school taxes
>PLUS had to spend about $200.00 per kid each year of school up to about 7th
>grade, for their school supplies.

What do you have to buy for that price? If it includes books I can
agree. They should be supplied at no cost to the student..

>Social Security, in my opinon, is a farce. Do away with it.

I and a lot of others here and elsewhere receive SocSec retirement
benefits. Fix it, don't wreck it any further.
>
>Medicare and Medicaid I am happy to provide for my elderly community.
>However, again fat trimming probably would save lots of money.

The recent "improvement" in Medicare was a big step backwards. I
get Medicare as well as private health insurance benefits and I pay
handsomely for both. The only difference with Medicare included is
that I don't have to pay a co-pay for office visits and for that
privilege I pay a lot more in "Medicare monthly payments". Who
ever said that Medicare is free?

>Not only no, but hell no. I'd rather see people get pissed off enough at
>the ridiculous spending that goes on with our tax dollars. Trim all the
>ridiculous spending, and some of the cuts I am talking about would hardly be

Yeah, that's it. Don't pay a pension to those retired employees who
invested their after-tax income in government pension plans while
they worked their a**es off for diminished salaries because they
believed in using their skills for the benefit of the citizenry.
Especially my late father-in-law who was a civilian USAF engine
mechanic who got forgotten in an engine housing and spent almost 15
minutes baking in 110 degree heat in the desert...

Why am I wasting my time debating this ??

I agree, Dwight. What I find most distressing about NCI is that as a
late comer to the game, they were in a position to offer some leadership
in the "brave new world" post CW. While there is no question that Carl
supports retention of technical acumen in the service, some other
members do not. If I were in charge, I would have a plan all mapped out
to fill the coming vacuum. Of course its hard for me to say what that
plan would be, because I support continuned Morse code testing. 8^)

The "road maintenance and construction" I am speaking of is the constant
construction/reconstruction (to include redirecting even) of lanes on
highways. What you are speaking of *is* the kind of maintenance that is
needed; therefore *not* included in my "trimming the fat" concept of
reducing-costs-therefore-taxes.

Again, you're speaking of needed services. I am talking about trimming the
fat. For instance, why on God's green earth does it ever, ever take 4-5 cop
cars to handle a traffic call? Now, before the zealots go nuts--yes, I know
there are times when that call may become dangerous for an officer--so I can
see two cars, maybe, and not every time.

Thank goodness I don't pay it any more--but my kids' school supplies ended
up at just near $200.00 a kid by the time they got to around 4th grade.
Kleenex, glitter, scissors, glue, ruler, pencil box, colored map pencils,
pencils, construction paper, on and on and on. AND specific brands, even.

Uh huh. Well your resentment is forgetting that I, too, will *maybe* be a
benefactor of the system someday. But, again, a much better system could be
had and I think it would be better run by *us*, meaning either a system
wherein we determine our own investment, or it is "governed" but not held by
the government.

Pension? So, you consider SS as a pension--something, I might add, for which it was *never* intended? I said nothing about people retirements and pensions and don't be so willing to let your indignance misdirect what someone said. I *do* include companies trimming the superfluous crap from their budgets, to where maybe pensions and retirements would reflect *more* what you deserve and what your hard ass work was for. By the way, I do *not* work for the benefit of "the" citizenry...hardly. I work for *me* and *mine.* The benefit is that, through that, it works for the citizenry.

More importantly, why did you bring such an emotional topic up in a debate? To influence or shut down response? Sorry about your late father-in-law, but you could have left that to yourself and continued on with effective (well, at least as effective as it could get here) debate. But...were you blaming *me* for what happened? Because of how I believe? I mean, c'mon Phil, that came from nowhere.

Oh well...go ahead, attack now.

Agreed. By the time NCI joined the debate, the debate was pretty much resolved. So, instead of linking themselves to this one issue, they may have better served the Ham community by focusing more on what follows. But, I don't think there is any consensus on what might follow. Since most are satisfied with everything else, I suspect the code test debate may be the last big debate in the Ham community. Of course, they'll always be small debates, but not nearly as widespead or as all consuming as this one.

Exactly. I've driven through Texas recently (I-10 and I-20) and they do need road maintenance. On several sections of those highways, it may be smoother to just drive through the desert on the sand. The last time I drove through Northern California (several years ago), I-5 had similar problems. On some sections of I-5, I had to slow down to 35 mph to avoid being literally bounced around inside the vehicle. By comparison, Alabama recently repaved their major roads and was a pleasure to drive through.

> role of a little kid. Well, I'm not giving in to the bully.

After some thought, it occurred to me to restate your posstion in
slightly different terms. How about this:

People tend to do what works for them. If a certain behavior produces
a desired result, they will tend to repeat and expand that behavior if
they want the result another time. This is a basic concept in child
rearing - you reward the behaviors you want and do not reward the
behaviors you don't want. And "reward" can take many forms - arguing
with a child from 7:30 to 7:35 about the fact that their bedtime is
7:30 is "rewarding" the arguing behavior because it results in a 7:35
bedtime.

And the effects go beyond the people directly involved. If another
child sees that arguing with a parent "works", then they're much more
likely to try arguing or some variation of it somewhere down the line.
Maybe the argument won't be about bedtime but the same tactics will be
used.

This doesn't mean the child has consciously figured all that out and is working from a preconceived plan. It just means that the effects are the same, and a parent has to take a different approach that doesn't effectively reward the unwanted behavior. Good parents know all this - again, sometimes not consciously.

Another important concept is to be consistent. The child needs to learn not only that arguing over bedtime at bedtime doesn't work but that it *never* works.

So in the case of the driver who "behaves like an idiot", Kim is being very careful and consistent to *not* reward the "idiot" behavior by pulling over and letting the person go by. Because if such behavior works, we'll see more and more of it. Not just from the current batch of idiots but from presently non-idiot drivers who see that it works and try it themselves.

OTOH, if "behaving like an idiot" on the road is not rewarded, the driver may try something else (like courtesy, or getting on the road a few minutes earlier).

Does all this agree with your thinking, Kim?

Dave,

A bit of clarification.

Mr. Anderson has repeatedly expounded his views on a wide range of
topics both here and in voluminous, repetitive comments to the FCC.
But I don't recall him ever claiming that they were "what is best for
amateur radio" or that he even knows "what is best for amateur radio."

> You made quite a lengthy plea to the FCC
> for the elimination of morse testing and for institution of a minimum
> age requirement for amateur licensing.

That is correct.

> Are you now telling us that you
> didn't mean those things?

I'm pretty sure Mr. Anderson means them. But even if he doesn't, he
has not disavowed them to FCC or to us.

> If not, it looks as if you, a
> non-participant, knows far more about what is good for amateur radio
> than any active, licensed ham.

Ah, there's where your logic fails, Dave. You're working on a false
premise.

You're *assuming* that everyone who has an opinion on amateur radio
policy issues is interested in amateur radio having the best possible
future. And in most cases that's true - but not when Mr. Anderson is
involved. His behavior here, and his comments to FCC, indicate that
he's *not* interested in what's best for amateur radio. He's just
interested in stirring up division, discord and hostility between
amateurs, diverting them from other issues, and denying amateur
traditions and contributions to society and the radio art.

His hobby isn't radio. His hobby is wasting time. Your time.
>
> > "What is best" is what YOU like. Everyone understands that.
>
> No, that's what you're comments to the FCC and your comments here

> > >> KNOW what is best" therefore their way MUST triumph.
> > >
> > >You claim to know what is best for amateur radio.
> >
> > Nope.
>
> Your weak denial rings hollow.

Not at all. Mr. Anderson wants what he wants, not what is best for
amateur radio. See how logically consistent that is?

Suppose someone really hated amateur radio and wanted to damage it as
much as possible without being obvious about what they were doing.

Wouldn't one way to do that be to try to maximize internal bickering
and arguing among hams, thereby diverting them from useful discussion?

Wouldn't another way be to constantly bash and deny the
accomplishments, practices and traditions of amateurs and the national
organization for amateur radio?

Wouldn't yet another way be to spread false information and to push
for rules changes that have no purpose except to reduce the number of
newcomers (like age restrictions)?

Think about it, Dave. Remember the behavior profile. One of your
premises is faulty.

You WOULD see a "schism", Lennie, but then since you are NOT a
part of Amateur Radio and do NOT have any experience in matters
pertaining TO Amateur Radio, yours is an uninformed opinion.

> The first group wants a relatively inflexible hobby activity, generally
> frozen...(SNIPPED)

You have yet to have this incessantly repeated assertion
validated by any substantial evidence, except for your own mindless
rantings, Your Scumminess.

> The second group is accepting of change and they are not afraid of
> it (although the constant advancement of all electronics does cause
> some irritation). They are more interested in communicating and the

> communicating, not the mode of communication.

You really do hate the "lifestyle" thing, don't you, Lennie?

It just irks the be-jeebers out of you that people do for
free-and-fun that which you only saw as a pecuniary pursuit.

Sucks to be you, Putz.

> The first group...(SNIP)

"The first group" of "what", Lennie? From what poll or
demographics survey did you come up with ANY different "groups"...?!?!

A casual purusing of todays QST or CQ magazine compared with,
say, September 1955 will immediately shatter any more of your
assertions of "stuck" in past practices or technologies rants.

> It should be clear that there will never be any "consensus" on
> code testing as long as such beligerance remains rooted among
> the self-styled elite morsemen of U.S. amateur radio.

So what you're saying is that until everyone sees it YOUR way,
there'll be no concensus, huh???

Arrogant Putz.

Two questions...
1. What "other members" (I presume you mean Board Members), other
than W5YI, do NOT support retention of technical acumen?

2. What is "the coming vacuum"?

Cheers,
Bill K2UNK

issue"...LHA

Quit avoiding making direct answers to direct questions, Your
Scumminess.

> The League (of Notions) MAKES MONEY on the publication side
> of their conglomerate of control.

"Conglomerate of control"...?!?! The ARRL is the >>ONLY<<
Amateur Radio publisher out tehre, Lennie?

> Ads in QST pay for everything in the QST staff and the cost of job
> printing and fulfillment (publication talk for mailing/distributing).

Speaking of "fulfillment", I imagine that's what the ARRL staff,
(Ed hare, et al) have once every two weeks, Lennie.

Sure is nice that THIER magazine is still in business, isn't
it...?!?!

> The "non-profit" stuff and nonsense is for lowering their taxes.

It works. It could work for you too, if you cared to try.

> >I interviewed for a League position years back. The
> >salary offered wasn't enough to cover a move and life in the greater
> >Hartford area.
>
> Translation: You were rejected. (boo hoo for you)

Facts to the contrary exist. The League has solicited for other
positions int eh past, and Dave's assessment of the League's salary
offerings are on-the-mark.

That's on the web too, Lennie. (Facts suck when they screw up
your rants, huh, Lennie...?!?!)

> > While I'm sure that salaries are now better, I don't

"Non-profit" is more than a tax shelter.

The nature of the ARRL still supports and substantiates thier
non-profit status.

Sorry you don't care for it.

> If you are foolish enough to believe that W1AW's station, the
> "museum" and all the other paraphenalia came out of dues, you've
> got a database gap large enough to sail the USS Enterprise through.

And you have, of course, "facts" that delineate what dollars came
from which accounts to cover all these projects, Lennie?

> >With all the dissatisfaction you've expressed, why not start your own
> >organization for like-minded hams? I'm sure you'd amass a following in
> >no time.
>
> Three-fourths of all licensed U.S. radio amateurs are NOT members.

Eight tenths of all Americans are not card-carrying members of
the political parties they usually "support", either, but they do.

Your point?

> That should be evidenciary. To all but the minority who are members.

Again...so what?

> Members "KNOW what is good for all the others" and therefore they
> are the elite.

Obviously not enough of the "majority" feel compelled to
"overthrow" the ARRL over it's policies or practicies, Your
Scumminess.

Even more evident, then, is that the "minority" you refer to MUST
be fairly representing the "non-members" since there is no organized
alternative to the ARRL.

> The League (of Notions) still holds on vainly to the idea that morse
> code is still the ultimate of amateur skills...long after the rest of the
> radio world has given it up, discarded it for communications.

Why do you persist in publically misrepresenting the truth, Sir
Anderscum?

> Continue to be the acidic spam-bot for the League (of Notions), old
> Klunk. You have taken a Ba'ath...but are yet unclean.

"I am only here to civilly debate the Morse Code test
issue"...LHA

Obviously not.

However, your child analogy falls apart when you remember that you're talking about an adult - an adult that is going to get very angry at a person blocking the fast lane while he and others are trying to pass. Lets be realistic here. If Kim is intentionally blocking others on the roads, she doesn't deserve courtesy. Instead, she is more likely to be a victim of road rage (something else she doesn't deserve, but far more likely). If she manages to avoid that, and if one of those people she is blocking just happens to be a cop, she may instead eventually get a ticket for not driving on the right.

Coming from YOU, Lennie...?!?!

You can't tell the truth to save your life, as worthless as THAT is...

> I've never gone to Rohn for any towers are antennas. Three other
> commercial firms, Andrew being the oldest (and still solvent).

For what? Obviously NOT the "tower" at YOUR "QTH", Lennie.

> Why the sudden misdirection into FALSE CLAIMS about some
> company "waiting for my business?"

Why YOUR "misirection" away from the hundreds of direct questions put to you about your countless mistruths, assertions of action (where no action took place), misrepresentation of the character of your military service, etc etc etc...?!?!

> It would give you a baseline for MORE creative lying in here about
> "interviewing with the ARRL."

Speaking of "creative lying", let's review a few of yours:

Your assertion of "I am only here to civilly debate the Morse Code test issue".

Your assertion of dishonesty of the ARRL in general and the ARRL BoD in particilar.

Your assertion "I am going to get an Extra Lite out of the box"

Your attempt to associate your military service with that of Soldiers who were KIA in Korea, despite your having still been in school when it happened.

Your "record" of aeronautical experience.

Your numerous attempts to disguise your identity behind numerous screen names.

Shall we go on...?!?!

> >I've made no such statement. I know how a non-profit organization
> >operates. I know how the ARRL operates. Sadly, I know how you operate.
>
> I'm not a licensed MD.

Whew. That's a relief. Now it's just too bad Mrs Lennie isn't a proctologist...

> So, everyone is not allowed to comment on anything if they
> are not a "member?"

"Commenting" on League issues is a courtesy, not a right, Lennie.

> The League is a POLITICAL ENTITY. They lobby.
>
> The League is OPEN FOR COMMENTARY BY EVERYONE,
> senior.

It's "Senor" in your application, Lennie.

> The First Amendment of the United States Constitution allows
> EVERY CITIZEN to comment.

No, it does not.

The First Ammendment prohibits the GOVERNMENT from supressing
"free speech". Please refer to Junior High School Civics, Lennie...

> Except in your amateur universe...

And anywhere else that is not a Governmental entity, Lennie.

Please try to get it right. It's embarrassing to have my kids
read your asserions of college education only to not be able to
understand first year US Government.

> >> That should be evidenciary. To all but the minority who are members.

> TAKE THINGS IN CONTEXT.

Why? You don't.

> See a real MD...or psychiatric specialist.
>
> You need one.

Please dig out Mrs Lennie's correspondence books, Lennie, and
research the manifesting symptoms of paranoia. Especially note the
parts where folks with that particular malady usually suggest everyone
EXCEPT themselves has some problem requiring "professional attention".

> >Sounds like the bilious rantings of some geezer who is on the outside of
> >amateur radio, looking in.
>
> Poor baby, still don't understand, do you?
>
> I've never been "outside radio" for a half century.

YO! LENNIE! Just three paragraphs ago you assailed Dave for
allegedly "taking things out of context", then you BLATANTLY do it
right here!

You HAVE been "outside" of AMATEUR Radio (as clearly stated by
Dave) ALL OF YOUR LIFE!

The physics of what transpire INSIDE the box notwithstanding, you
have exactly zero-point-zero minutes of experience IN AMATUER RADIO.

Amateur Radio is NOT about a fixed set of physics or dynamics of
radio wave propagation anymore than driving your staion wagon is the
same thing as driving for NASCAR.

> You don't play fast and loose with facts. You just don't understand
> real facts.
>
> Not my problem.

Lennie, liars and antagonists are EVERYONES problem...

> Go get "clear."

Do it yourself. You seem to be steeping in "idiot" lately.

The "c-word" is an excuse to do nothing. On some things there may
never be consensus - should the ARRL do nothing? Leadership is
when one has the courage and wisdom to make a sound judgement
and then "do the right thing." Otherwise, they could just do a web vote
popularity contest on every issue and wouldn't need Directors ... the
staff could handle the whole thing ...

> > > 6) W1AW (been there and operated the station, too)

> > I have mixed views on the value of W1AW ... a good museum to "the Old
Man,"
> > but perhaps its services could be provided by alternative means at lower

> > operating cost.
>
> Commercial gear? Why?

Perhaps you misunderstand ... first, W1AW is running commercial gear (and has for
many years). I believe the current main transmitters are super-commercial gear from
Harris Corp., if memory serves me correctly, suplimented by some other commercial
gear donated by some or all of "the big 4" ham equipment mfgrs.

What I was referring to were things like CW practice, bulletins, etc. All of that could
be provided (and much is) by the web site, and probably would reduce operating
costs. (Though doing things by non-radio means is heresy to some ...)

> Carl, you should see the NCI bashing being done by Dee and Jim on the
> other ARRL thread.

I have been on business travel to the ITU in Geneva for two weeks and to New Orleans for a week of meetings and haven't been keeping up.

Let them bash ... NCI continues to gain new members (and the pace picked up quite dramatically with all of the publicity surrounding the Petitions before the
FCC); the membership is, judging by the large number of e-mails I get, happy with our policies and actions and ready to continue to support NCI through the
end-game; and our detractors still haven't presented the FCC with a single rational,
valid, compelling reason to keep any Morse testing ...

And even half-a**ed decent transistors can blow their performance away,
with better ones being worlds better.

My point is essentially that, IMHO, there is too much "nostalgia" and
"let's go back to the past" content in QST. I'd prefer a more bleeding
edge "let's push into the future" approach myself.

> How about reprints of memorable articles from yesteryear? Two from

> come to mind:
>
> "Guys for Guys Who Have to Guy" (a basic paper on guyed towers)
> "Over the Hills and Far Away" (ditto on tropo propagation)

Some articles are ageless ... I agree with the idea of occasionally
reprinting
classics that are still applicable ... or making a compendium of them
available
on a CD-ROM might be an even better approach.

> How many of the "frequent poster" club here read them when they
> first came out or even some time later?

I don't recall them by title, but I probably read them ... my high school
had an extensive collection of QSTs and I spend most of my study hall
time signed out to the library reading QST ... I think I'd read every copy
they had in the collection by the time I graduated in 1967.

So you are saying that in order to show the idiot where the bear went
in the buckwheat that you have to act like the idiot?

Agressive drivers are known to do some pretty insane things. Even if
that piece of incorrect logic would be correct, the aggressive driver
may be "provoked" (in his or her mind) to get even with the person ahead
of him in the lane by doing something like a high speed rear-ending.

"Rewarding" or "teaching a lesson" or "showing them" or whatever doesn't
work.

No thanks, if someone is going to be an idiot on the road, they can do
it in front of me. I'll pull off and let 'em pass!

> OTOH, if "behaving like an idiot" on the road is not rewarded, the

In some states, like Washington, you are in violation if you have 5
cars behind you regardless of the speed, and are required to pull over.

And yes, the police will ticket a person for interfereing with the flow
of traffic.

Code test dissapears, nothing in it's place. I want to see something in
it's place, or else itis pretty hard to argue that it hasn't been made
much much easier to get a license.

You may want it made much easier to get a license, but I don't. Not a
filter, not a way of keeping people out. just a way of ensuring that the
amateur has some level of acumen.

Otherwise, those who want little or no testing are just encouraged.

Siince the Novice license was discontinued, it has become more difficult to become an amateur.

> Not a filter, not a way of keeping people out. just a way
> of ensuring that the amateur has some level of acumen.

I don't hold the opinion that the Morse test established that the applicant has any "level of acumen" (check with Funk and Wagnalls before you respond).

In the world of Amateur Radio there are users and tinkerers. We need more tinkerers, not more users.

Probably so. I would venture that the immediate future debates will be
one last donnybrook over the Morse code testing, and after that is over,
remnants of the testing debate will go on a little while. The final
episodes of this will be when old pro-coders kvetch in similar style as
we occasionally hear from someone that is still incensed over incentive
licensing.

My guess on the debate of the future is one of testing regimen. I
predict that a new movement will arise that views testing per se as an
unnecessary nuisance, and will agitate for simplification of the test,
and eventually it's removal.

Variations on this theme include reducing the qualification process to
signing an affidavit that you have read a book or booklet on the ARS, or
perhaps granting a license after attending an informative seminar.

In the variations, my guess is that most people would prefer to sign an affidavit, because the seminar might take up a big part of their day, while the affidavit only takes as long as writing their signature.

The affidavit route has already been proposed, (NCVEC/W5YI paper) while the seminar was something I just thought of recently.

Of course, the entire new regimen would only work efficiently if there were only one license class, which would be another debate topic.

A biological adult who is acting like a spoiled child.

Remember the scenario Kim describes:

- multilane divided highway
- all vehicles at or above the posted speed limit.
- vehicle comes up behind her, flashes brights, follows too closely,
tries to get around on the *inside* shoulder. IOW, unsafe, aggressive
driving actions intended to intimidate Kim. (as if!!)

Some "adult".

>- an adult that is going to get very angry at a
> person blocking the fast lane while he and others are trying to pass.

Let them behave like adults, then. Following too closely for the speed
of travel is not adult behavior, regardless of what Kim is doing.

> Lets be realistic here.

OK, fine.

It's realistic to behave in a safe responsible way when driving a
motor vehicle.

> If Kim is intentionally blocking others on the roads, she
> doesn't deserve courtesy.

She's only blocking those who want to speed faster than she wants to
speed.

Suppose several cars were to line up side-by-side on a multilane
divided highway and go exactly the speed limit. Would that justify the
"idiot" behaviors Kim describes?

Suppose they were police cars....

> Instead, she is more likely to be a victim of road
> rage (something else she doesn't deserve, but far more likely). If she
> manages to avoid that, and if one of those people she is blocking just
> happens to be a cop, she may instead eventually get a ticket for not driving
> on the right.

Agreed! That's why I previously said I let the "idiots" get past,
because I'd rather have them in front of me than behind me.

But the behavior/reward model I gave is valid. For both children and
alleged adults.

Last time a construction article with Nuvistors in it was when?
Probably 1965 or so. Almost 40 years.

There's an on-line index of QST, QEX and ham radio at the ARRL
website. Searchable by keyword, author, date, author callsign, all
sorts of stuff.

I've read them - first time probably 30+ years ago. At least a few
times since then, too.

Lots of other classics. Having a QST collection helps. ;-)

They hired READEX to do a survey. It was supposedly a scientific
sample of the membership.

That was 1996.

>
> The "c-word" is an excuse to do nothing.

No, it isn't. And it's spelled "consensus", as WK3C demonstrates.

The "c-word" came into use because FCC said some years ago that they weren't going to do any serious restructuring until the amateur radio community came up with a consensus on what they wanted. That policy was quite visibly abandoned in 1998 when FCC issued an NPRM without any consensus being evident.

> On some things there may
> never be consensus - should the ARRL do nothing?

Depends on the issue and how close to a consensus exists. There's a world of difference between a 90% majority and a 51% majority, for example.

> Leadership is
> when one has the courage and wisdom to make a sound judgement
> and then "do the right thing."

Who decides what "the right thing" really is? For example, look at that "21st century" paper (CQ published it, btw, and it was in their mill before I evder saw it, so don't give me a hard time about it). Is the "Communicator" idea "the right thing"?

> Otherwise, they could just do a web vote
> popularity contest on every issue and wouldn't need Directors ... the
> staff could handle the whole thing ...

And if that vote runs opposite to what you think is "the right thing"?

It sounds to me like you're saying the ARRL Directors should sometimes go against what the majority of members say they want. Do you really think that's a good idea?

>

> gear donated by some or all of "the big 4" ham equipment mfgrs.

The transmitters (actually transceivers) used for bulletins and code practice are Harris units. They are stock items. They were chosen for that service because they were capable of total computer control and because they were judged to be rugged enough for W1AW service.

Remember that the W1AW modernization was done more than a few years ago, so you have to look at what was available then, not now.

The supplemental guest stations are for general operating and contesting, and are not used when the bulletin/code practice sessions are being run.

Homebrew transmitters *were* considered - that had been the standard W1AW setup since the station was first put on the air more than 65 years ago. But the cost of paying staff members to design and build such rigs was calculated to be greater than the cost of the Harris units.

> What I was referring to were things like CW practice, bulletins, etc. All
> of that could
> be provided (and much is) by the web site, and probably would reduce
> operating
> costs. (Though doing things by non-radio means is heresy to some ...)

IOW, you want to shut down the station.

The whole point of W1AW is to do those things by *radio*. If we're going to use the website for bulletins and code practice, why not rag chewing, traffic handling, DX chasing, contesting......
>
> > Carl, you should see the NCI bashing being done by Dee and Jim on the

> before the
> FCC); the membership is, judging by the large number of e-mails I get, happy
> with our policies and actions and ready to continue to support NCI through
> the end-game;

And there are how many of them? ;-)

What percentage of US hams do they comprise? ;-)

Point is, the whole "consensus" thing is history. FCC is deciding by different criteria now.

I disagree. There's a good mix now.

> I'd prefer a more bleeding
> edge "let's push into the future" approach myself.

Then write some articles about stuff you'd like to see there. Look at
the bylines of QST construction articles - most of them aren't by
staffers. They're written by hams - like me.

Remember that one of the biggest complaints readers had about QST in
the past was that it was "too technical". So QEX was started, and the
more technical stuff migrated there.

Problem is, such a compendium would compete with the QST CD-ROMs. But
it's still a good idea.

I'd really like to see old and rare ARRL publications on CD-ROM, both
for historic and fund-raising reasons.
>

Yes, sometimes I think it IS a good idea. That sort of activity is often
called leadership.

Other times I think it's NOT a good idea.

The mark of a good leader is determining the difference.

The current issue of QST has some really up-to-date-technology in it, not quite Nuvistors, but well beyond spark.

For example, a full length article on how important the quartz crystal industry was to winning the war. (WW-II, that is!)

Or another full length article on bringing a DX-100 AM transmitter (1955 era) up to factory spec.

Or how about the leading edge article on restoring a 1948 wooden-chassis homebrew 2-tube transmitter?

Hang around, and pretty soon -- perhaps within the decade -- we'll get up to Nuvistor technology!

73, de Hans, K0HB

PS: I almost forgot to mention, there's also some tantalizing information in this issue about panoramic reception, developed in 1932 by F3HM. Maybe it'll catch on!

Ha!!! Yep, and the hilarious thing is that it is only recent that I-20
(don't know about I-10, near Houston, right?) is getting any attention.
Point being: the roads that need the fixin' the most haven't gotten it, and
the roads that are half-way decent are that way because "they" won't leave
'em alone!

Well, I suppose it's valid, Jim. I've really never given the "behavior"
such thought, i.e. analogy, etc. BUT, I am generally a very even tempered
person and I don't feel I'm in any way wrong to stay in the lane I've chosen
to drive in, above the posted speed, safely, forming safe distances between
myself and drivers ahead of me, and never-minding nitwits behind me who
think I should "yield" to them so they can speed faster and keep making each
successive vehicle move.

Ask Phil, he's the one who mentioned them :-) Seriously, I think it was in
the
60's ... but I don't think tube projects have much relevance any more,
except,
perhaps for amplifiers, and you know how I feel about QRO ...

I honestly don't remember ... but well back into the 50's IIRC.

That's what "leadership" is *supposed* to be there for ... to make
the tough calls when the answer isn't necessarily obvious (or may
be right, but not overwhelmingly popular).

> For example, look at
> that "21st century" paper (CQ published it, btw, and it was in their
> mill before I evder saw it, so don't give me a hard time about it). Is

No ... we need more people who understand radio, not more appliance
operators.

> > Otherwise, they could just do a web vote
> > popularity contest on every issue and wouldn't need Directors ... the
> > staff could handle the whole thing ...
>
> And if that vote runs opposite to what you think is "the right thing"?

I wasn't advocating a popularity contest ... just saying that if nobody in
"leadership" has the cajones and good judgement to make the right call,
then it might as well devolve to that ...

> It sounds to me like you're saying the ARRL Directors should sometimes
> go against what the majority of members say they want. Do you really
> think that's a good idea?

Yes ... the leadership should, theoretically at least, have superior
knowledge,
insight, and experience and should be there to guide, not simply be a bunch
of political "yes men" to a majority who may/may not necessarily make the
best
choices in terms of what's in the best interests of ham radio long term.

> > What I was referring to were things like CW practice, bulletins, etc.

No, I wasn't saying that ... I was just "thinking out loud" about what
things
might be more cost-effectively provided by other means.

> The whole point of W1AW is to do those things by *radio*. If we're
> going to use the website for bulletins and code practice, why not rag
> chewing, traffic handling, DX chasing, contesting......

I've always said that the ampr.org domain should be come a much more
integrated, vibrant part of the internet as a whole ...

Hans,

You and I are on the same frequency on this one ... you said it
clearer than I did the first time, but hopefully my explanation was
better in response to Jim's question.

73,
Carl - wk3c

Your earlier comments:

"Dave, I don't have a background in a lot of things (child birth,
international affairs with Belarus, NASA space missions, to name just a
few), but expect to have a voice in those things when I have something
to say and would be darn offended, and very confrontational..."

Please point out the portion in which you state that you're discussing
government policy on child birth, NASA, etc.

> to you?

Not at all. Opinions become suggestions all the time. Are you familiar
with Len's lengthy submission to the FCC regarding the morse test?
Would you believe his words could be construed as being suggestions to
the FCC? Would they be considered as Len's opinions?

> > (snip) Don't expect others to greet your views

That's what you wrote, alright. I pointed out that morse use is not
declining in amateur radio. Amateur radio is certainly part of the
radio world.

> Considering far fewer people in radio today are using code compared to just
> few decades ago, that isn't exactly an astonishing revelation, is it?

> code testing.

The needs of other radio services? What need has any other service to
tell hams which modes to use? How would a great number of hams using
morse be less worthy of the "massive" frequencies we have for our use?

> The FCC did exactly that in the Report & Order following the last round of

> communications, fiber optic communications, high definition television
> systems, and police, fire, and rescue communications. In that Report &
> Order, the FCC stated that "...no communication system has been designed in
> many years that depends on hand-keyed telegraphy or the ability to receive
> messages in Morse code by ear"...

Simple statement of fact. No new system has been developed. Yet
thousands of radio amateurs use morse daily.

> and that "...the emphasis on Morse code
> proficiency as a licensing requirement does not comport with the basis and
> purpose of the service." Finally, the FCC said, "...reducing the emphasis on
> telegraphy proficiency as a licensing requirement will allow the amateur
> service to, as it has in the past, attract technically inclined persons,
> particularly the youth of our country, and encourage them to learn and to
> prepare themselves in the areas where the United States needs expertise."

Yup. Five words per minute isn't exactly emphasis on morse, is it?
Technically inclined people didn't let a morse test stop them in the

past and don't seem to let it stop them now. Much of the youth seems
busy downloading MP3 files and playing computer games.

> In
> my opinion, the exact same argument could be made for eliminating telegraphy
> proficiency as a licensing requirement.

Maybe it could--if you believe that 5 wpm constitutes "emphasis".

That means passing the post-restructuring 35 question Tech test is "more difficult" (YMMV on what constitutes "more difficult") than passing both the pre-restructuring 30 question Novice test *and* the 5 wpm code receiving test.

Sunuvagun!

> amateur radio" or that he even knows "what is best for amateur radio."

Jim, I have to disagree. The very fact that Len submitted his ideas on morse testing and a minimum age for amateur radio licensing to the Commission demonstrates that he believes that he knows what is best for amateur radio, in which he has never been a participant.

Leonard has, on occasion, tried to have it both ways. He has told us that he was going for an "Extra right out of the box" and, in a turnabout, that he really isn't interested in obtaining an amateur radio license. He has written of his decades-long interest but he has never even attempted to obtain even a code free ticket.

Truth is, when I'm chasing S92SS on 160, when I'm checking into the WV Fone Net or when I'm reading the latest QST, I don't give Leonard a thought. He wasn't a part of amateur radio's past, isn't part of its present and, I'm guessing, won't be part of its future.

Okay, who made her the arbiter of how fast the lane travels? Kim has no more the right to limit other drivers speed than I do to limit hers, if I were to try the same tactic.
> Suppose several cars were to line up side-by-side on a multilane

Nope. Nothing ever justifies idiot behavior.

> alleged adults.

Another model I can think of for this kind of behavior is when a person feels stressed out, out of control, and is in a bad mood. The other drivers, those going faster or slower are an irritant. You're traveling along, and someone comes up behind you and invades your "auto persanl space". You can exert just a little smidgem of control, and spread a little stress on the other driver by taking just a liiittlle biit looonggerr to get out of his/her way. If you get them to react to you, short of provoking a roadrage incident, you get a little dose of satisfaction.

I'll bet everyone here has done something like that one time or another.

And as George Carlin points out:

Have you ever noticed? Anybody going slower than you is an idiot, and anyone going faster than you is a moron.

Yep. It's the annual "vintage radio" issue. Says so right on the cover.
>
>For example, a full length article on how important the quartz crystal
>industry was to winning the war. (WW-II, that is!)

Yep. It's the annual "vintage radio" issue. Says so right on the cover. Radio grade quartz was mined back then - today it's grown.
>
>Or another full length article on bringing a DX-100 AM transmitter (1955
>era) up to factory spec.
>
Yep. It's the annual "vintage radio" issue. Says so right on the cover.

The DX-100 was basically a bargain version of the Viking 2/ 122 VFO combo in one box. Not as good, though. YMMV.

The article tells how a ham bought an old Heathkit rig on eBay, fixed it up, and put it on the air. Looks like he had fun doing it, too. Rig was actually Made In USA, and the present owner actually worked on it hisself. Very electro-politically incorrect.

>Or how about the leading edge article on restoring a 1948 wooden-chassis
>homebrew 2-tube transmitter?

Yep. It's the annual "vintage radio" issue. Says so right on the cover.

The DX-100 was basically a bargain version of the Viking 2/ 122 VFO combo in one box. Not as good, though. YMMV.

The article tells how a ham bought an old homebrew rig on eBay, fixed it up, made a few modifications and put it on the air. Looks like he had fun doing it, too. Rig was actually home-built by a ham - not even a kit. Parts were all Made In USA, and the present owner actually worked on it hisself. And it puts out a perfectly clean signal. Very, very electro-politically incorrect, though.

How dare these hams actually work on their own rigs! Next thing you know,
they'll be turning their backs on Ikensu....

I recall about a decade ago when the IC-781 appeared how gaga some folks were
over the display. As if nobody had ever done it before. Shades of the QS-59
receiver....

Also in the same issue of QST:

- Article on using a transmitter-receiver modules to eliminate the key cable
(tail wagging the dog..)

- 5 page article on the K1B Baker Island DXpedition

- Article on contesting as a "little pistol"

- Article on "casual" RTTY contesting

- "Short Takes" column on MultiPSK freeware package (does several flavors of
PSK, SSTV, RTTY, AMTOR, Hellschreiber, and (oh yes) CW

- 3-1/2 page article on building an AC wattmeter

- 2 page "Hands On Radio" column. This is #12 in a series - subject is FETs.

- 2 page "Hints and Kinks" column.

- 5 page review of the Ten Tec Orion

- 2 page review of the SGC add on audio DSP unit (ADSP2)

- Correspondence from Members, Happenings, Technical Correspondence, Public
Service, DX, Exam Info, World above 50 MHz, At The Foundation, Old Radio, YL
News, SKs, New Products, 75/50/25 years ago in QST, Contest and hamfest
calendars, W1AW schedule...

- Microwavelengths (Part 1 of an article about microwave LNAs - no nuvistors in
sight)

- Results of June VHF contest, School club Roundup, August UHF contest.

- and more. 160 pages this issue.

How many articles of cutting-edge technology have you submitted?

Thank you, Thank You, THANK YOU!!! You make my point exactly!!!

I'm very much an ARRL supporter, but an "Annual Vintage Radio Issue" is a pathetic statement about the technical leadership out of 225 Main Street. Sorta validates LHA's persistent jeremiads about how backward amateurs seem to him. How much nicer if there were an "Annual Future Systems Issue".

really? The most difficult thing for me in Amateur Radio was to learn Morse code. It would have taken me just as long to get a Novice as it would to get my General ticket.

>
>>Not a filter, not a way of keeping people out. just a way

acumen: keenness and depth of perception, discernment, or discrimination especially in practical matters.

Sounds good to me Hans, although it was from Merriam Webster, not Funk and Wagnalls. Any other corrections to make to my posts?

I'm a firm believer that we need to ensure that the prospective amateur is *interested* in the hobby. No question to me that the old Morse code test went some way towards that. That's not a filter. Making a prospective ham have to stand up against a tree while other hams throw eggs at him/her before a license is issued is a filter.

The Morse code is almost certainly going away. I don't really give a good rat's backside about it. So now we are arguing about whatever word you want to use instead of acumen. I desire more, and you appear to desire less.

No it doesn't. I've used consensus building for years. I don't do it unless a decision *needs* to be made. I even use it in situations where I have absolute dictatorial power, such as on my Ice Hockey team. I find out what the guys think on a lot of the issues. Then as long as it makes sense, and is within the rules I'll decide what they like. You'd be surprised how well they listen to you when they *need* to when you listen to them when you *should*.

Other BOD activities I've been involved in are run the same way - although I don't have absolute power there! 8^)

> On some things there may

Sure, ya have to do that sometimes. Problem is that if you use that courage and wisdom in the wrong way, you can find yourself on the outside pretty quickly. Then you're a leader with no flock. No leader at all.

> Otherwise, they could just do a web vote

familiar with web voting?

> popularity contest on every issue and wouldn't need Directors ... the
> staff could handle the whole thing ...

Leaders get usually get elected or appointed or whatever because they have some values that appeal to those who are to be governed. The most successful leaders I know ask for and get as much input as they can when faced with decisions. Figuring that you know the answers and what you know is right regardless is hubris.

I really enjoy the old timey stories. And I'm not an old time ham,
being first licensed in fall of 1998.

And you might think of writing some articles. (forgive if you already
have, I've only read QST for a short time now)

I'd love to see cutting edge stuff, although I would prefer emphasis on
RF instead of digital.

Why should there be anything in its place? This isn't about
some mystical quantification of effort, dedication, yada yada....
The morse tests have completely disappeared for General
and Extra without anything taking its place. If 5 wpm is dropped
for tech, why should there be something to replace it?

> I want to see something in
> it's place, or else itis pretty hard to argue that it hasn't been made
> much much easier to get a license.

Ending a requirement that no longer has a rational need
does not translate into a search for some "replacement".
If you had the opportunity to state what the replacement

should be, what would you suggest?

> You may want it made much easier to get a license, but I don't. Not a
> filter, not a way of keeping people out. just a way of ensuring that the

Ending morse doesn't change the level of written tests.

> Otherwise, those who want little or no testing are just encouraged.

Encouraged about what?

> >>Instead, some

> W5YI for one. I trust you have read his work?

W5YI's comments as to testing issues beyond the elimination
of code testing are NOT, in any way, shape or form,
the position or opinion of NCI.

As to other NCI members, assuming you can ID someone,
they too may have a personal belief as to how testing should go...
but that does NOT make their opinions or beliefs NCI
doctrine.

But for several years the FCC was quite happy to
avoid the issue based on the "consensus" argument.
By 1998, the writing apparently was on the wall
in the FCC that there probably was no rational reason
to retain code testing. The FCC then gave pro-code
advocates the opportunity to provide reasons for
code testing and for various code speeds. The pro-code
arguments were insufficient and all were denied
by the FCC as being rational or otherwise justifiable.

> (as if!!)

That's your (and/or perhaps Kim's) interpretation of the scenario. Others may interpret it as Kim being an inattentive driver that is not acting courteously to others by driving to the right, causing others to take extraordinary steps to get her attention back on the road and courteous driving (with extraordinary steps being necessary to get someone to drive courteously only adding to the fustration of other drivers).

> She's only blocking those who want to speed
> faster than she wants to speed.

Exactly. However, as you well know, she doesn't have a mandate, or a right, to self-enforce how fast others drive. Instead, she has the same obligations as other drivers, including an obligation to move to the right to allow others to pass. If others are driving too fast while doing so, that is law enforcement's business - not the business of a self-styled road vigilante.

> But the behavior/reward model I gave is valid.
> For both children and alleged adults.

I disagree. For it to be valid, you would have to establish there is nothing more than childhood impulse behind the decision drive fast - impulse that can be easily modified by simple rewards. And you haven't established that. Adults can make decisions based on some level of knowledge, experience, and review of the situation, not impulse. In the case of fast drivers, perhaps the driver feels, based on a consideration of his/her skills and experience, that he/she can drive safely at faster speeds. For example, I've driven many thousands of miles on German autobahns, and know full well I can drive safely at speeds faster than 55-65 mph (therefore only the laws and conditions attenuate my driving speeds). Perhaps the person has a legitimate reason for driving faster. For example, the driver may be taking someone to the hospital (and Kim is blocking his way). I could go on, but these examples alone should make it clear that not all are acting solely on impulse that can be easily modified by simple rewards.

>
> I am not "intentionally" blocking anyone,
> Dwight. I am driving. That's all.

But if you are intentionally not moving to the right, not yielding to others trying to pass, that is not all. If Texas is like many states, you have a legal obligation to drive on the right to allow others to pass. There is rarely an exception which allows you to ignore these laws when you feel it is justified - when you feel others are driving too fast or you feel others are violating the laws, for examples. It is true these laws are rarely enforced, but that doesn't mean they're never enforced. For example, you will most often see these laws enforced when there are multiple car accidents where the slower vehicle causing the congestion necessary for this type of accident is ticketed (with that driver being responsible for the damage to all vehicles involved).

>but an "Annual Vintage Radio Issue" is a
>pathetic statement about the technical leadership out of 225 Main Street.

Why is it "pathetic"? A significant number of hams are interested in "vintage" radio. Just like a significant number of people like antique furniture, classic cars, oldies music, past films and books, vintage clothing, etc. Doesn't mean they are "stuck in the past".

I know a 9 year old who is fascinated with Louisa May Alcott's "Little Women" - both the book and the 1949 film version. Is that "pathetic"? How about folks who restore and drive classic cars like 1960s Corvairs or Triumphs?

>Sorta validates LHA's persistent jeremiads about how backward amateurs seem
>to him.

The organ grinder plays the same few tunes over and over. No matter what we hams did, or what the ARRL published, we'd get the same jeremiads from him. He's not involved. Anyone can sit on the sidelines like he does.

>How much nicer if there were an "Annual Future Systems Issue".

Why not? Isn't there room for both?

How many articles have there been in QST over the past few years on PSK, MFSK, WSJT, digital voice, IRLP.....?

How many articles on "future systems" have you submitted? Or anyone else here, for that matter?

You say you want more "tinkerers". At least the vintage radio folks are tinkering, and have an idea how their rigs work. They aren;t just buying and plugging in, with no concept of what goes on behind the panel. Isn't that a step in the right direction?

I think one reason "vintage" radio has gained popularity is that many hams *want* to be knowledgeable and skilled in the technical side of radio, but the "future systems" stuff is too sterile and too inaccessible to them. Look at old radio mags and see how many "Build This Radio!" articles there were, describing receivers and transmitters that could be built by someone with a few tools and some basic knowledge. How much of that do you see in amateur radio magazines today?

If a 50+ year old transmitter on a wooden chassis can put out a legal signal and make QSOs, what't the problem? Guess we've got to keep that sort of thing secret - might cut into Ikensu's sales....

Yes, those are my earlier comments - which you've disingenuously taken out of context. That paragraph was a reply to words you wrote about code testing - a government policy. The message that paragraph appeared in was about code testing - a government policy. The discussion that message appeared in was about code testing - a government policy. Please show me where, in all that, there was even a hint that we were not talking about government policy.

> The needs of other radio services? What need
> has any other service to tell hams which modes
> to use? How would a great number of hams using
> morse be less worthy of the "massive" frequencies
> we have for our use?

This is not, and has never been, about the "use" of code, Dave. This discussion is about a testing requirement. And, from that perspective, I've already addressed other radio services in my last message. But, since you seem to have missed it (or decided to chop it up rather than look at it as a whole), I'll repeat it here...

As I've already stated, if we're going to
remain a valuable radio service, worthy
of the massive frequencies we hold and
unlike personal radio services (CB), we
must consider the needs of the other
radio services when discussing any
licensing issue - including code testing.
The FCC did exactly that in the Report
& Order following the last round of

restructuring when they looked at
personal communication services, satellite
communications, fiber optic
communications, high definition television
systems, and police, fire, and rescue
communications. In that Report & Order,
the FCC stated that "...no communication
system has been designed in many years
that depends on hand-keyed telegraphy
or the ability to receive messages in Morse
code by ear" and that "...the emphasis on
Morse code proficiency as a licensing
requirement does not comport with the
basis and purpose of the service." Finally,
the FCC said, "...reducing the emphasis
on telegraphy proficiency as a licensing
requirement will allow the amateur service
to, as it has in the past, attract technically
inclined persons, particularly the youth of
our country, and encourage them to learn
and to prepare themselves in the areas
where the United States needs expertise."

> Simple statement of fact. No new system has
> been developed. Yet thousands of radio amateurs
> use morse daily.

Again, this is not about the "use" of code, Dave. Those same radio
amateurs, and any others who want to join them, can and will continue to
freely "use" code long after any testing requirement is gone.

> Maybe it could--if you believe that 5 wpm
> constitutes "emphasis".

It is "emphasis" compared to the other operating modes, and compared to
where this country needs expertise (see FCC statements above).

I don't think so, Mike. While I do see comments here and there, I don't see a growing consensus for a need to change the written tests, much less a growing consensus on any specific change to those tests. I suspect the vast majority would agree those tests are needed and are just fine as they are. Instead, I hope we can finally focus on more fully using the frequencies we have. Of course, I don't see any growing consensus for that either, but one can hope.

Is it really too much to have one issue out of 12 address vintage radio?
Afterall there are some hams to whom this is of interest either practical or
just as a window into history. Although my own interest is in new radios
and how much they can pack into how little space, the vintage issue is a
nice relaxing look at the past.

Sure. In one group I was the director of, I directly defied a board decision, reinstating something that they revoked. But even then, I relied on the input of the people that were affected by the board's decision. They were displeased by the decision, and appealed to me to do something. They were right, so I did it. Then offered my resignation to the board for the defiance. (being a leader does not give you unlimited power)

Oddly enough, my offer was unanimously rejected. I think the rest of the BOD was actually relieved.

But the occasional and very uncomfortable times that you have to stick your neck out does not releas you from a obligation to listen as often as possible.

Of course not. But they still have to represent their constituents. In
our locale, we have had a number of County commissioners that believed
they had the right ideas, to the point of ignoring what a large majority
of the citezenry wanted, and with their "leadership" saddled the county
with a huge new and unnesesary project and the billing therof.
Commisioner 1 was the lowest vote-getter in the next election, and
commisioner two was smart enough to not run again for that office. THe
only one re-elected was the sole commissioner who voted against the project.

These people displayed your kind of "leadership". Once.

While the Houston area was bad, driving on I-20 around El Paso was a nightmare. The highway has a washboard effect which feels like it's shaking your vehicle, and you, apart. You honestly have to clench your teeth to keep them from clattering. And, after about twenty miles of that, I had to stop because my hands were getting numb from the shaking steering wheel.

I mentioned I-5 in Norther California before. On sections of that highway, the road has cracked and been pushed up from the changing weather (extreme heat in summer and snows in winter). As a result, there are six to twelve inch humps in the road about every ten to fifty feet. And, if you drive the speed limit, you can feel your tires leave the road and slam back down on the opposite side of each hump. Even if you slow down, you're still tossed around in the vehicle on the larger humps. Anyway, since I was pulling a fairly heavy trailer through that section of highway, the experience was not at all pleasant.

Those two sections of highways stand out in my mind from the last trip. The other thing that stood out was the traffic congestion near each major city. LA traffic has been a nightmare for many years and it seems to be getting worse. Houston has major traffic and darn poor road signs. Each time we drive across country, the traffic always feels like it is getting worse.

Hello there Hans ......

Again I have to say that our service, hobby, endeavor, passion, pastime, escape or whatever description or definition one makes is like the blind men and the elephant. Each have a part and use their senses-perception to come up with a concrete explanation of what they have. Ham radio is like this .... and it is a strength not a weakness.

I know a lot of fellows will say that the service is strictly defined by the FCC. That is a given but it has evolved into other areas. Kudos to the ARRL for a nostalgia issue or any topic issue that generates interest.

I really think it is myopic to beat that "technical" horse as a lot of fellows are not as interested as others ... part 97 or not. Grabbing the technical end of the elephant and saying it is more important for the future just may not be the case ....I don't know. Technology will come and be absorbed by future hams more on the basis of modification of use rather than basic "new" discoveries.

Like it or not the "marketplace" drives the existence of publications. I used to subscribe to Ham Radio .....if it was "that good" then we would still be getting it. The technos aspect just didn't ring enough ham bells out there.

I'd like to say to all on the newsgroup .... Merry Christmas and the best for 04

I can't agree. I enjoy articles about vintage rigs. There is every
indication that there are many others who enjoy them. I collect vintage
rigs and restore them.

> Sorta validates LHA's persistent jeremiads about how backward amateurs seem
> to him. How much nicer if there were an "Annual Future Systems Issue".

While I enjoy my vintage equipment, I don't use it every day. I run a
Ten-Tec Orion. It is something from the present which was very much the
future only a few short months ago. Len likes to prattle about ancient
morse code yet most of us don't stick with only one mode. I discount
Len's rants heavily since he isn't really involved and has little idea
what radio amateurs are doing.

I've though of writing an article or two for QST myself. Probably
wouldn't be cutting edge. Most contributions I could make would be
geared toward homebrewing, and most likely on panel layout technique,
ergonomics and (gasp) aesthetics. If they print an article about doing
panels in Powerpoint, the state of Amateur radio equipment layout could
use the boost.

Hans would probably still make fun of it tho'! ;^)

The Finnish government is made up of numerous political parties. There
isn't much difference between most of them. Finns have typically
governed through concensus politics. This has been their way for
decades and they seem to have less trouble in getting things done than
we do.

As Phil Kane pointed out, there have been occasions when a "leader" in
the ARRL has been recalled. There've been other occasions when an ARRL
leader has been ousted in regular elections.

> Carl - wk3c

Carl, that's the one aspect that I have found the most disappointing
about the ARRL leadership, they "governed" - like Clinton - with
polls.

Their big poll was one of the most poorly constructed polls I've ever
seen. Even worse is that they paid an outside agency to do it - with
our dues money. The fact that -I- helped pay for that poll and I
didn't even receive a questionaire was just icing on the cake.

I never saw the ARRL vision of the future as anything other than old
men in Western Union garb tapping away at their keys. That should be
their vision of the past, not the future. Repeating the past over and
over again gets the ARS where? One more tube regen receiver article
will likely put me over the edge.

I know the ARRL is a superb watchdog concerning legislation that affects the ARS. They are also the best publishing house on radio related material. Their lab reviews are unrivaled. And their operating activities are lots of fun. Thus, I continue to support the ARRL.

But with respect to the future, just about any decision is better than no decision.

73, Brian

There was nothing disingenuous about anything and there was nothing in your earlier statements to indicate that you were discussing government policy. If I wanted to make it clear that I was speaking of policy, I might have written something like, "I don't have a background in NASA policy or child birth policy". Child birth policy doesn't seem to make much sense does it?

Show me that your words indicate in any way that you were discussing child birth policy or NASA policy.

That isn't what your words say. Look at 'em and see if you can find any
words about morse *use*. If you can't find them, perhaps I can provide
a quote.

I strongly disagree that a five word per minute morse test indicates emphasis. Additionally, nothing precludes anyone from developing expertise though "where this country needs expertise" hasn't been defined. If you'd like to take the position that a five word per minute code test is a huge hurdle for those who could develop some technical expertise if they could only obtain HF amateur radio access, I'll play along.

Its tough being a leader. You can never make everyone happy. But
doing nothing is likely to piss everyone off.

Otherwise, they could just do a web vote
> popularity contest on every issue and wouldn't need Directors ... the
> staff could handle the whole thing ...

They probably are handling it. ;^)

I've use Harris gear in the service.

How about a prolonged lab test on real amateur gear? Or are the
operations at W1AW really too severe for amateur gear?

> What I was referring to were things like CW practice, bulletins, etc. All

I honestly have no problem with the transmissions. Perhaps W1MAN
could contact with the ARRL to put out his bulletins and stop the
duplicity.

Perhaps I was a bit rash in that statement.

They needed an alternative to the status-quo.

and our detractors still haven't presented the FCC with a single
> rational,
> valid, compelling reason to keep any Morse testing ...

Aaron Jones was keeping the list of Morse Myths, and he's been silent
for a couple of years. There must be nothing new to debunk.

Jim, why do you say "supposedly?"

Do you, like me, also disagree with Mike Deignan that the ARRL survey
was "substantive?"

Huh? ARRL has several specialty issues, and many hams enjoy the Vintage radio issue. Myself included. Maybe you could write a cutting edge article or two? Want a future systems issue? get in touch with them and suggest it.

You are kind of right there Bill. I can prove to you without a doubt
that a person can get on the air without ever taking a test. They can
get on the air and run relatively high power without doing harm to
themselves. There is no need for any yada yada at all.

It isn't mystical, it isn't yada yada. It is philosophy. And my
philosophy is that the amateur should want to be an amateur, and should
have some level of knowledge in order to be there.

> The morse tests have completely disappeared for General
> and Extra without anything taking its place. If 5 wpm is dropped
> for tech, why should there be something to replace it?

Now I'm a little confused. As far as I know, if you want a general or
above, you still have to take a Morse code test. And they don't do tech
plusses any more. My Tech license had no code test in it.

>
>>I want to see something in

> If you had the opportunity to state what the replacement
> should be, what would you suggest?

I support strengthening the tests. In general, I want more questions on
theory, and more procedural questions. I wouldn't mind if there were a
ham etiquette section added to the test.

I want the new ham to come on board with some idea of what is expected
of him or her in the way of how to conduct themselves on the air. I want
them to have at least a rudimentary knowledge of electronics, and know
some basics on antenna theory, like our "quarter wave dipole" discussion
on rrap of a few months back proves is needed.

I'm not talking about NCI, I'm talking about NCI members. There is a
difference. As far as I know, NCI has no official opinions beyond ending
the Morse code test.

They already have a monthly feature called "Old Radios" and "75/50/25 Years Ago", and now a special "Vintage Radio" issue each year besides? Maybe we could do a photo-feature of "The Girls of Geratol Net" with a centerfold for those of you who get off on old stuff. (Yes, Virginia, there really is a "Geratol Net"!)

Here you have a pattern, Jim. As much as I like the new modes, All they
are is install the software and hook up the interface. Troubleshooting
is which software switch to change.

> How many articles on "future systems" have you submitted? Or anyone else here,

I just restored an SB-200. It was great fun resurrecting the old thing,
and I learned a lot about RF amps. They were a mystery to me, and now I
know their simplicity.

> I think one reason "vintage" radio has gained popularity is that many hams

Another way of enjoying the hobby! Now that I am getting my Morse code
up to acceptable speed, I intend to build one of these old sets. I'm
looking forward to working as much as possible while the new hams with
their Ikensu's will be coming on the air at just about the minimim of
the sunspot cycle are trying out their ssb and wondering what all the
fuss about ham radio was about!

No problem at all if you want to waste your time with that, but to have the National Association of Amateur Radio feature half century old technology as feature article(s) in their membership journal speaks volumns.

&#65533; 97.1(b) Continuation and extension of the amateur's proven ability to contribute to the ADVANCEMENT of the radio art.

Let me state it another way.

Suppose someone thought that "what was best for amateur radio" was for the service as we know it to die out. Do you think they'd actually come right out and say that?
>
>Leonard has, on occasion, tried to have it both ways.

Not "on occasion". Frequently.

>He has told us
>that he was going for an "Extra right out of the box" and, in a

Of course! Those darn new question pools.....!

Do you really think anything he writes here is to be taken seriously? Or, for that matter, anything he writes?

>He has written of his decades-long interest but he has never
>even attempted to obtain even a code free ticket.

Because radio isn't his interest or his hobby. His hobby is wasting time - your time.
>
>Truth is, when I'm chasing S92SS on 160, when I'm checking into the WV
>Fone Net or when I'm reading the latest QST, I don't give Leonard a
>thought.

Nor do I.

Ever read "The Fountainhead" by Ayn Rand? There's a great little scene where the hero (Howard Roark, a talented architect) meets his nemesis (Ellsworth Toohey, an architectural critic whose only talent is clever wordsmithing that denigrates others' accomplishments . Toohey is the kind of fellow who would refer to others as "Nursie", "Kolonel Klunk" and "Rev. Jim"..). Toohey wants to destroy Roark, and tries all sorts of tricks to ruin him. Toohey has never been an architect - he's not involved - but through various tricks he's manuevered himself into being a commentator on architecture.

They meet when Roark goes to see a building which he (Roark) had designed, but which Toohey had caused to be modified horribly - at Roark's expense. Toohey talks a lot and finally asks Roark what he thinks of him.

Roark replies "But I don't think of you"

Sound familiar?

>He wasn't a part of amateur radio's past, isn't part of its
>present and, I'm guessing, won't be part of its future.
>
Of course not! That isn't his goal.

Remember the profile? Have you seen any behavior that doesn't match that profile?

Why not?

Is there something wrong with using older technologies?

>except,
>perhaps for amplifiers, and you know how I feel about QRO ...

Purely an emotional thing, then.

Some hams recently have set new records by working EME on 24 GHz using small
(two-metre-diameter) dishes and power outputs of 100 watts or less. Neat stuff.
Their transmitters used transmitting wave tubes. I'll let you guess the
mode....

HAW! If you graduated in 1967, and the collection went back to, say, 1952,
that's 15 years. Like someone today with a collection that went back to 1988.
While certainly worthwhile and useful, I'd hardly call a 15 year collection
"extensive"...

If you don't like what's in QST, why not write some articles featuring things
you'd like to see? Heck, they published some of my stuff - they can't be *that*
fussy! ;-)

Well, there you have it. Element 1 is easier than 5 questions on the written test.

>(But only barely, and it is woefully inadequate for the resultant
>privileges.)

Woefully inadequate? FCC disagrees! In fact, in 2000 FCC drastically *reduced* the written testing needed for a Tech. From two tests and pools, frowm which were derived tests with a total of 65 questions down to one test of 35 questions and a combined pool.

FCC thinks that 35 question Tech test is adequate. The same FCC that sees "no regulatory purpose" in code tests.

Is FCC mistaken?

Sorry, Hans, I thought you had an engineering background. ;-)

I'll rephrase:

Have the changes of 2000 resulted in more tinkerers entering the ARS in a given time period (say, per year) than before the changes were made?

Are you aware of what the GERATOL net is all about? It doesn't sound like it from your post. They are an organization of and for Extra class amateur radio operators and promote usage of the Extra class band segments by an award program. The awards add difficulty to the pursuit since only stations worked in the Extra segments count for their equivalent of Worked All States, etc. It has nothing to do with age.

Besides that PSK, MFSK, WSJT, digital voice, and IRLP are not "future systems". They are here now. A "future system" would have to be something envisioned but not yet set up in hardware and software to do it. In other words, it would need to be an issue of speculation. Now whether that would be good or bad or popular or unpopular, I don't know.

Thank you

>I've really never given the "behavior"
>such thought, i.e. analogy, etc.

Think about it. You've dealt with children - isn't it true that they will tend to repeat behavior that gets them what they want? If whining works, don't you get more whining?

It's illogical to think that sort of thing isn't present in adults.

>BUT, I am generally a very even tempered
>person and I don't feel I'm in any way wrong to stay in the lane I've chosen

Would you agree that if you *do* yield, you validate their behavior and in a small way encourage them to do more of it?

Personally, I move, because I care more about my own safety. But that's just me.

>extraordinary steps to get her attention back on the road and courteous
>driving (with extraordinary steps being necessary to get someone to drive
>courteously only adding to the fustration of other drivers).

Hmmm...

She's going with the flow of traffic, *above* the posted speed limit, but she should slow down and change lanes so that someone who wants to go even faster can get by?

She's not being "courteous" enough to do the above, so that somehow validates the dangerous actions of another driver (following too closely, trying to pass on the shoulder)?
>
>> She's only blocking those who want to speed
>> faster than she wants to speed.
>
> Exactly.

Well, there you have it.

>However, as you well know, she doesn't have a mandate, or a
>right, to self-enforce how fast others drive.

Nor do *they* (or Kim) have a right to speed.

>Instead, she has the same
>obligations as other drivers, including an obligation to move to the right
>to allow others to pass.

Where is it in the motor vehicle code that a driver on a multilane divided highway has to change lanes and slow down to allow a speeder to pass in a non-emergency situation?

>If others are driving too fast while doing so, that
>is law enforcement's business - not the business of a self-styled road
>vigilante.

It's everyone's business.

>> But the behavior/reward model I gave is valid.
>> For both children and alleged adults.
>
> I disagree. For it to be valid, you would have to establish there is
>nothing more than childhood impulse behind the decision drive fast - impulse
>that can be easily modified by simple rewards.

The behaviors described by Kim go far beyond driving fast. They are obviously childish - and often dangerous. Following too closely is simply unsafe.

If you think childish impulses are easily modified by simple rewards, you obviously haven't spent much time with impulsive children.

>And you haven't established
>that.

It's self-evident.

>Adults can make decisions based on some level of knowledge,
>experience, and review of the situation, not impulse.

Of course!

But the behaviors Kim describes are not those of a responsible adult.

>In the case of fast
>drivers, perhaps the driver feels, based on a consideration of his/her
>skills and experience, that he/she can drive safely at faster speeds.

The driver *feels*?

So the driver's *feelings* supersede the judgement of the traffic engineers and lawmakers who determine the posted speed limits?

I'd like to see that argument defended in court!

My daily commute to work is often made longer by school buses and school zones. It's gotten so I know exactly where the zones, the children, and the bus stops are. Is it adult behavior for me to go faster than 15 in a school zone, or zoom past a bus with its red lights flashing, because I *feel* I can do so safely?

Or how about the ham who *feels* he "needs" 10 kW output? Suppose said ham can safely assemble and operate a 10 kW transmitter that meets all of the FCC

requirements for spurious emissions and RF exposure. Is it therefre OK for him to do so because he *feels* it's OK?

>For
>example, I've driven many thousands of miles on German autobahns, and know
>full well I can drive safely at speeds faster than 55-65 mph (therefore only
>the laws and conditions attenuate my driving speeds).

You know you can do it on German autobahns. But we're not in Germany. You want to drive faster, go to Germany.

>Perhaps the person has
>a legitimate reason for driving faster. For example, the driver may be
>taking someone to the hospital (and Kim is blocking his way).

Sure. That's an emergency situation. But Kim says it's an every-day thing. Hardly an emergency. And if there's only one person in the car....

>I could go on,
>but these examples alone should make it clear that not all are acting solely
>on impulse that can be easily modified by simple rewards.

The only valid counterexample you give is the emergency case.

I don't exactly agree with Kim's behavior either, because a person who is childishly impulsive enough to do what she describes may do other, even more dangerous things. And I don't want Kim (or me) to be a victim of someone else's childish impulses.

Another argument for the no test agenda:

We regularly hurtle at each other at combined speeds of 150 miles per
hour and more, wearing nothing but street clothes, and strapped into
devices carrying a large load of almomst explosivly flammable liquid.

And we're afraid to let people run radios that are putting out the same
power as the microwave oven over my stove?

Most of the tinkerers I know are pro-code test amateurs. Mine isn't a scientific survey, but I've noticed a common thread among them. They are very interested in RF technology. They are intensely interested in Amateur radio. They really like getting their hands down into the equipment. And whether this is related or not, they are also very interested in Morse code. I've seen some cutting edge stuff made by these same people.

I do not know one technician that has done as much as build his or her own antenna. Well wait, I built a 1/4 wave ground plane for 2 meters when I was a Tech. But that's it.

Based on that admittidly small sample, I would have to say that we are putting out less tinkers per unit time, and almost certainly less per hamcapita. (Hans, that means tinkerers per total numbe of Hams. 8^))

Tuning through one evening, I came across the net. After hearing it was the Geratol net, I perked up. This might be worth a few minutes of weird fun, hearing about peoples bunions and hernia operations. Nothing! a regular net, except for one person who asked how anothers wife was doing. "much better thank you" was the answer, then went on to net business.

Sunnavgun!

They are mistaken on point one. They are correct on point 2.

> Have the changes of 2000 resulted in more tinkerers entering the ARS in a
given
> time period (say, per year) than before the changes were made?

I have no way of knowing for sure. Neither do you. It is my belief,
however, that the diminished emphasis on technical issues in the test, along
with the 'Ham Press' lack of emphasis on technical matters, is making the
Amateur Radio service less effective in recruiting those of an experimental
and tinkering bent.

I don't think they even think of it. If you don't move, they will pass
on the right. I've seen berm passing both right and left. They are
idiots, and probably wouldn't understand anything subtle.

I wonder if any of them realize why it takes so long for the officer to
issue them the ticket? Slowing the jerks up by a half hour or so in
addition to lightening their wallet is somethig they understand.

There are many and varied definitions of "consensus" among the newsgroupies in here. In the main, they consider "consensus" as being anything that they and their close acquaintences agree upon.

:-)

I did that 50 1/2 years ago. No test. Nothing involving morse
code. 43 transmitters of 1 KW or higher RF output.

>They can
>get on the air and run relatively high power without doing harm to
>themselves. There is no need for any yada yada at all.
>
>It isn't mystical, it isn't yada yada. It is philosophy.

It's ALL about mystique in amateurism. :-)

Mystique. Class distinction. Strict adherence to old tradition
established by long-gone old-timers of another era.

>And my
>philosophy is that the amateur should want to be an amateur, and should
>have some level of knowledge in order to be there.

MYSTIQUE again!

All shall meet the requirements of the collective group mind, NOT
that of the government entity doing the licensing.

>> The morse tests have completely disappeared for General
>> and Extra without anything taking its place. If 5 wpm is dropped
>> for tech, why should there be something to replace it?

>plusses any more. My Tech license had no code test in it.

God didn't ordain that a morse code test was necessary for an
amateur radio license. It is just a government regulation that
hasn't been taken off the law books. Some of us are trying to
eliminate that legal requirement. What was made by man can be
undone by man.

>>>I want to see something in
>>>it's place, or else itis pretty hard to argue that it hasn't been made
>>>much much easier to get a license.
>>

>
>I support strengthening the tests. In general, I want more questions on
>theory, and more procedural questions. I wouldn't mind if there were a
>ham etiquette section added to the test.

"Etiquette?" :-)

The questions and answers are all generated by the VEC QPC, not
the FCC. All the FCC does is specify the total number of
questions and approve the VEC QPC set. Talk to the VEC QPC.

The FCC states, and has stated for some time, that the MINIMUM
number of questions in any written test element is 10. They do not

state a maximum. Each VEC QPC written test pool could have 20
or 30, or even 100 more questions-answers. It's all up to the VEC
QPC. So far they haven't made more than 10 times the number of
questions required.

>I want the new ham to come on board with some idea of what is expected
>of him or her in the way of how to conduct themselves on the air. I want
>them to have at least a rudimentary knowledge of electronics, and know
>some basics on antenna theory, like our "quarter wave dipole" discussion
>on rrap of a few months back proves is needed.

God forbid any dipole which is NOT exactly a half wave in total
length! :-) :-) :-) It can't possible work, can it? :-) :-)

You want a "basic training" or "boot camp" for amateur radio SERVICE
members? Good. They can all march in ranks to the same drum
beat. No dissension, no discord, all one big happy family. Once
out of Basic or Boot you can decide on Rank, uniforms, insignia, etc.

Don't like the "education" of modern amateur radiomen? Talk to the
Chief Educator who lives in Newington at 225 Main.

>>>You may want it made much easier to get a license, but I don't. Not a
>>>filter, not a way of keeping people out. just a way of ensuring that the
>>>amateur has some level of acumen.
>>
>> Ending morse doesn't change the level of written tests.
>
>No kidding! I want the level of the tests changed though. And not to the
>level of the "average sixth grader" either.

There's NO age discrimination in U.S. amateur radio.

Amateurs have been licensed as young as 6 years old. That's a
FIRST GRADE age.

Perfectly legal.

>>>Otherwise, those who want little or no testing are just encouraged.
>>
>> Encouraged about what?
>
> About little or no testing.

Everyone KNOWS all the questions, right? Just a matter of
memorizing them. Piece of cake. If a FIRST GRADER can do it,
anyone can, right?

>> doctrine.
>
> I'm not talking about NCI, I'm talking about NCI members. There is a

>difference. As far as I know, NCI has no official opinions beyond ending
>the Morse code test.

No, no, no, no! You haven't gotten the WORD from the other
newsgroupies in here!

NCI is a direct competitor to ARRL. NCI threatens the existance of
ARRL. NCI threatens the security, safety, simplicity, stability, and
serenity of the amateur radio community! The newsgroupies demand
the abolishment of NCI.

Such has been the Word in here. Gods have spoken!

Amen.

>National Association of Amateur Radio feature half century old technology as
>feature article(s) in their membership journal speaks volumns.
>
>ï¿½ 97.1(b) Continuation and extension of the amateur's proven ability to
>contribute to the ADVANCEMENT of the radio art.

The thing being ADVANCED is the peace and tranquility state of
the amateur, Hans. That's important to their mental well-being.

Going back to past technology, rebuilding and restoring, is SAFE.
Such is a known quantity. It can be explained via many existing
texts. SECURITY. No problems about learning anything new. All
can become "expert" on things made long ago without undue
struggle. Such is already-proven technology...no struggling with
unproven ideas.

There's also the Nostalgia of the Never. Most restorers were not
alive or too young when old equipment was high-tech. They want
to relive a pioneering past they never lived in, indulging in fantasy
and make-believe through vicarious mental other-lives.

Old radio is SIMPLE. Everything is analogue. No need to learn
new things like digital frequency meters (why get direct numbers
when it is so much "fun" to beat a 221 and interpolate from that
little book?), or PLLs for VFO stability (let it warm up for a half
hour first then squint at a hand-scratched dial reading and hope
you are still in-band), or "product detectors" when everyone knows
a detector is a diode and must always have a BFO.

STABILITY. Not just in quartz crystal control of a single transmit
frequency. Known quantities are stable...all that is required is to
consult existing texts and pictures long in existance and praised
by mostly-gone users. If it was good then it MUST still be good.

SERENITY. Self-satisfaction of "accomplishing" what has already
been done.

Safe. Secure. Simple. Stable. Serene. Old ways are best...

Another way is to have everyone believe in the same thing...as is
published every month in a certain membership magazine.

As a single "authoritative voice," a New England membership
group DEFINES everything in amateurism for all amateurs. No
bickering, no dissension, no arguing. All do as They say.
No problems. Everyone happy in Nirvana.

All who oppose the above shall be villified, burned at the stake,
and denounced as not Believing in the True Way.

Halleluya. Amen.

>

Dwight, I've got a couple of questions for you, but let me first say: a) I
am already driving above the posted speed (by at least 10 and often 15 mph).
So, I am not going at posted or under posted speed; b) I am driving "as
courteously" or more than anyone else...certainly safer--I am leaving plenty
of distance between myself and the traffic ahead, if there is any and, keep
in mind, the traffic ahead is generally going the same speed I am--it is the
oddballs that come up from behind and want everyone to start moving over for
them.

OK, question 1:

Why should it be *me* who has to yield to someone else to be courteous to
them, when it is *them* acting unsafe, speeding faster than anyone else, and
often copping quite a conscious attitude of beign an idiot--the rest of us
are just driving along.

>

OK. So I don't have that mandate. Neither does the person behind me.
Since I am "in line" first, they should recalculate when they get on the
road if my being there (and others) is going to be such an aggravation for
them.

I don't consider myself a self-styled vigilante. I consider myself as a
driver like anyone else on the road...except I don't act like an idiot
around others (if I speed--and I do--I make darned sure that I keep a safe
distance from others). The jerk (yeah, jerk) behind me obviously thinks
they are more important than anyone else--I ignore them.

Someone said something about the "flow" of traffic. Generally, my speeding matches the majority of other speeders on the road. If they are going faster than I feel safe to do, I move over to the right. Point being: the "rest" of us are in the flow of traffic. It is those who wish to speed faster that are being the disruptive ones. They can work their way around everyone--who stays there *to* get around the infrequent (at that time of morning) drivers who are probably still speeding, but in the right hand lane.

I am probably lately more apt to be ignorant of my own safety in a steady determination to "dammit, stop allowing others to treat me like that" attitude. I've been in one of those attitudes for a while now. I'm kind of liking it.

>That's what "leadership" is *supposed* to be there for ... to make
>the tough calls when the answer isn't necessarily obvious (or may
>be right, but not overwhelmingly popular).

But ultimately it comes down to popularity, because if the "leader" makes
unpopular-enough decision(s), he/she may not be a "leader" anymore. This
happens in government, in business (if a decision isn't popular-enough with
customers and/or stockholders), and in almost all voluntary organizations.
>
>> For example, look at
>> that "21st century" paper (CQ published it, btw, and it was in their

>> the "Communicator" idea "the right thing"?
>
>No ... we need more people who understand radio, not more appliance
>operators.

Agreed!

But the leaders of the NCVEC committee disagree with us.

And some of the provisions of the "Communicator" work against that. (No rigs
over 30 volts??)

But others will argue that an easier entry-level license will attract more new
hams, and therefore more who will want to *understand radio*. After all, isn't
education one of the B&Ps of the ARS?

It boils down to the old argument of:

"Become a ham to learn about radio"

vs.

"Learn about radio to become a ham"

>> > Otherwise, they could just do a web vote
>> > popularity contest on every issue and wouldn't need Directors ... the

>
>I wasn't advocating a popularity contest ... just saying that if nobody in
>"leadership" has the cajones and good judgement to make the right call,
>then it might as well devolve to that ...

They *do* have the intestinal fortitude to make the "right" call. But there's disagreement about what that call is. There are honest people on all sides of most disagreements.
>
>> It sounds to me like you're saying the ARRL Directors should sometimes

>insight, and experience and should be there to guide, not simply be a bunch
>of political "yes men" to a majority who may/may not necessarily make the
>best
>choices in terms of what's in the best interests of ham radio long term.

Others describe the ARRL leadership as "self appointed gods of radio" who claim to "know what is best". And they use that description as a reason not to join.

Like it or not, it's ultimately a popularity contest. And the long term is hard to gauge because things aren't left alone long enough. Even when they are, there is often little agreement with what the results mean.

For example, did US amateur radio grow faster in the nocodetest 90s than in the allcodetest 80s?
>
>> > What I was referring to were things like CW practice, bulletins, etc.

Don't need a consensus. Just somebody or somebodys with an agenda. Like NCVEC's Gang of Four.

>I suspect the vast
>majority would agree those tests are needed and are just fine as they are.

Sure - just like the vast majority might say that a single 5 wpm code test is needed and is just fine it is.

>Instead, I hope we can finally focus on more fully using the frequencies we
>have.

How?

What changes do you suggest to make that happen?

And what does "more fully" mean in that context?

>Of course, I don't see any growing consensus for that either, but one
>can hope.

Don't need a consensus...

No. But every issue seems to have the same theme: vintage radio.

> Afterall there are some hams to whom this is of interest either practical or
> just as a window into history. Although my own interest is in new radios

Tiny radios? May I suggest the "Tuna Tin," the "Tuna Tin Two," the
all solid state "Altoids Tin?" More recently we've had the film can
antenna tuner and the batteryless "Tic-Tac" diode receiver.

the vintage issue is a
> nice relaxing look at the past.

Especially when one is already breaking the law themselves by speeding
as TWIT admits to doing.

>>
>> Is FCC mistaken?
>
>Another argument for the no test agenda:

You didn't answer the question!

A god of radio posed you a question. You MUST answer.

It's a newsgroup LAW!

>We regularly hurtle at each other at combined speeds of 150 miles per
>hour and more, wearing nothing but street clothes, and strapped into
>devices carrying a large load of almomst explosivly flammable liquid.
>
>And we're afraid to let people run radios that are putting out the same
>power as the microwave oven over my stove?

Absolutely. In order to transmit on HF, ALL must know
morse code first. It's the LAW!

No one is safe without the morse code skill.

Know morse and everyone is safe.

> Most of the tinkerers I know are pro-code test amateurs. Mine isn't a
>scientific survey, but I've noticed a common thread among them. They are
>very interested in RF technology. They are intensely interested in
>Amateur radio. They really like getting their hands down into the
>equipment. And whether this is related or not, they are also very
>interested in Morse code. I've seen some cutting edge stuff made by
>these same people.

Those who do NOT test/know morse code cannot possibly be
"interested" in radio.

The rest of the radio world does not exist without that morse code
skill demonstrated by federal test.

The rest of the radio world does not count, has no bearing on
amateur radio.

All significant advances in radio have been done by amateurs.
That's how we all got cellular telephones carryable in shirt
pockets (complete with vision capability), cordless telephones
operating at 5 GHz, FM stereo broadcasting, and life-saving
capability during all emergencies when all the infrastructure
collapses immediately. Morse code skill did it every time!

> I do not know one technician that has done as much as build his or her
>own antenna. Well wait, I built a 1/4 wave ground plane for 2 meters
>when I was a Tech. But that's it.

There you have it. Those without federal testing in morse code
are all incompetent, ignorant, and worthless.

> Based on that admittidly small sample, I would have to say that we are
>putting out less tinkers per unit time, and almost certainly less per
>hamcapita. (Hans, that means tinkerers per total numbe of Hams. 8^))

"Numbe?"

"Tinkers?"

You build radios out of tin?

You need plans for the Tuna Tin 2? Or its companion receiver,
the Herring Aid?

No one can possibly be interested in radio without being morse code
tested. The gods of radio have spoken! It's divine LAW!

Amen.

Yes, in Texas it is the law. You are supposed to drive in the right lane
and use the left lane for passing, even if you are doing the speed limit
or over, you are obliged to pull to the right lane to let another pass.
The following is an exerpt from an article in the Ft. Worth Star
Telegram, April 12, 2003.
****
Texans must drive in the right-hand lane.

In other words -- move over.

Yes, you. Get out of the left lane.

I don't care how fast you're driving. Or what the speed limit is.

Texas law is blunt.

Except to pass, motorists "shall drive in the right-hand lane."

Both chronic slowpokes and self-appointed speed-limit vigilantes were
stung by transportation writer Gordon Dickson's report. He told how
habitual left-lane drivers are "despised" and how some traffic engineers
believe they cause wrecks.

I am not going to defend the lunatics who zoom up from behind at rush
hour, bearing down two inches behind your rear bumper and so close that
you can smell the extra-grande Starbucks coffee on their breath.

But the law is the law. Yes, it says drivers can't speed or tailgate.
But it also says to stay out of the left lane.

Some violators are obviously in denial.

>join.

Gasp...you mean to imply they DON'T know what is best?!?!?

>Like it or not, it's ultimately a popularity contest. And the long term is
>hard
>to gauge because things aren't left alone long enough. Even when they are,
>there is often little agreement with what the results mean.

You need NO consensus. You KNOW.

>If the bulletins and code practice were done online instead of on-air, what
>would be left of W1AW?

It's a MEMORIAL station. Remember?

>>> The whole point of W1AW is to do those things by *radio*. If we're
>>> going to use the website for bulletins and code practice, why not rag
>>> chewing, traffic handling, DX chasing, contesting......
>>
>>I've always said that the ampr.org domain should be come a much more
>>integrated, vibrant part of the internet as a whole ...
>
>But what have you *done* to make that a reality except for talking about it?

Just for starters, Carl was IN Geneva helping to get all of S25
redone. It got redone. Reality. Love it or leave it.

Some day I might hear W1AW out here 3000 or so miles away.
It doesn't reach Hawaii very well, or Alaska. Obviously us in the
west don't exist as states of the Union.

Nobody can possibly be "interested in radio" without testing for
morse code and then Acceptance of the True Way via ARRL.

What it should be and too many fail to realize is that the proper sequence is "Learn radio basics to become a ham and then as a ham continue to learn and increase one's expertise." It should not be one versus the other.

Just to illustrate the idiocy of some of the people on the freeway, I'll throw in a personal anecdote. I was driving down a multilane freeway through a construction zone and I was in the rightmost lane. I was going with the flow of the traffic in the slow lane, which was slightly above the limit posted for the construction zone. A semi truck comes up behind me, rides my bumper, honks, flashes his lights. Now, I'm already in the slow lane with no way to speed up since the vehicles ahead of me aren't going any faster and wouldn't want to anyway as there is too much chance to hurt a construction worker plus fines in construction zones are very steep here. This idiot keeps it up until we are out of the construction zone and it is possible to move further to the right.

Not enough features to be interesting. I want a lot more "bells &
whistles". Although now somewhat dated as other radios pack in more
features, I bought one of the earliest TS-50 radios. At the time, it was
the smallest radio around covering all the HF bands with typical user
features. However the TS-50 would be representative of what I consider to
be interesting in terms of compact size.

It's sad to have to point out the obvious, but a "membrship number" is not the same as the number of members.

> So, give us an EXACT number of ARRL members.

Check their annual postal statement. It's a violation for them to purjure that, and it delineates the number of "paid subscriptions" (ie: paid-up members)

How does the Texas law address the use of highways with say 4 or more lanes? If everyone is supposed to stay in the right lane except to pass, the highway then fails in its design purpose, i.e. to reduce congestion. The law would seem to indicate that no more than two lanes in each direction are ever needed.

Sometimes I listen to the ARUFON (UFO) Net on 3977.7, as I did tonight. But lo and behold, guess who's planted his fat ass on 3973.0? K1MAN ! The UFO net had already started and K1MAN just opens up 4 khz away without any regard to ongoing QSOs.

Where the hell is the FCC? Why is K1MAN still on the air?

Nations are like leaves; they change color before they fall.

Do the math --- that's 4.7 khz, not 4 khz.

I have no love for the antics of K1MAN, but 4.7 khz is enough room to put 2
QSO's with modern 2.1 or 2.4 khz filters. If you can't separate two
stations almost 5 khz apart, then you need remedial tuning training.

Oh man, I'm sorry. I really messed up my original posting. K1MAN opened up on
3977.3 khz, only 400 cycles away from the ARUFON net on 3977.7 khz.

NOW do you see my point?

Nations are like leaves; they change color before they fall.

>any consensus being evident.

I wasn't there (Dayton?) when Bill Cross said "the C word" but my
understanding was that unless the ham community came with a consensus,
it (we) were liable to get things that we may not like from the FCC
if we back them into a corner.

Perhaps - I hope - that was Bill's personal opinion and not "the
official policy" of the FCC (we've differed on things before).

With the latest Bureau restructuring, he now reports through another
layer of supervision, and I understand that his immediate supervisor
is now someone who is a ham, which was not the case before.

Yeah - to quote one of my favorite lines from the defunct "Amos and
Andy" TV show "speak to the man in Algebra, Andy"

Perhaps you can rephrase the question in the stone-furlong-fortnight
system of measurement. Perhaps it needs a Yaenkel coordinate transform
from reality to surreality.

> lanes so that someone who wants to
> go even faster can get by?

You're not that ignorant of the traffic laws around the country, Jim. In most states, slower vehicles must drive in the right lane (or right lanes on multiple lane roads), drivers should not impede the flow of traffic, and drivers must allow others to pass. Of course she doesn't have to slow down to do so. Instead, she would be expected to move to the right as soon as there is an opening for her to do so (instead of camping out in the left lane because she is driving fast enough).

> Where is it in the motor vehicle code
> that a driver on a multilane divided
> highway has to change lanes and slow
> down to allow a speeder to pass in a
> non-emergency situation?

Don't be silly, Jim. I don't live in your state. I've already said that is the law in "most" states, which obviously isn't a statement about all states. If you have any question about the laws in your specific state, look it up yourself. After all, it's your motor vehicle code, not mine.

> It's everyone's business.

It's everyone's business to enforce the traffic laws by taking direct action on the highways? I suppose you're also going to say she should chase speeders down the highway and ram their vehicles if they refuse to stop. The last thing we need is self-styled vigilantes on our nation's highways.

Thanks for looking that up, JJ. I suspected it was the law in Texas. I suspect it is also the law in Jim's state. Most states have, or are passing, laws in this regard because of studies which show that drivers who refuse to move to the right to allow others to pass cause accidents. I haven't seen these studies myself, but I've heard mention of them in debates about these laws.

It's on the driver's test in most states - you drive with the "flow of traffic" in any specific lane (neither too fast or too slow for that lane, with the far left lane always reserved for passing). You'll see "flow of traffic" repeated in many driver's test questions (how to merge with traffic when entering a highway and so on).

It's not just you - it's everybody driving in the left lane. If someone wants to pass, everyone has to let them do so. If they're speeding, the cops will eventually get them (that's what they're there for). If each driver is allowed to set the speed others can drive, what will stop it from reaching an extreme (I'm sure there is someone who doesn't think people should drive faster then 45 mph)?

Slower traffic stays to the right no matter how many lanes, if you are
in the left most lane of a four lane expressway you should move right to
give way to faster traffic.

>Len, like any Americans who've shown an interest in the ARS, have a
>disincentive. It is the Morse requirement for HF access.

Lennie's "disincentive" had/has NOTHING to do with Morse Code, Brain...It has to do with having absolutely NO understanding of what Amateur Radio is all about, what it's purpose and capabilities are, and what it means to be a "part" of something.

He's ALL about being an antagonist.

The "disincentive" was not an "ARS" or "ARRL" issue...it was a matter of the United States complying with treaties it was signatory to.

Lennie is a loser. He will never be more than a sideline observer to Amateur Radio, and he was hardly more than that in his "professional" career. This I have from people who knew him personally. His "contributions" to certain Naval projects were more significant when he stayed out of other people's way and let the REAL engineers do their job unimpeded.

Lennie alledges a "professional" career spanning four decades...Well, An Amateur Radio license granting access to over 97% of all allocations WITHOUT Morse Code was available for a fourth of that. So where was Lennie?

Lennie makes issue about how Amateurs allegedly don't "move on" in technology. Current technology places almost all advances far above the HF spectrum. The Technician Class license has granted those privileges since 1991. So where was Lennie?

One can only surmise that this "argument" about Morse for HF access is simply yet another LennieRant for "I don't wanna do it", and nothing else. If he were a TRUE leader in electrical engineering and technology, he'd be out in front showing "us" how it's done...But WHERE is he...?!?!

On the sidelines...No plan...No experience...No interest in contibuting to the program.

Just an observer...never a player.

I've read one. It notes that vehicles tend to get clogged up for that reason, and that you end up with odd clots of vehicles all bunched together, with a few people that want to get ahead of the clot. Dangerous? You betchya! Their recommendation was that laws about letting people pass, pullover when followed by too many cars, and enforcement that takes into account traffic flow rather than absolute speed was important.

Personally, I've found that the cure is to travel between those nasty clots of traffic. I don't have to worry about all the brake checks and close-in driving at 75 mph. I get there about 10 seconds after all the

smart people driving inside the clot!

Well, I don't believe what JJ (or my husband, incidentally) is saying is correct. I just went to the State of TX DPS website looking to see if I could find the traffic laws, but it looks more involved (read: ridiculously arranged) than I had thought it would be... I'll find it.

www.baetzler.de/humor/texas_driving_rules.html in the meantime!

I'd go along with that. However, I have always (maybe incorrectly, but...)
interpreted that "rule" to mean traffic that is going *slower than the
posted speed.* Wrong? Right? If the rule is designed to facilitate a
smooth flow of traffic *and* driver safety, why would it be contrary to the
safety aspect by making drivers constantly adjust to how much or little
someone is following the posted speed? The *flow of traffic* is probably
meant to imply flow of traffic at posted speeds.

I'd *almost* be willing to bet that I am more in line with the law--and even
the spirit of the law--than a person behind me acting like an idiot. I am
acting like an idiot, too, because you are correct in feeling that I could
just move over. But I liken it to the same thing as someone who is at an
intersection with others--in Texas it is common (though I would venture to

say illegal) that the first person at a stop sign goes first. This practice ignores all right-of-way laws I learned when I was learning to drive, but it is common practice. So, do I part from common practice and keep sitting at a stop sign, waiting for the person going straight to go through the intersection before I take my turn?

Then, maybe I should stop calling police when I see drunk and/or unsafe drivers on the road?

I don't accept JJ's submission at all. Perhaps if he'd reference more than
just the name of a newspaper, I could go and do some research myself. What

part of the "submission" from JJ is actually from the newspaper? The line that says, "Texans must drive in the right-hand lane" or the rest or any other part of it? I just tried on the Startlegram (an affectionate local colloquialism for the Ft Worth newspaper) to lookup any news article with "traffic" in it and didn't pull a thing related to what JJ has above. Not even anything remotely connected for that matter.

So, JJ, how 'bout something a little more concrete. By the way, the research did just net that beginning on Sep 1 of this year there is some new law in effect regarding police safety on highways during traffic stops.

Well, passed my element one with no problems yesterday and have been trying to get some contacts on hf with cw. I love cw but 5wpm just isn't cutting it so I am back to Numorse to bring up my speed. Anyone out there that tried a contact with me, sorry. I was forever putting out QRS and still not getting it all. I will be back though as I cannot use phone when the baby is sleeping. The light *tick-ticking* on the straight key doesn't disturb her as much as me talking.

Thanks

Which group and which magazine? ham radio and 73 magazines were New England based, but they're both defunct.

Your description of a membership organization that does not tolerate dissent sounds exactly like NoCode International. Right in their bylaws it says that any member who publicly disagrees with their stated position on code testing is subject to expulsion. They also require that all members agree to their prime directive goal as a condition of membership. No one who disagrees with their core policy can be a member of NoCode International.

I'm not saying that's right or wrong, just stating facts.
>
> All who oppose the above shall be villified, burned at the stake,

Now, Ells err, Len, why are you bashing NCI? All they'll do to someone who disagrees is rescind their membership. Since they state all that in their bylaws (which even I, a nonmember, have seen) what's your problem?

To my knowledge, such membership withdrawal has never been necessary. A very few members have asked to be removed from the membership list because they no longer agreed. Otherwise, the loyalty oath membership conditions have served NCI quite well, eliminating up front anyone who disagrees.

And now some puzzle pieces fit together. I can now reconcile Carl's
vision of how leaders are supposed to lead and his organization. Strong
leadership, independent from member opinion, and if you don't like it,
you're out.

Umm, no thanks.

Of course not, now that Ham Radio is nothing more than a CB Service lets dump it. Hell while were at it lets dump all testing.

I don't know about Texas law, but I spent part of the spring and early summer in Germany. Over there you ABSOLUTELY stay out of the left lane unless you in the act of overtaking and passing. If you dilly-dally around in that lane and hold up traffic overtaking you from the rear, you'll be cited and the fine is of some consequence (250 Euro's if I recall correctly.) Traffic in Germany is SO much better, because everyone moves crisply in and out of the 'passing lanes', rather than the buttheads here who take their sweet leisurely time about overtaking and passing, often just 1 or 2 MPH faster than the right hand traffic lane is moving.

Thats not possible. According to MAN he listened on that frequency for
months and quote "never heard a thing", of course he IS in Maine.

What you do is this;

Record it.

Sign a statement of complaint and mail it to Riley Hollingsworth.

His e-mail is RHOLLING@fcc.gov

Nope. It was near Detroit, MI.

We also have a problem that sometimes mandates driving regularly in the
leftmost lane in some areas. We have a lot of left side freeway exits.

Sometimes traffic is heavy enough that you'd better get into that left lane at least 5 miles before you get to the exit or you will never be able to get over to it.

The typical law in the states that I am familiar with is that at a 4 way stop says that the person arriving at the stop first goes through the intersection first. If two or more vehicles arrive simultaneously, the one furthest to the right in the circle goes first (i.e. the person who has no vehicle immediately to his/her right at the intersection). If four arrive simultaneously, well there's no rule for that and someone has to take the courteous route of gesturing the cross traffic across before taking their turn.

Keep at it. Also keep trying on air work as that will bring your speed up nicely. Check out the FISTS website and check out their code buddy program.

Next time you get the courage to fire up on the air, go to a frequency at the lower part of most bands ending in "58" like 3558, 7058, 14058, or 21058. Usually you can find people there looking for slower Morse.

Wow! Thanks so much for the support. I thought I would get some negative feedback but you guys are awesome. As far as setting up times, my daughter is usually in bed by about 9pm. I get nervous though. That is what blew it the first time I took the code. It's funny too, I find it difficult to send as well, but I read a lot about how people find sending easier than receiving. I actually have to write down what I want to send before I do it. Oh well, practice makes perfect!!!

We have one spot on a major freeway in Portland (US 26 eastbound)
where it goes into a three-way split very shortly after a tunnel in
which there is no lane changes permitted. There are big signs
"urging" motorists to get in the proper lane long before the tunnel
because both the left-hand split (I-405 North) and the right-hand
split (I-405 South) do not have convenient exits for recovering from
a bad choice. The straight-ahead split leaves you on the downtown
streets, which again does not have a convenient recovery option.

>
> Umm, no thanks.
>
> - Mike KB3EIA -

Mike ...

Don't confuse NCI's membership requirement of supporting the cause with
what I said about leadership.

In the case of NCI, which is a single-purpose organization, it seems to me
that supporting the cause of the organization is a legitimate membership
requirement.

In a more general purpose organization (like the ARRL, for example), I *do*
believe that the leadership needs to have the courage of their convictions
to
"do the right thing, even if it's not overwhelmingly popular - in fact, even
if it's
unpopular ..."

Sort of like the way the law treats folks like the DC snipers, if you will.

While the general public, if polled and left to its whim, might just take
those two our and string them up summarily, the law ("leadership")
must have the courage to say "No, they are entitled to a fair trial."

The point that I am making is that what is popular may not always
be the right thing to do, and leaders are supposed to exhibit the
courage and wisdom to do the right thing.

I hope this has clarified my point and eliminated any confusion between
NCI's membership requirements and my personal views on leadership
sometimes needing to do what's right, rather than what's popular at the
moment.

Another example would be Tony Blair ... the war in Iraq was not popular
at all in the UK, but Tony had the courage of his convictions to do the
right thing ... for the world and for the people of Iraq.

One has to register to view the The Ft. Worth Star Telegram's article archives, so I didn't look any further. However, will you accept a submission from the National Highway Traffic Safety Adminstration (DOT) website instead? If so, this link will take you to a description of Texas traffic laws. Scroll down words "Minimum Speed Limit" on the left and then read the information to the right of that (quoted below).

http://www.nhtsa.dot.gov/people/injury/enforce/stspdlaw98/txspeed.htm

Minimum Speed Limit:
I. No person shall drive so slowly
as to impede the normal and
reasonable movement of traffic.
Tran. Code ï¿½545.363(a)
II. A person, driving at less than the
normal speed of traffic, shall drive in
the right-hand lane then available for
traffic or as close as practicable to
the right-hand curb or edge of the
roadway. Tran. Code ï¿½545.051(b)

> (snip)

In general, you're right. Nobody is supposed to break the speed limit, so laws about slower vehicles moving to the right and not impeding the flow of traffic don't defend the speeder's actions. But, by the same token, slower drivers are supposed to move to the right and not impede the flow of traffic (if those are the laws in your state), so someone speeding doesn't defend the actions of the slower driver who is impeding the flow of traffic either. I know that sounds strange, but there is some logic behind it. On multiple lane highways, congestion (cars bunching too closely together) is one of the most common causes of accidents. And congestion is dangerious at all highway speeds, but even more so when drivers are speeding. To prevent that bunching up, many states have adopted laws to encourage slower drivers to move to the right so faster vehicles can proceed without bunching up behind the slower vehicle. The idea is to keep all vehicles flowing smoothly - yes, even if some are speeding.

Source record: 84294

this is the text from a web page i found recently...
http://www.mbay.net/~wb6nvh/Motadata.htm

if you follow the above link, it even shows radio pictures.....

MOTOROLA EARLY LAND MOBILE EQUIPMENT INDEX, 1938-1946

This page is an index to the earliest Motorola police radio equipment. It is not intended as an all-inclusive history of early land mobile radio or of the Motorola Corporation itself.

The Galvin Manufacturing Corporation began producing "Motorola" mobile police receivers in 1937, considerably later than some other manufacturers such as American Bosch, Link and Philco. Motorola eventually called their receiver the "Police Cruiser" model, all but the first of which were model prefixed "P69". Some prototypes are believed to exist from late 1936 which are not identified on this list. Also, special production equipment, which carried an "SP-" suffix, is not listed here. AM medium wave receivers were still being produced in the mid-1950's, even though the FCC began granting VHF 30-39 MHz licenses for 2-way AM systems in 1936 and granted permanent VHF FM licenses on both low and high VHF bands in late 1945. After World War Two, most manufacturers abandoned AM equipment other than as replacement parts for existing systems. No new Police Cruiser models were introduced after the War, although at least the P69-18 was available from existing stock through about 1949.

In 1942, Motorola began selling the "Deluxe" line of equipment, a large rounded-top two piece radio set often referred to as the "coffin units" or "doghouse sets." Although primarily an FM product, the Deluxe line apparently was offered in a VHF AM version with a type number AMR-13(V) for the receiver and presumably AMT-30(D) for the transmitter, but this author has never run across any or found production documentation supporting a "Deluxe" AM transmitter. Information is solicited ! In approximately 1948, the Galvin Company officially adopted the name "Motorola, Inc.."

In January 1951, as a replacement for the discontinued Police Cruiser series, a Unichannel AM medium wave receiver strip was made available in the new "Research Line" one-piece radio equipment. It was available as either a stand-alone receiver (mounted in a "41V" style case or a motorcycle side-carrier) or combined with an FM Unichannel transmitter strip in a 10 or 15" mobile case, for those systems still using medium wave AM for dispatching. No new model AM VHF transmitters were introduced after the pre-war T69-20A mentioned below, other than possibly a "Deluxe" Line AM transmitter.

During wartime, military orders caused cessation of production of civilian radios and several reductions in the production of police sets. Police orders were still taken, as municipalities had a wartime priority, however no new models were designed during this time. Many departments upgraded to "2 way" capability after December 1941, particularly the smaller cities, in order to better prepare for civil defense and "wartime emergency" operations. In 1946, the the War Assets Administration was in charge of disposal of surplus military equipment, and provided many large AM medium wave transmitters (such as the BC-610) to police agencies free of charge. These were used on medium wave frequencies to communicate with Police Cruiser type receivers, and their abundance probably slowed the trend to convert to new VHF and FM equipment by a number of years. The majority of police agencies in the United States had vacated the medium wave frequencies by the end of the 1940's, scrapping their medium wave equipment such as the Police Cruiser receivers. However, a few large regional and urban systems continued well into the 1950's with the same frequencies they had used prior to World War II. For example, the Los Angeles Police Department continued to use its 1700 and 2300 Kilocycle dispatching system into the early 1960's !

Galvin also produced a number of base station receivers and transmitters during the prewar period. That equipment consisted of 19 inch rack panel receivers, operating on the 30-40 Megacycle spectrum, AM, Type B19-19, or a (1942 and newer) "Deluxe" line AMR-13(B) AC powered VHF AM receiver, in its own case. There was a complete line of rack mounted medium wave transmitters:

BASE STATION TRANSMITTERS

T19-23A: 25 Watt "Intermediate Frequency"
T19-30L : 50 Watt "Intermediate Frequency"
T19-30H: 50 Watt UHF 30 MHz
T19-31L: 100 Watt "Intermediate Frequency"
T19-31H: 100 Watt "UHF" 30 MHz
T19-32L: 250 Watt "Intermediate Frequency"
T19-32H: 250 Watt "UHF"
T19-33L: 500 Watt "Intermediate Frequency"
T19-33H: 500 Watt "UHF"
Presumably there was a T19-23H "UHF" transmitter, but I have no sales literature on that model.

RECEIVERS:

Nearly all Galvin receivers prior to WWII were called "Police Cruisers". They should have a chrome nameplate on the front of the housing which says "Police Cruiser" in script, with a red paint background. The word Motorola does not appear on the exterior of the receiver itself, but is on the face of the control head in the form of a red painted tin nameplate. With the exception of the P69-18SP-2 and later SP models of the P69-18, all Police Cruiser receivers were originally intended to mount on the automobile firewall, behind and below the dashboard. Again with the exception of the P69-18 (which

uses a "DC" electrical volume control,) the volume control is located on the receiver itself and is turned via a two foot "speedometer" style jacketed mechanical cable which connects to a knob on the control head. "UHF" model P69-17A could be mounted in the car trunk, with a long speedometer type control cable running to the volume control knob under the car's dash.

All Police Cruisers were essentially modified versions of Motorola's late 1930's AM broadcast car radios (even the "UHF" models !) The basic frequency range of all Police Cruisers except the P69-17A is 1500-3000 Kilocycles. The P69-17A covered 30-40 Megacycles. The earlier Police Cruisers have a black wrinkle finish, while the last Police Cruisers have a blue/gray wrinkle finish. The antenna input was designed for either a conventional broadcast whip or a copper "screen" antenna inside the car's headliner ("tar" roof sedans), except for the P69-17A "UHF" receiver, which shared the transmitting "whip" antenna on the vehicle's rear quarter panel.

Police systems of the time broadcast on two ranges: state police, counties and highway patrol (and a few large metro areas) generally broadcast on the 1550-1750 Kilocycle band, while cities and small towns used the upper band of 2300-2490 Kilocycles. In most areas, all local agencies other than state police shared the same frequency. Frequencies were "coordinated" into geographical zones to minimize interference, but night-time skip conditions had become a severe problem by 1942. The Fire Radio Service was not created at the same time as the Police Radio Service and appeared some years later. At first, it was not thought necessary to have radios in fire engines ! Those fire departments which did install radios, did so by licensing them as mobile police radio stations, and shared the police dispatch system.

The Models:

All equipment was designed for 6 volt DC operation only. Polarity was not important. All were powered by standard 4-pin auto radio vibrators. All models of Police Cruiser receivers except the P69-14 and the very first Police Cruiser contain two vibrators; only one is in use at any given time. A switch which protrudes through the front panel selects either vibrator. Should one vibrator fail, the officer could reach down and select the other vibrator, allowing the vehicle to continue on patrol without the need to return to the station for radio repairs. The transmitters did not offer this feature, but the transmitter vibrators were not in use except during a transmission and were evidently considered more reliable. All P69 Police Cruisers except the P69-14 are single channel.

* "POLICE" and "POLICE CRUISER": The first police receivers made by Galvin, before the P69 model series. Essentially a broadcast auto radio with the oscillator and RF section cut down to receive 1.5-1.7 or 2.1-2.8 Mc/s police frequencies. Tunable, the control head was identical to a broadcast auto radio control head except for the

frequency range markings. The case was a rectangular black wrinkle tub, the same as used by the auto broadcast radios. The first police receiver appears to have been just called "Police," and was merely a modified broadcast set. It was almost immediately updated to the "Police Cruiser," which now featured the die cast chrome "Police Cruiser" nameplate on front. All of the tubes were double-ended ST style two-digit glass types. Discontinued by 1937. No squelch control on the "Police" set..

Thanks to Ray Grimes of Motorola, Inc. for the above photo

* P69-12: 6 tube "economy model". Crystal control, single channel. Dual selectable vibrators. Uses button cell bias batteries in the audio section. Exterior black wrinkle enamel. 1550-3000 kilocycle range. Appearance nearly identical to P-69-18. Production dates approximately 1939-42. (PHOTO TO FOLLOW SOON)

* P69-13: 8 tube "deluxe model". Crystal control. Exterior black wrinkle enamel. The most common Cruiser prewar model other than the P-69-12. Dual selectable vibrators. 1550-3000 kilocycle range. Appearance nearly identical to P-69-18. Production dates approximately 1939-42. (PHOTO TO FOLLOW SOON)

* P69-14: 8 tube "pushbutton" 4 channel model. Tunable, no crystal. Channels changed by electromechanical solenoid stepper system. Single vibrator. Case elongated and different than other Police Cruiser sets. Control head involved separate pushbutton channel selection box. This model believed very rare. Exterior is black wrinkle enamel. There were at least two different models of P69-14. The model below is the original version , P69-14. There was also at least a P69-14D, which featured a rectangular case. Production dates approximately 1939-42.

* P69-17 (P69-17A): 8 tube VHF AM model. Operated in the 30-40 Megacycle range, crystal control. Single channel. Exterior black wrinkle enamel. Case style in front is slightly different from others; holes for alignment points are present a large handle is mounted on the front panel (evidently it was thought this new "UHF" set would need more frequent service !) Used then-new 1853 (6AB7) VHF tube as RF amplifier. Intended as the companion to the T69-20A VHF AM transmitter in all "UHF" 2-way systems. The Motorola P-374-A control head physical appearance is unknown; it is similar to other Cruiser heads but has a squelch on/off switch and mechanical volume control knob. Many units were apparently supplied with the same control head as the medium wave "intermediate frequency" Police Cruisers, which did not feature a squelch switch. The P69-17 was typically trunk-mounted, in contrast to medium wave receivers, and shared the transmitting antenna via a T/R relay. Production dates approximately 1940-49.

* P69-18: 8 tube final version of Police Cruiser, probably 1942 or later introduction. Crystal control, single channel. Selectable dual vibrators. Exterior blue-gray wrinkle enamel. Volume control is a DC remotely controlled design. Control head is the P-8022 as used on

wartime and postwar FM sets. The squelch control is located on chassis of receiver, but several -SP modifications allow the P-8022 control head to also control squelch. -SP1 Modification allowed remote squelch control. -SP2 modification allows trunk mounting of P-69-18 and cabling interface to standard FMTR series cable set and FMTR-30D transmitter plus adding the -SP1 modification. Production dates approximately 1943-50. It is believed that most were produced in the 1945-49 era.

* No P-69-15 or P-69-16 sets are believed to have been manufactured.

RECEIVER CONTROL HEADS:

Shown below are the speedometer cable style "remote" control head for the Police Cruiser receivers which did not feature electrical volume control, and the "small" mobile speaker. There was also a "large" mobile speaker, featured in the photo of the transmitter installation shown later on this page.

MOBILE TRANSMITTERS:

The AM mobile transmitter was the T69-20A. This appears to have been Motorola's only AM mobile transmitter, and is a two piece set in which the power supply and modulator are in one case and the RF section in a second. As originally configured, the power supply was usually installed on the firewall of the automobile, next to the receiver and under the glove box, while the RF section was located in the trunk and attached to its antenna via a short braided copper rope. A fat cable delivered the high voltage and other lines back to the trunk, under the floor mat. However, placing both sections in the vehicle trunk was a popular option.

Exterior color of the units is blue-gray wrinkle enamel, with color shades varying substantially over the years of production, as the photos below show. It is believed the T69-20A first began to be sold in late 1939; production continued through at least 1949. The control head was available as a "handset" type, in which a push to talk Western Electric "E" series telephone handset hung alongside or on a cradle on top of the control box, which was a gray square box with Amphenol connectors on the bottom for the control cable connections. Later versions featured a Western Electric "F" series handset, as shown below. A microphone type control box was alternately available; this is believed to have been the same control box, but without the handset cradle. The control head only controlled the transmitter; the receiver retained its own control head . See typical T69-20A installation photo below:

"SPECIALS":

Various special production radios were produced. One such example is the curious pack-set transmitter-receiver appearing below, which is shown in a circa 1941 Motorola catalog. It is believed this unit was essentially a prototype which led to the postwar FPTR - and FHTR-

series pack sets. Probably few (if any ?) were actually sold.

"ONE PIECE SETS":

During wartime and to the end of Police Cruiser production, a kind of "one-piece" two-way radio set was manufactured, which consisted of both T69-20A transmitter cases and a P69-18 or -17 Police Cruiser receiver, all mounted on a large copper plated chassis, which was mounted in the trunk compartment of a police car or in a utility compartment on a fire engine. The later versions of these sets used the P-8022 control head for both receiver and transmitter functions. They were purchased by the US Government in some quantity. For example, they were used in the trunks of Signal Corps staff cars for the 1940 annual War Games at Camp McCoy, Sparta, Wisconsin (believed to be P69-17A/T69-20A combinations.) Advertisements in CQ Magazine in the late 1940's by surplus dealers offered them as having come from "military police service."

The P-8022 control head above was often used with the "one piece" installation shown above it, but not with the original T69-20A installations, which used separate control heads for transmitter and receiver. Also note that coiled microphone cords are a postwar development. The original microphone used with the above control head would have had a straight cord, and would have had a more flush-appearing, "push up to talk" button which identified the earliest Shure Mfg. Corp. mobile microphones used by Motorola. In addition, the rear "hangup button" was a wartime development; prewar mikes would have had a hang-up ring on the top. As an aside, the above control head, last produced in 1950, was used by the Los Angeles Police Department from 1949-58 !

NOTE REGARDING CAR-TO-CAR OPERATION: Readers may wonder how radio equipped cars communicated with each other directly using medium frequency receivers and VHF AM transmitters. Normally, they couldn't ! However, there was an interconnect function available at the base station, which allowed the audio from the base station receiver to be fed into the microphone line of the base station transmitter, and the base station would be left on the air continuously as long as this switch was closed. This function, often called the "hot button," allowed cars to communicate with each other in emergencies, such as coordinating chases and so forth. Of course, mobile units with microphones instead of handsets would need to reduce the receiver volume to prevent feedback, as such a system was "full duplex."

MIX AND MATCH: It was not uncommon to find Motorola receivers or transmitters matched up with competitive makes of equipment. For example, some agencies might have started out with Philco mobile police receivers, and then added Motorola T69-20A transmitters. Or, a Galvin Police Cruiser receiver installation might have had a Stancor or GE transmitter added later. Some of the earliest postwar 2-way California Highway Patrol installations started out with a Police Cruiser receiver, and added both Motorola and RCA 39 Megacycle VHF FM

transmitters later on, in the case of the RCA by modifying the RCA control head to operate the P69-18 Motorola receiver !

THE ANTENNAS:

In Police Cruiser receive only installations (1 way radio), the antenna used was a regular broadcast whip. Other options included the "screen" antenna and an extra length "super" broadcast whip. The "screen" antenna was only used in cars of the 1920's and early 1930's, which still had a roof made of a tarred fabric material rather than a full steel roof. A copper or bronze screen was inserted between the "tar" top and the wooden slats of the roof, and the lead-in brought down to the receiver through the hollow post on one side of the windshield. The "screen" antenna was far superior to all other types, but disappeared into history when cars began being manufactured with all metal roofs. There were other antenna designs, which were unsuccessful, such as a trombone shaped affair which mounted under the auto running board on the driver's side, on insulated spacers, or the front bumper being used as an antenna by completely rubber-insulating it from the rest of the auto chassis. Although outside the scope of this web page, motorcycles did make use of the screen antenna to some extent. Old photos show the screen, about the size of a ping-pong paddle, mounted horizontally on insulators above the rear fender.

In two-way installations, a separate antenna was used for the transmitter. Motorola's antenna was the strange three-legged affair as shown in the above photograph of a T69-20A in a police car, which featured an adjustable length whip. The one-piece set shown above included a transmit-receive antenna relay, in a small box, such that the only antenna necessary would be the transmitting antenna on the rear of the patrol car.

THE FM EQUIPMENT:

FM was first used in 1940 by the Connecticut State Police radio system, with equipment built and designed by Fred M. Link Radio Co. in connection with Professor Daniel Noble, consultant. Noble would shortly thereafter joing Galvin in direct competition with Link. It can be seen that it was no accident that the Motorola FM equipment bore a close resemblance to the Link designs !

Galvin brought out its own line of FM police equipment in approximately 1941. FM was not an immediate success, and initially few units were sold. The widespread success of VHF FM in armored units during the war proved its superiority in mobile operation, and the men who would return from war to work in and design mobile radio systems had learned its advantages. There was widespread conversion to FM and "UHF" at the end of the War, when the FCC made permanent allocations of 30-40 and 118 Megacycle range frequencies to police and emergency radio systems.

Motorola's FM equipment was called the "Deluxe" line, although they appear to have thought up that name sometime after the equipment was being marketed. The Deluxe line was a superb piece of equipment for its day, reliable and offering high performance. It outperformed the AM equipment to a significant degree in both range and clarity, and represented Motorola's primary product line after the War. Once production of the FM equipment was in progress, Motorola ceased promotion of AM equipment although it was still produced and available for purchase for another ten years. Shown below is the first Deluxe line equipment to be offered; the FMR-13(V) 30-40 Megacycle FM receiver is on the right, the FMT-30(D) 25 Watt 30-40 Megacycle FM transmitter on the left, and the P-8022 standard control head in front. The Deluxe line went through a number of improvements, which will be detailed in a separate web page covering Motorola postwar and 1950's equipment.

This page is maintained and updated by Geoff Fors, WB6NVH, in Monterey California USA. It is intended to convey historical information rather than be a masterpiece of web design ! It is a private effort not sponsored by Motorola.

If you have or are looking for old police radio information, printed materials, equipment, parts, photos, etc. I would like to talk to you ! That's because we've all been there and done that. Early on I had a real old-timer answer me and he must have been going at least 35wpm, probably been doing code since radio began. After several requests, he got down to what I could handle, about 10wpm, and stayed with me for a few minutes and then gracefully said goodbye. I sensed that going so slow was a strain for him but he still was willing to spend a few minutes with me.

So your mentality is, "until I am caught, I will continue to break the
law." Do you speed throught school zones with that same attitude?

Depends on the time of day and what areas you want to work but I would
suggest 40m or 80m at night and 15m or 20m for day.

I really enjoyed driving in Germany also. At first, the autobahns were shocking. But, after I got used to it (a couple of years), I drove just as fast as everyone else. Later, after I gained more experience (and a vehicle that could safely do it), driving at 110 to 120 mph on the autobahn was fairly routine - faster if I was in a hurry to get somewhere. At those speeds, it is critical for all drivers to cooperate.

By the way Hans, I was working on QSL cards today and when I entered your call in my computerized log I found not only the two relatively recent contacts for which you sent me cards but a much older one too. It appears that we worked back in January of 1993 during the "Minnesota Beach Party." I had tested in May of 1992 and received the actual license at the end of July 1992. I'd only been licensed a little over 5 months then. My Extra class license arrived at the end of January 1993.

W5TWIT wants to play citizen traffic cop, it isn't for her to decide if
someone is going to fast and make them slow down by staying in the left
lane (even though she is exceeding the speed limit herself), she is
obliged to move over and let the faster traffic pass. It is up to the
authorities to take care of the speeder.

From the description, it is the person coming up behind that is trying to
disrupt the flow of traffic as Kim stated that she was going the same speed
as the traffic ahead of her. The person coming up behind would be then

trying to force a whole stream of cars one after another to move over for him/her.

I fail to see what is so hard to understand about the law...slower
traffic stays to the right. It really is very simple.

Your inability to comprehend seems to increase whenever your argument grows weak, Dave. You stated that one must have experience to make an informed decision - not knowledge, experience. I pointed to child birth, as one example, to prove that wasn't true. But, since you can't seem to understand that, I'll spell it out for you. One does not have to have a child ("child birth") to make an informed decision about abortion laws ("government policy"). And, before you object to that, the act of abortion is a medical procedure, but the laws governing abortion are government policy.

> That isn't what your words say. Look at 'em

> morse *use*. If you can't find them, perhaps
> I can provide a quote.

You were talking about an entirely different "use" than I was. You were talking about Amateur radio operators "using" code while I was talking about the "use" of Morse code by other radio services as that relates to code testing. Apples and oranges, Dave. This discussion isn't about the "use" of code by Amateur radio operators - ending code testing will not stop you from using Morse code.

> I strongly disagree that a five word per minute
> morse test indicates emphasis. (snip)

Again, it is "emphasis" compared to the other operating modes, and compared to where this country needs expertise (see FCC statements in previous messages).

> (snip) Additionally, nothing precludes anyone
> from developing expertise though "where this
> country needs expertise" hasn't been defined.
> (snip)

Morse code certainly isn't "where this country needs expertise" today.

Until 1977 the road signs in Texas read, "SLOWER TRAFFIC KEEP RIGHT",
those signs are being replaced with "LEFT LANE FOR PASSING ONLY". How
much clearer than that can it be? Even Kim should be able to grasp the
concept of that.
It is all spelled out in the Star Telegram article.

If there's no reason to go slower or stop - 15 mph. And no faster, even if I *feel* I can go faster safely.

In similar fashion, if I see a school bus put on the red lights and/or the little stop sign folds out, I don't try to go by in either direction. Even if I can plainly see that there are no children who could possibly be in danger from my car, and I may *feel* I can proceed safely, I don't go until the red lights are out. Because that's the law and it's the safe way.

Cool. I'll check that website out. However, the two above put me legal
driving in the left lane--since I am traveling at the speed that the
majority of drivers are driving in the left hand lane, which makes *that*
the flow of traffic--with the people desiring to blast passed all of us in
the wrong; they are going against the flow (at least in my opinion).

JJ, there is a line in that *commentary* in the newspaper article you referred to: something about the signs that say Left Lane for Passing Only. Well, I'll look on my way in to the office in the morning but, as far as I can remember, there is not one sign in the 32 mile stretch of highway that I travel that says anything about "Left Lane for Passing Only."

Hmmm... I'm going to build a 15m CW direct conversion transciever... maybe
I'll build it and make sure it's upgradable to 30m (frequency doubler on
the VFO and a 2nd input filter).

Slower than who or what? Slower than the flow of traffic ahead, or the traffic behind? Slower than most of the drivers on the road, or slower than the fewer drivers on the road (who are speeding faster)? A sign that simply says "slower traffic keep right" is pretty darned ambiguous.

JJ, this is probably the last response you'll ever see from me...because
you're disrespectful, childish, and pretty darned assinine to boot. The
fastest someone could go through a 15 MPH school zone would be as fast as
the vehicle can go. The fastest *I* would go in a 15 MPH school zone is
about 12-13 MPH. Now, shrivel your dick up and go play with it somewhere
else...

Well, I knew you should have gotten you kids to read it to you, here is
another quote from the article.

****
Until 1997, the messages along Texas' divided highways were passive:

SLOWER TRAFFIC

KEEP RIGHT

Since 1997, those signs are being replaced with a more direct command:

LEFT LANE FOR

PASSING ONLY

The law is not new.

Only the signs are new.
****

Notice is says the signs *are being replaced*. It does not say all the
signs have been replaced so just because you don't see it on your little
32 mile stretch of road out of the 76,986 miles of highway in Texas,
dosen't mean there aren't any signs that say "LEFT LANE FOR PASSING
ONLY". I have seen them. There are over 1 million highway signs along
Texas roadways and a lot of them are the signs in question to be
replaced. I am sure they will get to your 32 miles someday.

I also call your attention to the last two lines, the law has always
been the left lane is for passing only, only the signs are being changed
to better express what some have a hard time understanding. So even if
you don't see the signs, the law still applies. I haven't seen a Texas
driver's written test in a long time but I would not be suprised that a
question about this very subject is there and is something you should
know even without a sign to remind you. Maybe on your 32 mile stetch of

road they will need a sign every mile or two to keep you reminded.

You remind me of the blond gal that collasped on the sidewalk. Several came to her aid and someone noticed she was wearing earphones attatched to a small cd player. In the process of attempting to help her the earphones were removed and she suddenly expired. Someone picked up the earphones to see what she was listening to and heard, "breath in...breath out...breath in...breath out."

If traffic in the lane you are in is travling faster than you and you
have a lane to the right, you are obliged to move to the right. It isn't
that hard to understand. However for those like you who seem to have a
difficult time with that concept is why they are changing the signs to
read, "LEFT LANE FOR PASSING ONLY."

I ask a valid question and here you fly off the handle and start with
the vulgar suggestions.

Now to answer the question I ask of you and another poster. I don't know
about other states, but in Texas you can go only as fast as any other
vehicle in the zone at or below the posted limit. If another vehicle in

the zone is going 10 mph, then you may go no faster than that vehicle. In other words, no passing in a school zone. If you are the only vehicle in the zone, then what ever the limit is is valid unless unusual conditions dictate otherwise.

How is that "unpopular"?
>
>While the general public, if polled and left to its whim, might just take
>those two our and string them up summarily,

I don't think so! You have a curiously low opinion of your fellow citizens.

I think a majority of "the general public" realizes that the rule of law and
the rights of the individual to a fair trial apply to everyone. If nothing
else, most people in "the general public" realize that if those two can be
sentenced without trial, then at some point in the future, members of "the
general public" could face the same fate.

>the law ("leadership")
>must have the courage to say "No, they are entitled to a fair trial."

And "the law" is the result of checks and balances between the legislative, the judicial and the exectutive branches of government.
>
>The point that I am making is that what is popular may not always
>be the right thing to do, and leaders are supposed to exhibit the
>courage and wisdom to do the right thing.

And to convince the majority that it is the right thing.

History is full of leaders who committed unspeakable atrocities and were unrepentant because they thought they were doing "the right thing".
>
>I hope this has clarified my point and eliminated any confusion between
>NCI's membership requirements and my personal views on leadership
>sometimes needing to do what's right, rather than what's popular at the
>moment.

What you are saying puts the leader's persoanl judgement above democracy.
>
>Another example would be Tony Blair ... the war in Iraq was not popular
>at all in the UK, but Tony had the courage of his convictions to do the
>right thing ... for the world and for the people of Iraq.

It is my understanding that the prime minister serves only as long as the Parliament backs him up. If he/she does something unpopular enough, he/she can be recalled/replaced at any moment. So ultimately even Mr. Blair has to retain popularity or be removed from office.

In any democratic organization, the people ultimately retain control. In a constitutional republic such as the USA, there are checks and balances to limit direct control and slow down radical changes, but ultimately the people governed are the ultimate power, not the judgement of the "leaders".

Agreed, human sent code is disconcerting at first if you have learned
using nothing but computer generated code.

Good work all in getting your 5 wpm.

If you have NuMorse Pro you can also try the "Real Morse Code" option
to give a simulation of on air code complete with QRN and QSB.

Whoopee....so what does that have to do with anything that has been being discussed about multiple lane highway traffic and, specifically, traveling in the left-lane at above posted speed limits?

What it took you several words to say is this: in Texas (at least) you may not pass another vehicle in an active school zone. So, genius, how 'bout ya explain where you were going with this? Oh forget it, I forgot you can't...never mind.

>Steve, I think it has to do with the disincentive of Morse Code
>testing. You might want to check with Len on this.

Why?

Morse Code is only required for access to less than 3% of all Amateur allocations, none of which is above 30MHz.

Lennie keeps asserting that the future of Amateur Radio is in the new technologies, none of which is occuring below 30Mhz.

Lennie ALSO keeps insisting Amateur Radio is "stuck" in the 1930's somewhere, yet evidence in every media indicates he's grossly mistaken. Also, the fact that the majority of Amateur Radio activity takes place above 30Mhz further exposes Lennie's rants for the silliness and antagonistic fodder they are.

Ask Lennie? I could, but that would just amke the heap of unanswered questions that much higher.

That's excellent but don't limit yourself to just the computer.

Listen around the bands too. Part of what you may be experience is not being skilled (yet) at both running the rig and copying code. The way to cure that is to use your rig to listen to real live code.

W1AW sends code practice on a regular schedule and should be very strong at your location on 80 and 40 meters in the evenings. Check

http://www.arrl.org

for the current schedule.

Also, don't limit yourself to 5 wpm or whatever speed you can copy. Spend some time at higher speeds. Even if you only get 1 letter out of every 3, it will sharpen your reflexes and when you listen to 5 wpm it will sound much slower. Try a range of speeds, up to the point where you only get maybe 10-20% of what's being sent.

> Anyone out there that tried a contact

Try this:

Disable the transmit part of your rig so that it doesn't put out a
signal, or use a code practice oscillator. Tune around for a CQ that
you can copy and have a "pretend" QSO, with you sending just to
yourself. Gets you used to doing the various things without actually
being on the air.

> I
> actually have to write down what I want to send before I do it. Oh well,
> practice makes perfect!!!

Absolutely!

Remember that CW operating involves a whole set of skills, but Element
1 only tests one of them. The rest are left "as an exercise for the
reader".

No gods needed. Simple observation will show that someone who proclaims
a decades-long interest in amateur radio and who has never bothered to
attempt even the easiest license exam has no incentive to obtain an
amateur radio license. See "intertia".

It won't bother me if you never obtain an amateur radio license, Len.
Just don't feign interest and then attempt to tell me how you think
amateur radio should be regulated.

You could say that you have an interest in amateur radio, Len. It isn't true, but you could say it.

You could say that you have an interest in gardening, but if your interest extends only to walking past someone's garden and advising that they're not properly caring for their climatus, you aren't a gardner.

You could say that you have a great interest in flying an airplane, but if your interest extends to buying a ticket to fly to Chicago, you aren't an aviator.

Reality points to the fact that you have nothing to do with amateur radio other than to make submissions to the FCC regarding an avocation in which you take no part.

Your claim might ring true if Len had bothered to obtain a code-free
ticket at some point. He hasn't.

> Sometimes traffic is heavy enough that you'd better get into that left lane
> at least 5 miles before you get to the exit or you will never be able to get
> over to it.
>
Same here in EPA. In fact we have both lefthand off-ramps and on-ramps
to major divided highways. Usually you need to get over as soon as the
first advance sign shows up (usually 2 miles out).

btw, there's a way to tell from the advance sign whether it's a left-
or right-hand offramp.....

For example, if you're going west out of Philly on the Schuylkill
Expressway (I-76) and you want to go south on the Blue Route (I-476),
it's a left-hand exit and you are warned 2 miles out.

You better hit the ramp at no more than about 35 because it's sharp
and of rapidly decreasing radius. And it comes up fast.

Someone in the left lane approaching that exit cannot move over
because they won't get back in time.

On top of that, many of the divided highways (like most of I-76 east
of Valley Forge) around here are only 4 lanes (2 each direction) and
if everyone stayed to the right there'd be no end of delays. And there
would be lots of accidents and delays at on-ramps.

So we tend to use all lanes. Slower folks *usually* stay to the right,
but not always, because there may be a reason for them to be on the
left.

One reason our roads are like this is the terrain.

You'll pardon our confusion. You've been acting as Len's representative for a few posts now in speaking of his motivations or lack thereof. I wasn't aware that you'd turned the controls over to him.

> the rights of the individual to a fair trial apply to everyone.

That's certainly the high-sounding politically correct
intellectualized response, but it's untrue.

The majority of the general public, in their heart-of-hearts, would
like to see a certain class of sub-human criminals summarily 'dealt
with'. In the case of sub-humans like Lee Malvo, John Mohammed,
Timothy McVeigh, and Robert Hanssen, the majority of the general
public would prefer that they be invited to an impromptu necktie party
and air dance, and that the festivities be broadly televised. The
majority of the general public, in their heart-of-hearts, would have
preferred that the GI's in YI1 land had lobbed a couple of grenades
into Saddams hidey-hole, rather than provide him with the opportunity
of a ''fair trial'. There is a certain level of crime, so calculated,
cold blooded, inhuman, and unredeemable that it does NOT deserve the
civilized right of "fair trial".

We all know that, but the majority of the general public have been
conditioned by liberals to feel guilty about such beliefs, and the
result is that sub-human trash feels safer in perpetrating their
heinous crimes knowing that the "fair trial" process might spare them
the fate they richly deserve.

Dwight, I'm with you on Kim's silliness about driving but this one just
keeps getting skewed more and more. Now you're writing about abortion
instead of child birth and NASA. You did not write anything in your
original comments to indicate that you were discussing "child birth
policy" or "NASA policy".

Can you talk? Can you do "hunt and peck" keyboarding? That takes care
of voice and keyboard modes. Tell me more about the areas where this
country needs expertise.

> > (snip) Additionally, nothing precludes anyone

I didn't write that it is. I pointed out that the 5 wpm test for HF
access doesn't preclude anyone from developing expertise in those murky
areas "where this country needs expertise".

Of whom are you speaking, old man?

I've had HF access several times in the last half century, all legal,
all involving actual communications. No amateur license was
required at any time. No morse skill needed whatsoever.

The discussion should be about the federal regulations for an amateur
radio license regulation, not the individual "motivations" of any
aspirant to an avocational radio activity.

You constantly insist on personalizing everything about those who do not share your holy and illustrious viewpoints. That is your problem and you continually foul this newsgroup with arrogant remarks against the person of those of opposite opinions. Not my problem but certainly yours in attitude.

Amateur radio is supposed to be a recreation, a fun activity involving radio, licensing required only because of physics of EM waves and federal regulation. Instead, you've turned it into a battleground of your own, arrogantly demanding adherence to your personal view-points. You join several others in here in so doing, some past, some present. That's counter to the original purpose of "the service," isn't it? Or is it?

Perhaps you embody modern amateur radio, a constant striving for leading the pack in competitive activity? A competition complete with taunts and jibes and outright insults against those who "challenge" your arrogant expertise? If so, there is no wonder that amateur radio has not increased in number commensurate with the growth in population.

Enjoy your little clique of morse code uber alles in amateur radio where the "bands" are only on HF. Feel superior that you've met all the criteria and standards established by long-gone amateurs of past times. You are important, superior, vital, and that is all that matters.

You should be demanding that ALL test for high rates of morse in order to become fully FDA licensed as a ham. Condemn all those who cannot learn, will not learn, nor share your opinions.

May Santa bring you an irrepairable intermittent in your favorite HF transceiver along with a truckload of dusty, high-sulphur-content coal in your stocking. Merry Christmas.

Brian Burke is not my "representative" nor am I his.

It is not my Life's Ambition to immortalize morse code as the
epitome of amateurism in an avocational radio activity.

Morse code skills are needed ONLY in amateur radio...according
to certain long-timers who have few other skills and ebody hatred
and bigotry against all on that one extremely important (to them)
skill in amateur radio.

If it is your purpose as a newsgroupie to spread malicious lies
about others, to challenge "motivations" of those not thinking as
your holiness does, then you are doing a fine job.

I am not "motivated" to love, honor, and cherish morse code as
the embodyment of expertise in radio of past times. Been in real
HF radio communications before most of these newsgroupies
were in existance...never used morse code, never had to...but
only as a professional, not as an amateur.

May the lump of coal in your stocking turn into a truckload of
dusty, high-sulphur-content carbon. Merry Christmas.

Jimmie isn't stating any "facts." He is simply manufacturing an
argument for the sake of something to argue about. SOP for Jimmie.
[he seems to need something, anything, to argue about every day]

No Code International is most of all a political special interest group.
It asks for no dues, does not demand a license of any kind in order
to belong.

Unlike the ARRL...which IS a dues-asking, amateur license required,
membership organization and political special interest group and a
publishing business, NCI does not pretend to represent "all" amateurs.

ARRL pretends to "represent all amateurs" yet they still haven't gotten close to a majority of all licensed U.S. amateurs to belong to them. They've not been able to do that for years past.

ARRL refuses to take a stand on code testing in the USA yet the International Amateur Radio Union long ago came out for eliminating the code test internationally. Once that happens, NCI has stated that it will dissolve, cease to exist as a special interest entity.

NCI is a very small group, has no law firm on retainer in DC, nor does it have another group on retainer to lobby the FCC. ARRL does. NCI directors get out and personally lobby for action on elimination of code testing, including all the way to Geneva and WRC-03...and not on a multi-million annual budget available to the ARRL.

ARRL is your shepherd, you shall not want...

Amen

Here she is again, in the same dress (but not such a hot angle), and
taken by ANOTHER 435er:

http://www.qsl.net/k6pxa/janet.htm

She knows CW, eh? My ass.

BTW, Richard Burton now frequents 151.820Mhz in SoCal, I talk to him
sometimes from San Diego using my beam on MURS... all on the up and
up.

> Of whom are you speaking, old man?

Your name is Len, isn't it, grizzled older man?

> I've had HF access several times in the last half century, all legal,
> all involving actual communications. No amateur license was
> required at any time. No morse skill needed whatsoever.

Your memory must be failing in your dotage. Amateur radio is the topic.
Your HF access of the past isn't an issue this time around.

> The discussion should be about the federal regulations for an amateur
> radio license regulation, not the individual "motivations" of any
> aspirant to an avocational radio activity.

Maybe you feel that's what it should be about....but it isn't.

> You constantly insist on personalizing everything about those who do
> not share your holy and illustrious viewpoints.

I neither do it constantly nor with all others. You personalize many
discussions here. How do you explain that away?

> That is your problem
> and you continually foul this newsgroup with arrogant remarks against
> the person of those of opposite opinions. Not my problem but
> certainly yours in attitude.

It doesn't seem to be a problem for me, Len. At the moment, judging
from your reply, it is one for you. Deal with it.

> Amateur radio is supposed to be a recreation, a fun activity involving
> radio, licensing required only because of physics of EM waves and
> federal regulation.

It is all of that and more, old gent.

> Instead, you've turned it into a battleground of
> your own, arrogantly demanding adherence to your personal view-
> points.

No, I've not turned amateur radio into any battlegrounds nor did I note
your presence on any of the ham bands this past week.

> You join several others in here in so doing, some past, some
> present. That's counter to the original purpose of "the service," isn't
> it? Or is it?

Are you confusing amateur radio with this newsgroup? Is it your opinion
that I'm required to quietly accept your guff?

> Perhaps you embody modern amateur radio, a constant striving for
> leading the pack in competitive activity? A competition complete
> with taunts and jibes and outright insults against those who
> "challenge" your arrogant expertise? If so, there is no wonder that
> amateur radio has not increased in number commensurate with
> the growth in population.

Well, old chap, it looks as if you're wrong in your assumptions yet
again. It is a cinch that you don't embody any of amateur radio--past,
present or future. That hasn't stopped you from doing the very things
of which you accuse others. You are--what is it you call
it?..."beligerant" toward radio amateurs who tire of your tales of life
at ADA a half century ago.

> Enjoy your little clique of morse code uber alles in amateur radio
> where the "bands" are only on HF. Feel superior that you've met all
> the criteria and standards established by long-gone amateurs of past
> times. You are important, superior, vital, and that is all that matters.

I enjoy morse code, SSB, FM, RTTY, Pactor and several other modes on MW,
HF, VHF and UHF. My "little clique" numbers hundreds of thousands in
this country alone. I haven't noted your presence.

> You should be demanding that ALL test for high rates of morse in

Morse or no morse, consider yourself condemned.

> May Santa bring you an irrepairable intermittent in your favorite HF
> transceiver along with a truckload of dusty, high-sulphur-content
> coal in your stocking. Merry Christmas.

Do you really know of any irrepairable intermittents? I have no need of
the coal. I heat with gas. Come to think of it, I'd gather from the
length of your pontifications that you do too.

You'll likely want to straighten the lad out then, Leonard. He has been
speaking for you of late.

> It is not my Life's Ambition to immortalize morse code as the
> epitome of amateurism in an avocational radio activity.

I'll mark that down as yet another of things we know are not your life's
ambition. It'll be listed right under "amateur radio license".

> Morse code skills are needed ONLY in amateur radio...

...then it is one of those things which shouldn't bother you in the
least.

> according
> to certain long-timers who have few other skills and ebody hatred
> and bigotry against all on that one extremely important (to them)
> skill in amateur radio.

I have lots of amateur radio skills, Len. Morse code proficiency is but
one of them. I use other modes and often QSO those amateurs who have no
HF access at all.

> If it is your purpose as a newsgroupie to spread malicious lies
> about others, to challenge "motivations" of those not thinking as
> your holiness does, then you are doing a fine job.

Please tell us what you view as an example of a malicious lie which has
been spread about you, Leonard. It can't be about your lack of
motivation toward obtaining an amateur radio license. You've declared a
decades-long interest. You bragged that you'd get an "Extra right out

of the box". A code-free exam has been available for a number of years.
Straighten us out.

> I am not "motivated" to love, honor, and cherish morse code as

I've pointed out the availability of a code-free license which provides
access to the VHF/UHF frequencies which you say are the new frontier.
Your motivation hasn't extended to obtaining one of those. You have no
incentive for overcoming your inertia.

It really is difficult for those able to copy above 30 wpm to slow down to
ten. Its not a macho thing, really.

Also now a days many folks use puters to send and readers to copy. Ive been
answered by someone going 20 when I called at 40 and they copied just fine,
and no ask for a QRS.

But, what I do is slow down if answered by someone slower than I was
sending. I feel that is courtesy and good operating practice.

Also be aware that this time of year the low bands are skipping out like crazy. If your too close together you may not hear each other at night.

40 is decent during the day, with 80 good at night, especially in the
winter months.

20 can be good, but you will run into dxers and such more often.

Well in a contest, I've answered those going faster than I can without expecting them to slow down as I've generally got the info by listening through their response several times before I throw in my call. However I'm relieved when they do slow down automatically as then I can verify what I have when they answer.

I personally do not use a code reader as that limits me to answering stations only when conditions are good, the signal is loud and the sending consists of nearly perfectly formed code. I've worked stations in contests that were so faint that I wasn't sure they got the exchange until they sent the "TU". Another time, I was one of the operators at a special event station and conditions were bad but several stations contacted us on CW and I'm quite sure that a code reader would have failed as the static was high and the signals distorted. One guy even sent us a thank you for working so hard to copy him. He really wanted to make the contact as he was a Civil War buff and we were commemorating the first Medal of Honor and it's winner. I happened to be the one to work him and it meant a lot that he enclosed the special thank you note.

Now when conditions are right for a code reader to work, yes, it beats me hands down. But when conditions are less than ideal, I find that I do a better job even though I don't work code enough to be really good at it.

For casual conversation instead of contesting, I'll need the other station to slow down. 15 wpm is my comfort level as more than that I have a tough time writing that fast (I'm working on head copy but that will take awhile yet).

So Dan, if you come across me on the bands, slow down to my speed as I don't and won't use a code reader. Maybe someday, I'll finally be good at it.

Dee D. Flint, N8UZE

Hey Greg, I know the stagefright thing. I passed my 5 wpm many years ago. Wasn t good enough to pass 13 to get My General in '76. Dropped out of ham pretty much until 2001. Got into SSB at first and late last year regained my interest in CW. I am still trying to break the barrier of 13 wpm but can t copy it on paper. Download the Koch Software Program by G4FON. It will play text on random characters from your computer. Read the free book on CW by N0HFF. Downloadable in pdf format. I am using the 200 most common words and playing them alternatively at 15 and 20 WPM. I use CW Morse to convert to wav files and record them on cd. At first 20 wpm was a total blur. Now I can pick up about half the words at 20 wpm.
Some of the experts say not to pick up a key until you can copy 13 wpm. That may be true.
My goal is to copy CW faster than I can send it. Listen to code faster than what you can currently copy. The best challenge is the OM who sends a couple of words per minute more than I am comfortable with. There is an order to the progression of a qso, so it's relatively easy to pick up name, qth, signal, rig, etc

Have fun learning 73's
Jerry

Sorry, but the point is W1AW, just like K1MAN, starts transmitting on top of existing QSOs.

Neither moves up or down frequency to avoid causing interference.

What does that have to do with the price of tea in China?

Can you say "Medical Waiver", or even "The fix is in"? With 435ers, I can believe ANYTHING... EXCEPT that leggy big-busted California blondes would bother to take the time to PRACTICE in order to pass a 13WPM Morris Code exam. Fat, out-of-shape slobs, yes -- hot blondes, no.

435ers are FAMOUS for breaking the rules... their HERO, Richard Burton, is the only ham to ever get thrown in the clink for FCC-related violations.

Sorry to ruin your fantasy.

Exactly right. As a non-member of ARRL, I think you have to let K1MAN do
everything they do, or stop them both, and I don't advocate the latter.

Whatever it takes to learn CW, it sure isn't brains, and whatever you
think of Kim's callsign, she shows more intelligence than you guys.

Much of K1MAN's transmission are not ham related. This is a violation of
the rules. It is not at all the same thing that W1AW does.

Dee D. Flint, N8UZE

Very cool! I am now listening more than ever. I will occassionally go onto an open freq and send CQ just to see if I can pick up a slow contact. But I send s l o w. Great advice though about progression- What would cw be to me if I just kept trying to find folks with 5wpm . . . I would always be at 5wpm! I really appreciate the kind words.

Thanks

Our confusion--Steve's and mine. Steve wrote (and you snipped):

"Lennie's "disincentive" had/has NOTHING to do with Morse Code,
Brain...It has to do with having absolutely NO understanding of what
Amateur Radio is all about, what it's purpose and capabilities are, and
what it means to be a 'part' of something."

heh heh...well, *that's* the picture I should have put on the QRZ site for Larry. He'd have moved to Texas in a heartbeat, looked me up, and fell over when he saw that I'd turned into a middle-aged used-to-be-drop-dead-gorgeous gramma! Yep, let's see, at 20 I weighed around 118 and at 5'6 that's pretty damned slim. Although, I pride myself on only being in size 20 slacks and pants right now...and I feel great! Back to my bowl of ice cream <GRIN>

Her postings on her driving habits and her views on taxation haven't demonstrated that. In addition, she's now showing some of that same lack of class in her responses which she showed in choosing her callsign.

If that interpretation were really true, the slowest vehicle in the left lane would set the flow of traffic (even if only ten mph) since all the others behind that vehicle are now going the same speed. Clearly, there is something wrong with that interpretation, isn't there? In reality, if there are two or three vehicles behind you who want to go faster, you're impeding the flow of traffic.

Perhaps Len's mistaken views can be excused. He isn't, after all, a
part of amateur radio. You, on the other hand, should know better.

> > > It is not my Life's Ambition to immortalize morse code as the

Okay, Brian, I'll do as you've requested.

THINGS WHICH ARE NOT LEONARD ANDERSON'S LIFE'S AMBITION

1. It is not my life's ambition to obtain an amateur radio license.

2. It is not my life's ambition to work Frenchmen out of band.

3. It is not my Life's Ambition to immortalize morse code as the
epitome of amateurism in an avocational radio activity.

Feel better now?

I broke no Tanzanian regs, operated where I was permitted to be and did
nothing to encourage French stations to leave their alloted band
segments. If you, after all this time, still have a problem, you need
to follow the advice I gave you ages ago: Contact the French PTT and
the REF.

Really? The Techs have been chased from VHF? When and how did this transpire? How would it keep Leonard from obtaining a code-free license?

No, I'm a mere amateur. I receive no payment for correcting Len's
spelling. Consider it a service to a professional.

> Get to work on Bruice/WA8ULX.

That'd be a hopeless exercise. Bruce misspells more words than he
spells correctly. Besides, he never claimed to be a PROFESSIONAL
writer.

I've explained that just about as much as I intend to. At this point,
you're simply using this to side-step the issues raised.

> A different "use"? Sorry, I'm not buying

Obviously. Like most of us, you have no intention of "buying" anything
that disagrees with your position.

> (snip) Tell me more about the areas where
> this country needs expertise.

Don't hold your breath, Dave. I have no desire whatsoever to get into a
long discussion about today's communications technology. If you truly want
to know more about that, a search of the internet may be worthwhile.

Not really, Dwight. You're now dancing around your earlier statements
in order to make them read like something different.

> > A different "use"? Sorry, I'm not buying
> > that.
>

You may find this difficult to believe, but not all of us rely on the
internet as our primary source for information. You've mentioned
several times about areas where our country needs expertise but you've
offered not even a single example. I questioned whether a 5 wpm morse
test precluded someone from developing such expertise.

What you are missing is that k1man is NOT like the W1AW bulletins at all. W1AW bulletins last 10 minutes. They are on ONCE a day, weekdays only. IF they interfere with existing QSO's it last only 10 minutes. Nothing anyone would get pissed about. However, k1man, likes to say he is just like W1AW... well he isn't. His "broadcasts" last 1 1/2 hours, several times a day!!!. So, he is NOT like the W1AW bulletins. He is just an amateur wannabee broadcaster and egotist that thinks he found a "loophole" in the FCC rules, and uses the W1AW bulletins as an excuse. Hey...given this precedent, why couldn't any ham have a 24/7 broadcast on ham radio! Just call it a "bulletin" The call in talk shows is an option.

It's time to limit bulletin broadcasts to what W1AW has been doing for their 90+ year history and keep bulletins to 10 minutes and once a day. This should please k1man, the belgrade bastard, and ensure that he IS JUST LIKE W1AW.

>
>You could say that you have an interest in amateur radio, Len. It isn't
>true, but you could say it.

I haven't. I don't.

The only way to have an interest in radio is to get a ham license.

To you it doesn't count at all that "interest in radio" can result in
a half century of professional work...including design in radio.

To you it doesn't count that "interest in radio" AND electronics
can lead to very enjoyable hobby activities in building, testing,
designing new electronics things ('electronics' includes radio).

No, FIRST one "must" get an AMATEUR license according to
Herr Robust.

>You could say that you have an interest in gardening, but if your
>interest extends only to walking past someone's garden and advising that
>they're not properly caring for their climatus, you aren't a gardner.

I've been into "gardening" for over 40 years. At this same address.

No amateur license required. No LICENSE required to garden.

Not a problem. I can discuss gardening with any neighbor and they
don't take offense. We share ideas, experiences, help each other
out.

In here, the arrogant officious ones DICTATE as to how all shall
behave according to their holy rules.

>You could say that you have a great interest in flying an airplane, but
>if your interest extends to buying a ticket to fly to Chicago, you

>aren't an aviator.

I don't have a great interest in flying an airplane now. Too expensive.

I was once a student pilot. Still no license required for that. Not even to operate a radio...already had the First Phone, so no 3rd Class Restricted permit necessary.

An amateur radio license isn't legal to use on civil airways frequencies, is it?

I am into flying R/C model aircraft on a casual basis...and have on and off for 40+ years. NO license required there to use the 72 MHz band channels. I've been into flying model aircraft for 60 years and even worked as a professional at Testors before they got into the plastic model side of that hobby. I was an International contestant in that some time ago.

>Reality points to the fact that you have nothing to do with amateur
>radio other than to make submissions to the FCC regarding an avocation
>in which you take no part.

Reality points to the fact that you CANNOT accept any opinions contrary to your own with grace or gentle manner...you constantly, beligerantly go after any person who can stand up to you and show where your ideas aren't valid.

The FCC accepts ALL input on ALL radio services, Herr Robust.
They don't need "licenses" in any radio service to accept comments.
I know that is a very foreign thought to your proud, arrogant holiness, but that IS true.

I'd like to see YOU address the FCC in the same manner as you address others. Good luck on that one now!

>Your memory must be failing in your dotage. Amateur radio is the topic.

It is?!?!?

I thought it was all about vehicle codes under the subject heading
of "Is Michael Jackson Innocent."

I thought it was all about national economy, presidential politics,
the antics of State, and general subjects that must be dear to
hamhearts everywhere that do NOT touch on amateur radio in
all those other threads.

>Your HF access of the past isn't an issue this time around.

Neither is the HF access I had from a Ventura marina a few
months ago...again (for at least the 5th time) without requiring
any amateur radio license or knowing morse code.

>> The discussion should be about the federal regulations for an amateur
>> radio license regulation, not the individual "motivations" of any
>> aspirant to an avocational radio activity.
>
>Maybe you feel that's what it should be about....but it isn't.

It seems to be about ANYTHING EXCEPT amateur radio. It seems
to be all about Kolonel Klunk wanting retribution for some imaginary
wrongs done to his psyche in here.

>> You constantly insist on personalizing everything about those who do

I did already. You got what you deserve. Be happy with that.

>> Amateur radio is supposed to be a recreation, a fun activity involving
>> radio, licensing required only because of physics of EM waves and
>> federal regulation.
>
>It is all of that and more, old gent.

Yes, to you. To you, amateur radio is a wondrous experience where
you may have title, rank, privileges beyond your wildest dreams, of
doing things that mundane professionals could never do by constantly
recreating the past in the future and pioneering the HF airways. It is
your Lifestyle.

Ho hum.

>> Instead, you've turned it into a battleground of
>> your own, arrogantly demanding adherence to your personal view-
>> points.
>
>No, I've not turned amateur radio into any battlegrounds nor did I note
>your presence on any of the ham bands this past week.

Is it now a requirement to "have presence" on ham bands in order
to even speak of amateur radio?

Is the FCC requiring all Wireless Bureau staffers to have amateur
radio licenses in order to regulate U.S. amateur radio?

>> You join several others in here in so doing, some past, some
>> present. That's counter to the original purpose of "the service," isn't
>> it? Or is it?
>
>Are you confusing amateur radio with this newsgroup? Is it your opinion
>that I'm required to quietly accept your guff?

If I have to "accept" your guff, then you have to accept mine.

YOU deal with it. [in your own quaint SS manner, of course]

>> Perhaps you embody modern amateur radio, a constant striving for
>> leading the pack in competitive activity? A competition complete
>> with taunts and jibes and outright insults against those who

>> amateur radio has not increased in number commensurate with
>> the growth in population.
>
>Well, old chap, it looks as if you're wrong in your assumptions yet
>again.

No, old chop, I don't "assume" anything. I tell it like it is. You are
just another arrogant control-freak wanting others to be subservient
to your viewpoints. You can't accept a damn thing if it isn't in line
with your holy opinions.

>It is a cinch that you don't embody any of amateur radio--past,
>present or future.

Absolutely TRUE. I've been a professional for over a half
century.

Herr Robust must think that professionals are not required to have
any recreation. Is it that way in your SS?

>of which you accuse others. You are--what is it you call
>it?..."beligerant" toward radio amateurs who tire of your tales of life
>at ADA a half century ago.

So...if the U.S. Army hasn't been using OOK CW on HF for six
decades, that is "tiring?"

You must not be tired. You must be in coma. You are not
conscious of anything that has happened in the last six decades.

>> Enjoy your little clique of morse code uber alles in amateur radio
>> where the "bands" are only on HF. Feel superior that you've met all
>> the criteria and standards established by long-gone amateurs of past
>> times. You are important, superior, vital, and that is all that
>matters.
>
>I enjoy morse code, SSB, FM, RTTY, Pactor and several other modes on MW,
>HF, VHF and UHF. My "little clique" numbers hundreds of thousands in
>this country alone. I haven't noted your presence.

You wouldn't note anything. All you can see is your own glorious,
glowing presence radiating back at you.

No problem. YOUR presence hasn't been noted in any professional
writings or periodicals.

>> You should be demanding that ALL test for high rates of morse in
>> order to become fully FDA licensed as a ham. Condemn all those
>> who cannot learn, will not learn, nor share your opinions.
>
>Morse or no morse, consider yourself condemned.

"Condemned" only to calling an asshole an asshole.

Not very holiday-like but it is true.

>> May Santa bring you an irrepairable intermittent in your favorite HF
>> transceiver along with a truckload of dusty, high-sulphur-content
>> coal in your stocking. Merry Christmas.
>
>Do you really know of any irrepairable intermittents?

Yourself.

>I have no need of
>the coal. I heat with gas.

Everyone is aware of the "gas" you emit in here.

Say goodnight, Gracie.

>
>Now would you mind answereing the question: "So, give us an EXACT
>number of ARRL members."

He cannot, so, as his "representative" in here, I will. :-)

According to the ARRL's own information, their last Publisher's Sworn Circulation Statement was end of June, 2003.

At that time ARRL membership was 155,132.

Of those, 19,180 were Life Members.

All of the information is from ARRL's own website under QST Circulation. There are some apparent discrepancies on that, probably due to "creative rearrangement" of the data. For example, the "average monthly paid circulaion" (six months, ending at end of June) was only 142,992. Between that and the indicated membership is 12,140 unaccounted for and not explained by any sales to library/institution subscriptions (only 891) or net single copy sales (only 1,784).

In the "average monthly paid circulation by type," the number of issues to associations and members (including Life Members) was 140,317 and, with libraries and single copy sales, adds up to 142,311. That's off of Cathy's statement of 142,992 by 681. ?

If there were 682 thousand total U.S. amateur radio licensees at the end of June, 2003, then ARRL membership is only 22.79% and LESS than a quarter.

Explain to me why this is so "necessary," high holy god of ham.

>2. It is not my life's ambition to work Frenchmen out of band.

I'm not keen to work them IN band.

Why is that so necessary, high holy god of ham?

>3. It is not my Life's Ambition to immortalize morse code as the
> epitome of amateurism in an avocational radio activity.

But it IS YOURS, right, high holy god of ham?

>I can deal with that.

You can't deal a deck of cards...much less deal with debate on
issues...you always switch to insulting each and every person
who disagrees with your opinions.

>> Now that all the Techs have been chased off of VHF, where do you
>> 'spect them to go?
>
>Really? The Techs have been chased from VHF? When and how did this
>transpire? How would it keep Leonard from obtaining a code-free
>license?

Why must I obtain a "code-free license?"

Why can't it be a "coded" license?

I've had a code-free license since 1956.

Any CBer has "HF access" everytime s/he pics up the mic...so
what?

You have NOT had "access" to the Amateur Radio Service, save via
this forum or as a guest operator.

You are unlicensed.

> The discussion should be about the federal regulations for an amateur
> radio license regulation, not the individual "motivations" of any
> aspirant to an avocational radio activity.

Thank-you, SuperModerator. You may now retire to the nearest
phonebooth to resume your secret identity as Sir Anderscum of
Kaliphornya.

> You constantly insist on personalizing everything about those who do
> not share your holy and illustrious viewpoints. That is your problem
> and you continually foul this newsgroup with arrogant remarks against
> the person of those of opposite opinions. Not my problem but

> certainly yours in attitude.

Amateur Radio >>IS<< a "personalized" service. It can be
whatever the licensee wants it to be.

As for any remarks made in THIS forum, this is NOT Amateur Radio,
and YOU have NO RIGHT to whine about any name calling. You are Number
1 on the Hit Parade of Name Callers and Antagonizers.

You reap what you sew.

> Amateur radio is supposed to be a recreation, a fun activity involving
> radio, licensing required only because of physics of EM waves and
> federal regulation. Instead, you've turned it into a battleground of
> your own, arrogantly demanding adherence to your personal view-

> present. That's counter to the original purpose of "the service," isn't
> it? Or is it?

Better re-read paragraph 1 of Part 97 again, Sir Putzalot.

Once again you insist on ignoring what the FCC says. Although it
obviously IS fun and great recreation, that is ancilliary to it. The
one here who is arrogantly demanding adherence to personal views is
YOU. Anyone who dares to suggest anything contrary to the Words of
The Professional is immediately attacked by you.

> Perhaps you embody modern amateur radio, a constant striving for
> leading the pack in competitive activity? A competition complete

I agreed with his view that amateur radio has a divide between those
who can accept change and those who cannot.

His view was thrown out by Steve because Len had no amateur license
and dare not have any views whatsoever on amateur radio.

I have a license and agreed with Len's view, so now it's "attack,
attack, attack," like rabid dogs. Pack mentality. Bad dog.

Well, guess so...however, 40 MPH is the minimum speed limit on some roads...

Oh, and as to JJ's claim (backed up with a commentary <Giggle> from a newspaper) that the left lane is for passing only? Well, my hubby and I have been extensively searching for this in the Texas Code and haven't found it yet. Then, there's the signs that currently say "slower traffic keep right" that are supposedly all over the place and being replaced with "left lane for passing only." I checked my whole route yesterday and there's not a sign to be seen--of any type--indicating anything about lane travel. So, I called some folks who I knew were traveling up from Aransus. The saw one sign all the way up from there that say "slower traffic keep right."

I was also contemplating the safety of having a traffic law that would apply to all highway travel...and it would really impede traffic. There are so many people getting on and off on the highways in the core area of the metroplex; as well as so many left lane exits for other highways and streets, that if the left lane were truly for passing only, one may as well pack a boxed lunch to get to work.

I think JJ's leg's been pulled.

Nonsense, Dave. I mentioned three things in that message - "child birth, international affairs with Belarus, and NASA space missions." You intentionally took two of those out of context (a response to your message about code testing), and ignored the third ("Belarus"), to suggest I was talking about something other than government policy. On top of that, you used this nonsense to side-step the real issue being discussed - your false claim that personal experience was required to make informed decisions.

> ...especially when we get into something which
> appears to be a sizeable stretch of earlier
> statements.

There has been no stretch of earlier statements - just your attempts to twist what was actually said.

> (snip) You've mentioned several times about areas
> where our country needs expertise but you've
> offered not even a single example. (snip)

No, I quoted or paraphrased what the FCC said about that. Again, if you don't understand it, don't hold your breath waiting for me to explain it to you.

> (snip) I questioned whether a 5 wpm morse test
> precluded someone from developing such
> expertise.

Since the main goal, as stated by the FCC, is to "...attract technically inclined persons, particularly the youth of our country...," the question is simply not relevant. The second goal to "...encourage them to learn and to prepare themselves in the areas where the United States needs expertise" comes after they enter this radio service. To be honest, I don't believe we can achieve either goal with the continued emphasis on Morse code through code testing. CW should join the other operating modes, allowing each person to discover on their own what really interests them without being pushed towards Morse code through a licensing requirement.

While I obviously cannot be certain, most of those 12,140 issues are probably free handouts, Len - sent to current advertisers, potential advertisers, staff, those who wrote articles or sent pictures for each issue, executives of various companies, industry insiders, news organizations, politicians, and so on. It's a fairly common practice in the publishing industry.

Also keep in mind that there are members who will not show up under the paid
circulation number. In my home, both I and the OM are members. We only get
one magazine as he is a family member under my main membership. So there is
only one paid circulation but two ARRL members.

You're right on this one, Kim. After looking over the Texas Drivers Handbook, this does not appear to be the law in Texas. You can download a copy of the handbook at the Texas Department of Public Safety's website...

http://www.txdps.state.tx.us/administration/driver_licensing_control/dlindex.htm

You'll see the related information under the "Driving the Freeway" section of the handbook (page 9-3 of the handbook or page 53 of the PDF file). For those who don't want to download the 2.5 MB PDF file, it basically says...

"Choosing the Proper Lane
Look twice before changing speed
or lanes and always signal.
- Use the right-hand lane:
If you wish to drive at the minimum
speed limit or below the normal flow
of traffic.
- Using the middle or left-hand lane:
1. Use the middle or left-hand lane if
you are traveling faster than other
traffic.
2. If you plan to leave the freeway
soon, change to the exit lane as
soon as possible."

There are obviously other things in that section, but nothing about using the left lane for passing only. It appears you can use the left lane "if you are traveling faster then other traffic." Of course, if you're traveling faster than other traffic, you're probably also passing them. But, unlike some other states, it appears you don't have to get back into the right lane if there is nobody to pass (if you just want to drive in that lane on an open road) unless a road sign states otherwise.

But to be a Radio Amateur, as defined by the Federal Communicaitions
Commission, one must be a licensee.

You can call yourself a "radio hobbyist", radio afficionado, CBer, or
whatever else may fit. But "Radio Amateur" is not one of them.

>>You could say that you have a great interest in flying an airplane, but

> I don't have a great interest in flying an airplane now. Too expensive.

But..but...but...LENNIE!

YOU have been the one flaunting his copious retirement holdings and
telling us how grand it is to be you!

Are you now telling us you can't afford it...?!?!

The average cost of obtaining a Private Pilot's license in 1974 (when I
finished up my ticket) was around $2700. Todays it's just a bit over $3500.

> I was once a student pilot. Still no license required for that. Not
> even to operate a radio...already had the First Phone, so no 3rd
> Class Restricted permit necessary.

Yes, Lennie...When you were a "student pilot" (snickering under my breath
here!!!!!) a permit was required to operate the radios...One is STILL required
if you intend to operate across an international boundry.

Your "first phone" was not acceptable for operating an aircraft radio.
The FAA did not accept ANYTHING except the Restricted Radiotelephone Permit as
late as the 1980's.

> An amateur radio license isn't legal to use on civil airways frequencies,
> is it?

Only you keep suggesting that "someone" suggests it is.

> I am into flying R/C model aircraft on a casual basis...and have on

> plastic model side of that hobby. I was an International contestant
> in that some time ago.

Then at one time you were required to have a station license for your Part 95 (Subpart C) operations. No...one is not required now. However YOU suggest that it was not required "40+" years ago.

Again, you are in error, "Mr. Radio Professional".

>>Reality points to the fact that you have nothing to do with amateur
>>radio other than to make submissions to the FCC regarding an avocation
>>in which you take no part.
>
> Reality points to the fact that you CANNOT accept any opinions

> beligerantly go after any person who can stand up to you and show
> where your ideas aren't valid.

So far, Your Putziness, you ahve FAILED to make any argument that suggests Dave's "ideas aren't valid".

You HAVE demonstrated your gross ignorance on a great number of radio topics, and an even far greater number of issues (all, actually) relating to Amateur Radio.

> The FCC accepts ALL input on ALL radio services, Herr Robust.
> They don't need "licenses" in any radio service to accept comments.
> I know that is a very foreign thought to your proud, arrogant holiness,
> but that IS true.

Again...YOUR assertion rings hollow. An error. A falsehood.

> I'd like to see YOU address the FCC in the same manner as you
> address others. Good luck on that one now!

Dave! Did you forget to bow in deep reverence to His Radio Holiness, Sir Anderscum the First?

I am sooooooooo (NOT!) ashamed of you!

>Jimmie isn't stating any "facts."

Lennie! Again with the belittling names towards people who don't do it to you.

Do we need to re-post the posts wherein YOU stated you DON'T respond with such cutesy names when not so addressed yourself?

It's been at least five years now that you've been calling Jim "Jimmie", the "pedantic parson", etc.

Why do you lie? Why do you insist on making such obviously irresponsible assertions only to have them fed back to you?

Is being an idiot a family curse?

>Unlike the ARRL...which IS a dues-asking, amateur license required,
> membership organization and political special interest group and a
> publishing business, NCI does not pretend to represent "all" amateurs.

An Amateur Radio license is NOT required for membership in the American Radio Relay League. It never has.

When the ARRL lobbies in washington, it DOES seek to represent ALL Amateurs, dues paying or not.

I have yet to see the ARRL submit any document saying "We represent all Amateurs except..(fill in the names)..."

>ARRL pretends to "represent all amateurs" yet they still haven't
> gotten close to a majority of all licensed U.S. amateurs to belong
> to them. They've not been able to do that for years past.

Yet the ARRL >>IS<< accepted by the FCC and a number of other Washington agencies as THE defacto representive of Amateur Radio as a whole.

This is a fact. It is not subject to YOUR opinion, Lennie.

Sorry.

> ARRL refuses to take a stand on code testing in the USA yet the
> International Amateur Radio Union long ago came out for eliminating
> the code test internationally. Once that happens, NCI has stated
> that it will dissolve, cease to exist as a special interest entity.

The code test requirement as an international regulation has been eliminated.

So I don't see the NCI wrapping things up.

>ARRL is your shepherd, you shall not want...

Lennie is an arrogant fool, we know this well...

>

>Let me think it through for you.

No need to, Brain...but I'll let you flail through this since it amuses you.

>A non-member, me, receives QST. I am included in the annual postal
>statement.

As an individual you ARE a member. If you are not licensed, you are a NON-VOTING member.

>Every library is included in the postal statement.

Identified in the statement. Subtract from the total.

>Every club that subscribes is included in the postal statement.

How can a "club subscribe", Brain? An individual (the trustee) dos that.

>Every foreign subscriber non-member is included in the postal
>statement.

Every foreign "subscriber" is an individual, and is therefore a "member".

>Now would you mind answereing the question: "So, give us an EXACT
>number of ARRL members."

Total magazines printed

minus wasted copies

minus library subscriptions

minus complimentary copies

equals "EXACT" number of ARRL members

(Guess that new math really confounded ya, Huh BRAIN?

What an idiot.

Chuck,
You need to check the W1AW schedule. Is ONLY once a day on PHONE. It's also on more frequencies than K1MAN.

The original point is that they fire up on existing QSOs. The original post did address programming content.

No, the point is W1AW actually sends BULLETINS per the rules and
regulations, which IS PERMITTED. K1MAN has a call in talk show, which is
NOT A BULLETIN and is not legal.

If you have any doubts of that do a google search and put in K1MAN, then
read what the FCC has sent him in the last SEVERAL years.

>Your "first phone" was not acceptable for operating an aircraft radio.
>The FAA did not accept ANYTHING except the Restricted Radiotelephone Permit
>as late as the 1980's.

One could not hold an RP and a higher grade of radiotelephone
operator license (which WAS valid for aircraft use) at the same time.
It was the Radiotelephone Third Class Permit with Broadcast
Endorsement that was not valid for aircraft operation.

The solution was the License Verification Card, the same shape and
color as the RP, attesting to the fact that the holder held an FCC
radiotelephone or radiotelegraph First or Second operator license.
The FAA was quite aware of this situation.

We were asked about that many times by student pilots who held First
or Second Class Radiotelephone operator licenses in that era and never
got any feedback that the FAA wasn't accepting it in lieu of the RP.

I would suspect that in this computers-r-us era of acccounting, the
Membership Department can furnish the exact number of members-in-good-
standing (i.e. paid up to date) in every category as of the last
database entry.

After all, the ARRL -is- a membership organization and any member is
entitled to that information. Getting it may be another story,
however.

Dwight, with all due respect, I think I know a bit about the periodicals industry and Publisher's Sworn Statements. :-)

The seed of this particular sub-thread was the EXACT number of ARRL membership. According to Katherine A. Capodicasa, Circulation Manager of QST, given on ARRL's own web page, the ARRL membership as of the end of June 2003 was 155,132.

Also, on the same ARRL page was the statement of the "average monthly paid circulation" (for previous 6 months). That is 142,992. It is also a difference of 12,140 from the June membership number. That difference MIGHT account for the "family membership" single copies and other things. Might, that is, trying to infer anything from insufficient data is pure speculation such as others have been doing.

In item 3 on the Circulation page is "average unpaid and sample copy circulation per month" of 1,140. That would be freebies, sample copies, stuff sent to potential advertisers, and so forth. [others have tried to imply higher numbers for this as rationalizing

other differences but that is more speculation without facts and
also - obviously - not going to the "official" ARRL pages...:-)]

Now, connecting the dots to other notable numbers, one who
longs for the olden days keeps putting up others' database values
to show that U.S. amateur radio licenses are increasing. [they
are, but only slightly and don't follow the overall population increase]
Yet, on the Circulation page of QST, ARRL membership shows a
slight but definite DECREASE in paid circulation...from 143,904 at
end of January 2003 to 142,311 at end of June 2003, a difference
of -1,593.

Connecting more dots farther apart, clicking on ARRL publications
and QST yields a table of contents of January 2004 issue. On
there is a link to a "Micro Keyer" (CW keyer) which is viewable,
but no other viewable link to more general amateur radio articles
such as making nice front panels for homebuilt equipment. This is
just another subtle bit of business on ARRL's continuing push for
morse code related over and above all other modes. ARRL may
take a "neutral" stance on morse code testing regulations but one
can only take away their code key from their cold, dead fingers...

In truth, a "Publishers Sworn Statement" is SOLELY for the
benefit of potential ADVERTISERS. QST subsists almost entirely
on the income of advertising to pay for printing, author compensation
(miniscule by comparison to other periodicals), "fulfillment"
(publishing-speak for subscriptions), and QST direct staff. Note that
QST has used a heavier-weight glossy paper than most periodicals
(which costs more) but has gone to slightly lower-weight glossy paper.
Anyone can go through any issue, count column-inches, and
determine the issue's Real income within 20% or so just from QST's
rates (also on the web site, different page).

Advertising pays the bills at a periodical. Advertising revenue is
finite so all periodical publishers will condense and "tailor" the
Publisher's Sworn Statements as much as they can...so that
potential advertisers are convinced to pay them instead of any
competition. Since advertising budgets are finite, some periodicals
just don't get as much income...and some may have to quit when
there isn't enough income to pay bills.

There's bound to be someone who shows "exceptions" to the rule
that advertising pays the bills. I'm familiar with that. As one who
gets a number of trade periodicals (EDN, Electronic Design, RF
Design, Microwaves & RF, PET, etc.) entirely without any monies
from me ("controlled circulation" magazines), that's proof enough of
my statement. There are MORE "free" trade publications in the
USA than there are subscription-fee publications.

Parishoners at the Church of St. Hiram have been busy rationalizing
and speculating on the "reason" for differences that I noted. :-)
They are all wrong, but are convinced they Know...ARRL can do no

wrong.

All that can be gleaned from the QST Circulation page is the number (and EXACT number) of ARRL membership at any one time.

ARRL is basically three organizations in one: A membership club; a political-action special interest group; a publishing business. Members try to rationalize others' negative criticsm by using only one or two of the triad as "justification." In truth, ARRL tries to be too many things under one roof and that, if too inflexible, may be its eventual undoing.

Merry Christmas to you and yours, Dwight.

>Merry Christmas.

I know. Isn't it awful? :-)

It's so comforting to know that one can read and repeat Cathy's Circulation page on ARRL's website as a "LIE!" :-)

There are other little gems from da Wundermarine in here, such as its impossible for a First Phone to be used in U.S. civil aviation band radio communications since a Restricted 3rd Class "must" be used...which was nonsense in 1962...and later when the Commercial licenses got converted to the General Radiotelephone. He could not give exact figures on QST circulation for any issue (despite being only a few key-presses away from the main web page) but he "Knows" the exact costs in certain years for student flying lessons. The circulation for QST is very much amateur radio related but the student pilot costs are not. [he might have been hit by a couple of close isobars once and had an adiabatic lapse rate decrease...:-)]

Stebe thinks that the "majority" of U.S. amateur radio activity is above HF. That must mean that he never listens below 30 MHz. Probably true since all he can do is transmit over-modulated shouting and hollering about close-order drill below 30 MHz. Hup too tree foah, ya lie, ya lie, ya lie! :-)

The ONLY way one can be "interested in radio" is to get a ham license and be proficient in morse code...with extra gold stars if one was once a member of da murine corpse. Doesn't hurt if one was a purchasing agent for a small modem and set-top box company in the "south" for a few months...that counts as "being in radio engineering!" :-)

Amateur radio FUN is only "ancilliary" to the U.S. amateur radio SERVICE. Ham radio is all about wearing a Lifestyle mental uniform, marching in ranks to the morse drumbeat of the 1930s, and being ready, willing, able to "take over communications" when all the commercial/professional infrastructure FAILS in an emergency? That's the thoughts I see expressed in here.

There can be no fun in the ham SERVICE. It is all about duty, dedication, close-order drill on the proper and correct jargon and prosigns. [why the name "prosigns" when there is so much hatred of the pros?] Hupp, too, tree, foah! Beep, beep, beep!

It's a wonderful life. [but all the cast players are mentally SK]

Merry Christmas and Happy Holidays, Brian, all the best to you and your family.

That's the point. "Unofficial opinions". That alone, regardless
of what you say, creates an impression that there is an "unofficial
'NCI' opinion". If a person has their own opinion about
something, that isn't "official" or "unofficial" by itself. Adding the
"unofficial opinion" label in talking about an NCI
member DOES create a different perception than simply
saying John Doe has an opinion that scares me.

> Back to now:
>

Then how can you even make the statement that some "members" have
opinions that scare you IF you can't even identify them.

> I don't like Han's entry level license requirement either. He's a member.

BUT, his NCI membership doesn't tie NCI to Han's personal support
for an entry level license.

Cheers,
Bill K2UNK

4806. Psych Expert Admits Mistake

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-23 22:12:34 UTC
From: Shrink HQ <hq@shrinkhqnuts.org>
Message-ID: <bsaekg$b71$0@pita.alt.net>
Source record: 84382

Your Shrink reporter was on scene recently as a Freshman psych
student proved world respected psych expert
Dr Heirreech Viktor Von Rebenshaldernut wrong.

Freshman Ludvigstatic N'Attic informed Dr Von Rebenshaldernut
that a radio station in Maine was driving several dozen men around
the U.S. into psycho-frenzies several times a day by simply
coming on the air.

Sure enough. When the Bellprade Ponds, ME station began
broadcasting, dozens of men began shrill screams, sounding like,
"It's my sandbox, it's my sandbox, get out, shutup, my friends
& I was here first..."

Originally highly skeptical such a thing was ever possible, the
good Dr Rebenshaldernut readily admitted his error and promised
to fund his student's studies into the strange psycho reactions which the
Bellprade Ponds, ME station was causing to a minute segment of
the ham radio population.

No argument there. The point is that morse is no longer a needed
knowledge base and the end of morse testing doesn't create
a void in terms of the "net effort value" of learning what is
needed to pss the tests.

> > The morse tests have completely disappeared for General

True, but in actuality you usually qualify as tech+ (even if
note actually issued a unique license).

> And they don't do tech
> plusses any more. My Tech license had no code test in it.

True, but passing the 5 wpm gives you the functional equivalent
plus you then have lifetime 5wpm credit I believe.

> >>I want to see something in

Not unreasonable, but it probably won't be addressed as a quid pro quo
of ending morse testing by the FCC.

> I want the new ham to come on board with some idea of what is expected

>
> Show me where I said it was!

Then why the reference to NCI when commenting about W5YI's
opinions on other than code testing? Kinda like saying John Doe,
member of Organization X has racist opinions. Why would anyone
say such a thing unless they wanted others to think that Organization
X has racist motives.

> > As to other NCI members, assuming you can ID someone,

But even if the poll was well done it ONLY shows a snapshot of opinion at
that time. Given the prior (several years prior) almost universal
opposition to droppping code and then seeing a significant shift
from that 90% or more support to something closer to 1/2, one

could easily conclude the shift was not going to stop and eventually
more hams would support ending all code testing than keeping it.

Are you saying that NCI does not reciprocate my support for their goals?
That would certainly be a strange sort of membership-organization.

Dave's posting are an RRAP universal constant.

Nobody knows why the constant is there, but it always is.

Here is what I found in Chapter 6 of The Texas Driver's Handbook, page 62...quote:

KEEP TO THE RIGHT

NEVER drive on the left half of the road in the following instances:

1. When pavement markings prohibit driving on the left (a "No Passing Zone").

2. When there are two or more traffic lanes in one direction. (In other words, don't "drive" in the left lane/s...my words)

3. When 100 feet (about five car lengths) of or crossing an intersection or railroad crossing.

4. When on a hill, curve, or any other place where vision is limited.

5. Wnen within 100 feet of a bridge, viaduct, or tunnel.

You should always keep to the right half of the road EXCEPT:

1. When passing another vehicle on a two or three lane street. (In other words, after passing you should move back to the right...my words).

2. When driving on a one-way street.

3. When the right half of the road is blocked.

End quote:

Sounds pretty simple, the right lane is for passing, you should always keep to the left except for passing.

For purposes of upgrading, the code credit is good for only one year. If you do not upgrade within a year, you will have to retake the code test.

For purposes of operating using the equivalent of the old "Tech Plus" privileges, assuming that one stays at the Tech level license, it is good for a lifetime.

However, the latter is a somewhat self correcting situation for the most
part as, except for life members, the membership must be renewed on an
annual basis.

"Of whom are you speaking, old man?"

Right in NCI's bylaws it says that any member who publicly disagrees with their
stated position on code testing is subject to expulsion.

Fact or fiction?

They also require that all members agree to their prime directive goal as a condition of membership.

Fact or fiction?

No one who disagrees with their core policy can be a member of NoCode International.

Fact or fiction?

> He is simply manufacturing an
> argument for the sake of something to argue about. SOP for Jimmie.

"I tell it like it is. You are just another arrogant control-freak wanting others to be subservient to your viewpoints. You can't accept a damn thing if it isn't in line with your holy opinions."

> [he seems to need something, anything, to argue about every day]

"Reality points to the fact that you CANNOT accept any opinions contrary to your own with grace or gentle manner...you constantly, belligerently go after any person who can stand up to you and show where your ideas aren't valid."

> No Code International is most of all a political special interest group.
> It asks for no dues, does not demand a license of any kind in order
> to belong.

But it does require absolute allegiance to its prime directive of eliminating all code testing. No disagreement or dissent allowed, under penalty of expulsion.
>
> Unlike the ARRL...which IS a dues-asking, amateur license required,
> membership organization and political special interest group and a
> publishing business, NCI does not pretend to represent "all" amateurs.

NCI says that it knows what is best for the future of amateur radio.
>
> ARRL pretends to "represent all amateurs"

Where does it claim that? Show us an exact quote.

> yet they still haven't
> gotten close to a majority of all licensed U.S. amateurs to belong
> to them. They've not been able to do that for years past.

The exact size of either organization is unknown, but from all davailable data it is clear that ARRL, despite dues and annual renewals, is at least 30 times the size of NCI.

ARRL accepts for membership those who disagree with and want to change their policies. NCI does not.

There has been an amateur license available in the USA without any code test for almost 13 years now. ARRL membership voting rights are the same regardless of license class.
>

> ARRL refuses to take a stand on code testing in the USA yet the
> International Amateur Radio Union long ago came out for eliminating
> the code test internationally.

"Strange words. According to the FCC, not to mention a couple of Acts of Congress (one in 1934, another in 1996), only the FCC created the class of the (no-code-test) Technician license. Not the US Congress. Not the ITU."

> Once that happens, NCI has stated
> that it will dissolve, cease to exist as a special interest entity.

Perhaps it will, perhaps it won't.

It seems you want ARRL to dissolve, cease to exist. You accept the organization that does not allow dissent, and reject the organization that accepts and allows dissent. Why?
>
> NCI is a very small group,

What is its exact membership?

> has no law firm on retainer in DC,

"Oh, my, were you admitted to a bar this afternoon and thought you had become a legal beagle? Arf, arf?"

> nor
> does it have another group on retainer to lobby the FCC.

Why would that be needed for a single issue?

> ARRL does.
> NCI directors get out and personally lobby for action on elimination
> of code testing, including all the way to Geneva and WRC-03...and
> not on a multi-million annual budget available to the ARRL.

WK3C was at Geneva for reasons other than S25.5. His way was paid for by his employer. He has stated that right here in this newsgroup. He did not go on his own nickel, or NCI's.

"I'd like to see YOU address the FCC in the same manner as you address others."

"When I see "cogent debate" from yourself, sans the snarly sarcasm...from yourself, I'll be more than happy to do REAL debate with you.....

You can't do it. Have never done it."

You get one guess who wrote the wors in quotes.

Huh ?? Comprehension problem? Try "the other left".....

The question wasn't about driving on the left-hand side of the road,
it was about driving on the right-hand side of the center of a road
where traffic flows in both directions, or at the left-hand side of
a one-way road with two or more lanes.

In California traffic engineering practice, numbering starts at the
furthest left-hand lane in each direction and numbering proceeds to
the right - IOW no matter how many lanes of traffic in that
direction, the #1 lane is the "fast" or "inner" or "left-hand" lane
-- still on the right hand side of the road if traffic flows in both
directions and there is a demarcation of where the "center" line is.

This is independent of whether one may drive in the #1 lane except
when passing.

Did I succeed in confusing you further ??

Opps, caught me Phil, seems the right dosen't know what the left is doing. Should be the other way around. Left is for passing, right is for driving.

The "left half of the road" refers to the left half of the entire road. IOW,
the part meant for traffic in the other direction!

> in the following instances:
>
>1. When pavement markings prohibit driving on the left (a "No Passing
>Zone").

Solid double yellow line
>
>2. When there are two or more traffic lanes in one direction. (In other
>words, don't "drive" in the left lane/s...my words)

No, that's not what it means.

It means that if there's more than one lane of traffic in the direction you are
traveling (say, a road with two northbound and two southbound lanes) you should
never cross the center line.

IOW, passing by crossing the center line is only allowed on roads with one lane
in the direction you're traveling
>
>3. When 100 feet (about five car lengths) of or crossing an intersection
>or railroad crossing.

Whether the train hits the car or the car hits the train, the car loses.
>
>4. When on a hill, curve, or any other place where vision is limited.

Usually double yellow line anyway.
>
>5. Wnen within 100 feet of a bridge, viaduct, or tunnel.
>

I suggest 40 meters, if you're seeking one band. It has good DX
propogation characteristics throughout the year, and there is a lot of
CW activity. After 40, your next best bet is 20, which is where I
spend most of my operating time.

How refreshing! A new ham who actually passes his General, gets OTA
with CW, and isn't whining about it! I'm especially impressed by the fact
that Mr. Doughty is a new father with a young baby, but is not using that
as an excuse not to get in some operating time! Moreover, the non-voice
nature of CW is giving him the means to do so without disturbing the
harmonic's slumbers. Good work, BBL! Carry on, and I hope to work you
someday!

Not so simple in city freeway driving. Following these guidelines literally would mean that cutting back and forth from lane to lane if you can only move to the left to pass each vehicle individually. And don't forget the left-hand freeway exits.

Congrats on getting the ticket! I spent a lot of time in the wee hours
of the morning on the 40 meter novice band with the new daughter propped
on my crossed leg, working the key with one hand and holding the bottle
with the other. Now the daughter has two of her own and another on the way.

I'm not sure about that. When I took my original General test and
flunked the Morse code portion, I was issued credit for the written part
which lasted a year (or was that a ear and a day?) So maybe passing
element 1 would be the same?

I wonder? Quid pro quo or not - and I agree it isn't strictly, I would
wager that a whole lot of things are addressed before this one is over.
There are a lot of wordings that need replaced or changed if Element 1
goes away. There are many privileges that will need visited and altered
as needed: tech and tech plus for instance. Are they now the equivalent
of Generals? So there *is* a lot of work to be done.

None of these are answered simply. There will be a major overhaul in the
near future, IMO. And I bet it comes about when Element one is eliminated.

> opinions on other than code testing?

It's like separating Ex-Presidents from their political parties.

And all this aside, my major gripe with NCI is that they don't have any
post Morse plan. Just saying Element one goes away, and all is well, is
naive.

If I had an organization that proposed the elimination of Element one,
there is no doubt that I would have a whole set of proposals that I
would offer in it's place.

And that is the problem. There is no action without a reaction or
consequences. Something like Morse code testing, which is interwoven
into the fabric of the ARS as much as it is, cannot simply be yanked out
without consequences.

> for a lifetime.

And this is just one of the things that can give you a headache:

Should Tech plus people be given a General (or whatever replaces it)
license? After all, they passed the Element one test, the old barrier to
HF...... BUT....

Since there is no barrier to HF from the code test, and Tech pluses
might get HF privileges, should ALL tech's get HF privileges since
they took the same test? After all the only difference is the Tech plus'
took Element one, which is no longer, which means it isn't a
requirement, so they shouldn't have HF privileges on a defunct test
requirement.............. SO it only follows.......

HF privileges would in the future be granted by taking the equivalent
of a Technician test?

Yup, simple indeed.

JJ, sounds like you found something that contradicts what Dwight found, and vice versa. The point is, there is nothing that my husband or I have been able to find in the TAC (Texas Administrative Code)--which would be the *LAW*. The manual and words like "should," etc., are not laws--they are suggestions. I suggest to you that *if* it were illegal--ILLEGAL--to drive in left lanes on highways not marked (and the highways I am driving are not), then there'd be no threat to the budget here in Texas.

Simple 'nuff, find a *LAW* and I'll accept that it is illegal to drive in left lanes, otherwise, you're allowing yourself to be impressioned for the benefit of winning a side to an argument--which, of course, I am also. Seems I'm winning, though... Law, JJ, not suggestions, not a manual, not someone's (as in the circumstance with your submitted commentary) interpretation, but law.

For purposes of Technician's operating with the equivalent HF privileges of the old Tech+, the 5wpm is a lifetime credit should you remain a Technician.

For purposes of upgrading, the credit is good only for one year (actually 365 days). So if you don't pass your General written within 365 days of passing the Morse code test, then you would have to retake the test to upgrade.

If any change is made, I would bet on the current Techs getting the same privileges as the Tech+ or Tech with HF without having to take a code test. This is probably the simplest thing the FCC could do. As to whether the FCC will change it for other licenses, I wouldn't want to make any bets. As for automatic upgrades, I doubt it. They didn't do it the last time around when they reduced the number of classes to three for new licensees and there is no reason to do it this time.

I have a question. There is no doubt that NCI is a political
organization. So this is a fair question.

Why don't you ask a good conservative Republican what they think of the
new Govorner of California's stand on say, abortion, or say same sex
marriages? So while his opinion doesn't really have that much to do with
the national scene, therefore it isn't relevant to anything but himself,
I do know that there are plenty of the above mentioned conservatives
that don't think a whole lot of him or his opinion at all.

But he certainly serves as another data point. Why don't we go over
some stuff.

You (apparently) don't support any change in anything except the
elimination of Element one.

W5YI supports what to me seems to be a radical simplification and
bastardization of the ARS requirements.

Hans has a plan that I generally don't like. I must say that he does
address the issue of needed change when element one disappears.

So forgive me, but I think I can form an opinion and defend it.

All I propose is strengthening the requirements of what exists now, and
otherwise leaving things intact. I would really encourage going into the
regulations and cleaning them up after the changover.

And yes, since NCI sees itself as the vanguard of change, I see NCI as
derelict in it's duties. To just say "eliminate the Code test" really
isn't enough.

Sorry Hans! Only elimination of the Test!

And that is what bothers me about NCI.

But it is a great way to dodge responsibility! 8^)

HF privileges were granted in the past by taking a test far less demanding
than the current Technician test.

And Technicians of the past took the General written test AND a Morse test,
but were not allowed on HF, but they could get a (simultaneous) Novice
license and operate on HF (even though the General written they'd taken for
Technician didn't allow them on HF or 2 meters).

And you new kids think MY licensing proposal is strange!

>there is an extreme amount of slack granted for "unofficial" positions
>on other matters regarding amateur radio! Why doesn't NCI have a
>position on anything else?

Because it's a one-purpose organization.

Some years back, there was a petition by a VHF group to change the rules slightly. As you know, the lowest 100 kHz of 6 and 2 meters are CW only, and the rest of amateur VHF/UHF allows all authorized modes everywhere.

Folks in that and other VHF/UHF groups are "weak signal" fans, and had noticed increased QRM from local FM simplex folks. They'd be trying to work some SSB DX on, say, 144.200 and would find themselves buried by local FM simplex ops who had simply dropped down there from a repeater. Note that the typical ham FM signal is maybe 5-6 times wider than an SSB signal and you'll begin to see the problem.

So the VHF group proposed eliminating the CW-only 100 kHz, and instead setting up the lowest 300 kHz of 6 and 2, plus about the same amount just above 432 MHz, as "narrow band preserves" - no modes wider than 3 kHz allowed.

NCI wrote a strongly worded opposition to that proposal. The rallying cry was "no setasides for legacy modes!!" (SSB is a "legacy mode").

Now of course anyone can comment to FCC. And there can be an honest disagreement about subbands-by-mode. But it was really odd - N0BK would say surreal - to see such comments by a one-purpose group on a subject that had absolutely nothing to do with code testing, and which involved bands completely open to Technicians.

After having this discrepancy pointed out, NCI took more of a one-purpose stance, and has not gotten involved in any issues other than "drop Element 1"

Even stranger is the fact that there was a period of time (1970s?) when FCC did not allow the simultaneous possession of both the Novice and Technician licenses, so when a ham passed the written test for Tech, he/she lost all HF privs - even though both licenses required the same code test.

<mcoslo@adelphia.net> writes:

>And all this aside, my major gripe with NCI is that they don't have any
>post Morse plan. Just saying Element one goes away, and all is well, is
>naive.

Agreed but there's a reason they have no other plan. The reason is that such a
plan would create several problems.
>
> If I had an organization that proposed the elimination of Element one,
>there is no doubt that I would have a whole set of proposals that I
>would offer in it's place.

But that would create several problems:

1) The stated purpose of NCI is to eliminate the code test and nothing more.
Proposing other changes would exceed that charter.

2) The organization has said it would cease to function in any country where
the code test is totally eliminated. If a govt. drops the code test first, NCI
would have to violate that rule to present a plan with other changes.

3) There is bound to be a wide range of opinion on what the other changes
should be, even in an organization as small as NCI (5000 members, tops!) Plans
would range from "one license class, minimal written test" to "more license
classes, beefed up written tests, experience requirements, required upgrading"
and all sorts of other things. Look at all the discussion over Hans' simple
proposal.
Imagine all the headaches trying to get a consensus.

4) Any plan would doubtless upset some members to the point they would then
resign.

5) Putting together any such plan is a lot of work. Particularly once folks get
hold of it and start asking questions. Again, look at all the issues Hans'
simple, straightforward proposal has raised. Now add the work of turning that
revised idea into FCC rules language...

6) If NCI did it here, some might say they'd need to do it in other countries.
Even more work.

> And that is the problem. There is no action without a reaction or
>consequences. Something like Morse code testing, which is interwoven
>into the fabric of the ARS as much as it is, cannot simply be yanked out
>without consequences.

Of course! But folks disagree on what those consequences would be. Some say "We'll get a horde of undisciplined freebanders!" Others say "We'll get a bunch of RF engineers who will revolutionize amateur radio!"

But NCI won't be around to take the heat....

The reality is likely to be very different.

>which lasted a year (or was that a year and a day?)

It was neither. CSCEs are good for 365 days. Leap years have burned a few hams.

Note that in nonleap years the calendar advances one weekday per year. IOW Dec. 24 was a Tuesday in 2002 and is a Wednesday in 2003. But in 2004, Dec. 24 will be a Friday.

<mcoslo@adelphia.net> writes:

>Should Tech plus people be given a General (or whatever replaces it)
>license?

If they passed their Tech written before March 21, 1987, they can get a General
with no additional testing. The rules have provided for this testless upgrade
since restructuring.

Even if they let their old license expire, they can get credit for current
Element 1 *and* Element 3.

>After all, they passed the Element one test, the old barrier to
>HF..... BUT....

"barrier"??
>
> Since there is no barrier to HF from the code test, and Tech pluses
>*might* get HF privileges, should ALL tech's get HF privileges since
>they took the same test?

Sure - and that has been proposed by several of the petitions before FCC,
including NCI's and NCVEC's.

The surreal part of it is that those privileges consist of Morse privileges on
three bands plus CW and SSB privileges on one band.

>After all the only difference is the Tech plus'
>took Element one, which is no longer, which means it isn't a
>requirement, so they shouldn't have HF privileges on a defunct test
>requirement.............. SO it only follows.....

>of a Technician test?
>
> Yup, simple indeed.
>
Depends entirely on the wording of the changes if Element 1 is dropped. Some
folks want to take the incremental approach - just drop Element 1 and see what
happens.

My guess is no change in the number of new hams coming in but they might test straight to General because of the differences in privileges or they would test for General very shortly after getting the Tech. There would be a surge of upgrades for awhile which would taper off. There would be some temporary chaos on the HF bands until the new operators learn the ropes. Plus DX chasing would jump for awhile and that would be chaotic for awhile for the same reason, however I would expect this to taper off as some of the people either achieve their goals or become disenchanted and quit doing it.

The reality is probably very little actual change.

Source record: 84433

Dear Friends,

It becomes my painful duty to write you a letter of apology instead of sending you the holiday remembrance that I had intended for you.

Knowing so well the appetites, likes and dislikes of my close friends, I made up a list of twelve of my best friends and went down and bought several quarts of "Royal Canadian" 18-year-old whiskey. Nothing but the very finest for my friends. I took this home and put it in my cellar and intended to put it up in nice Holiday wrappings and send it out to you just before the New Year.

My wife got to fumbling around in the cellar and found the liquor and didn't understand just what I intended to do with it. So she came up and told me to empty the contents of every bottle down the sink, or else. So I proceeded with the unpleasant task.

I withdrew the cork from the first bottle and poured the contents down the sink, with the exception of one glass which I drank. I extracted the cork of the second bottle and likewise poured the contents down the sink, with the exception of the glass which I drank. I pulled the sink from the next bottle from the cork of the next and drank one sink out of it and threw the rest down the glass. I pulled the sink out of the next glass and poured the cork from the bottle. Then I corked the sink with the glass, bottled the drink and drank the pour.

When I had everything emptied, I steadied the house with one hand and counted the bottles, corks, glasses, and sinks with the other, which were twenty-nine. And, as the houses came by, I counted them again and finally had all the houses and bottles and corks and glasses and sinks counted, except one house which I drank.

So this accounts, dear friend, for your not receiving a more stimulating present than this letter.

And Merry Christmas to those who partake,

de K0HB

I agree 100%!

But what constitutes "the basics" is a question that will get all kinds of responses. And whether there should be just one level of license, or several, is another wide-open question.

Not so fast tits.

> Law, JJ, not suggestions, not a manual, not
> someone's (as in the circumstance with your submitted commentary)
> interpretation, but law.

Here is the response I received from Bud Kennedy, the author of the article.

Hi Bill,

Thanks for your note.

Your friend obviously thinks she knows everything, so she probably will think she knows more than the law or the DPS. - (boy does he have you pegged - jj)

I quoted the law in the column. It's from 545.051 --

http://www.capitol.state.tx.us/statutes/tr/tr0054500.html

+(b) An operator of a vehicle on a roadway moving more slowly than the normal speed of other vehicles at the time and place under the existing conditions shall drive in the right-hand lane available for vehicles, or as close as practicable to the right-hand curb or edge of the roadway, unless the operator is:

+(1) passing another vehicle; or
+(2) preparing for a left turn at an intersection or into a private road or driveway.

This law is not defined by the speed limit. It is defined by the "normal speed of other vehicles."

In other words, if you're driving slower than other drivers, you "shall" move over.

Write again or anytime

Well Kim has several times stated that she was driving at the normal speed of the other drivers in the lane. So your quotation makes Kim correct. That a single individual wants to drive much faster than the rest of the traffic does not make Kim wrong for not moving. She may or may not be unwise depending on the overall circumstances but from this quotation is not doing anything illegal.

> or two of the triad as "justification."

You have nothing but negative criticism and insults, Len. You're playing a sort of Zen game where you never say what something is or should be but only what it isn't, or should not be. Why is that?

> In truth, ARRL tries to be too
> many things under one roof

What would you have them change besides their code test policy?

> and that, if too inflexible, may be its
> eventual undoing.

It's clear you'd be really happy if ARRL disappeared.

ARRL and QST have existed continuously since 1919. There is no larger amateur radio organization on earth. At least 30 times the size of NCI....

You seem to think that amateur radio doesn't need a strong national organization. Reality shows that such an organization - or more than one! - *are* needed - otherwise, amateur radio would slowly be legislated out of existence. You'd like that, wouldn't you, Len?

To give just one example - the BPL issue.

Since you have no intention of becoming a ham, Len, why doies any of this matter to you?

It should be obvious to the most casual of observers that if you are in
the left lane and other traffic is attempting to go faster than you are,
even if you are driving the normal speed, speeding, or whatever, you are
obliged to move to the right lane to let the faster traffic pass. That
is stated pretty plainly. Even if you are going the same speed of the
vehicles in the right lane, you cannot block faster traffic in the left
lane. The law states that the operator of a moving vehicle "*shall*
drive in the *right* hand lane unless the operator is: (1)passing
another vehicle." Pretty plain, if you are in the left lane and going
the same speed as vehicles in the right, then you are not passing, so
you are obliged to move to the right.
I bet that if kimmygirl is in the left lane and approaches a slower
vehicle in that lane she certainly expects them to move over so she can
speed on her merry way.

Give up on it, JJ. I saw that section too, but it refers to driving on the opposite side of the highway (note the "left half of the road" above), not driving in the left lane of a multiple-lane highway (in the left lane of multiple-lane highway, you wouldn't be on the left half of the overall road). There simply doesn't appear to be a "left lane only for passing" law in Texas.

The drivers handbook was written by a government agency to provide guidence and simplify the laws within Texas. If something is in that handbook as a "must," you can be fairly certain there is a law somewhere to back it up.

You are being deliberately obtuse. Kim repeatedly stated that she was going the same speed as the other cars in the lane that she was in not the lanes to her right. She was going with the normal flow of traffic in the lane she was in. It should be obvious to the most casual observer that she was not blocking traffic in the left lane as she was going at the speed of the traffic in that lane. That ONE car tries to force her to move over does not constitute impeding the flow of traffic as the blockhead that is trying to get her to move over will have to attempt the same maneuver with all the other cars in the lane.

> Sorry Hans! Only elimination of the Test!

Essentually correct. NCI doesn't take positions on the wider
scope of testing and opinions held by any individual member.
Indeed, one could readily see where two members might have totally
opposite opinions on written testing.

> And that is what bothers me about NCI.

Why that bothers anyone makes no sense to me. Indeed, we are
damned if we do, damn;ed if we don't. We formed as a "one issue"
organization and now some folks are bothered by that...strange,
truly strange.

> But it is a great way to dodge responsibility! 8^)

Dodge responsibilities? So exactly what does that mean?
What specific "responsibility" is NCI dodging?
Did I miss some unstated responsibility of NCI and/or any
other ham club or organization?

Cheers,
Bill K2UNK

Who cares, so what? In any organization there will be a range
of opinions regarding issues. NCI was formed as and still is a ONE
issue organization. Why that fails to sink in to some folks still
amazes me. The ONE area of universal agreement amongst
NCI members is ending all code tests. If an NCI member does not
support that goal, then he or she should really consider dropping
NCI memebrship.

> >>Back to now:
> >>
> >>Who is broadening any claim? I even put unofficial opinions on my

But neither of those people speak for NCI when offering
their opinions on non-code test issues. THAT is the
important aspect of my discussion here.

> >>I don't like Han's entry level license requirement either. He's a
member.
> >
> > BUT, his NCI membership doesn't tie NCI to Han's personal support
> > for an entry level license.

> But he certainly serves as another data point. Why don't we go over
> some stuff.

Hans is a data point as to Han's...not any position for
or against an entry level license by NCI.

> You (apparently) don't support any change in anything except the
> elimination of Element one.

Now you are making things up. What I support overs a wide
range of stuff. The distinction again is that if, for example, I
were to support an entry level test, it would be as Bill K2UNK,
and not as any official NCI position simply because I sit on the NCI
board. If I go back to your Republican
example above, if I support abortion and I am an NCI
member, that anti-abortion folks should be worried about
NCI members having pro-abortion opinions? Of couse
NOT, because the issue is NOT on the NCI agenda.

> W5YI supports what to me seems to be a radical simplification and
> bastardization of the ARS requirements.

And W5YI is free to expound his opinions. Has he ever done so
and tried to claim NCI supported his viewpoints. Answer: NO.

> Hans has a plan that I generally don't like. I must say that he does
> address the issue of needed change when element one disappears.

And Han's proposal is neither supported or opposed by
NCI.

> So forgive me, but I think I can form an opinion and defend it.

Never said you aren't free to do so.

> All I propose is strengthening the requirements of what exists now, and
> otherwise leaving things intact. I would really encourage going into the
> regulations and cleaning them up after the changover.

What changeover?

> And yes, since NCI sees itself as the vanguard of change, I see NCI as
> derelict in it's duties.

Pretty amusing. "Derilict" as determined by what
yardstick?

> To just say "eliminate the Code test" really
> isn't enough.

You are entitled to your opinion and I suspect, because
of that opinion, NCI won't expect your membership application
in the near future :-)

Cheers and Merry Christmas to all.

The changes to FCC rules were included in NCI's petition.
It was really pretty simple stuff. No wholesale problems with
the changes.

Any and all "post" Element one changes I might support will
be done via ARRL. I have stated on many occasions
in the past that once code tetsing is gone, I see no further
need for NCI and will, as I have now, work via ARRL
for the "other stuff".

> If I had an organization that proposed the elimination of Element one,
> there is no doubt that I would have a whole set of proposals that I

Yet for all the discussion, debate and commentary to the FCC, the
FCC has not indicated any desire to replace code testing with
anything else.

> And that is the problem. There is no action without a reaction or
> consequences. Something like Morse code testing, which is interwoven
> into the fabric of the ARS as much as it is, cannot simply be yanked out
> without consequences.

I still don't see any undesired consequences.

Well, I'm sorry about it Bill, but that is how it works. Spoils of success.

In the world of politics, there is no such thing as a one issue
organization. When agitating for the addition or removal of something,
there must be some kind of plan for afterward. If there is no plan, then
one of two things happened. Either there was an immense amount of
naivety, or a concept of "no plan for the aftermath" was made".

I'm bothered by it now because I'm new to the ARS and didn't even know
about NCI in it's early years. I would have taken NCI members to task if

I was a ham then.

>>But it is a great way to dodge responsibility! 8^)
>
>
> Dodge responsibilities? So exactly what does that mean?
> What specific "responsibility" is NCI dodging?
> Did I miss some unstated responsibility of NCI and/or any
> other ham club or organization?

Yes you did miss it, IMO! What other Morse code pro/con advocacy groups are there? NCI is the one standing around when the change happened, it happened their way, and now all we hear is some people's personal beliefs when they should be at least putting together a plan for the aftermath of the ARS, post Element one. The two I have seen I'm not overwhelmed with.

So I will be yapping about what I percieve to be a *grave* error in omission.

Wow! I'll say! Kim, eat your heart out. Better still, stop eating that ice cream you spoke of in a later reply, go out and get some exercise, and maybe you can give Janet some competition someday. Keep it up the way you are, and you're heading toward adult-onset diabetes, possible kidney failure, and saying goodbye to your toes, feet, and legs in that order. I see the results of self-induced obesity every day -- I'm usually loading them into my bus, securing their wheelchairs, and hauling them off to dialysis treatments three times a week! The choice is up to you!

I'm assuming that's a recent photo of Janet. The detail page gives her birthdate as Feb. 1960, meaning she's pushing 44 years old! Can anyone place the vintage of the 'Vette she's leaning on?

Chuck:

I think you've got a good idea. Send it in to the FCC as a Petition for Rulemaking, then, if and when it comes out as an NPRM, I'll provide favorable comments in support of the new rule. Baxter is obviously driving a tractor-trailer rig thru a skateboard-sized loophole. Considering the fact that the majority of radio amateurs now get their amateur radio-related "news" via the internet, K1MAN can hardly justify his self-indulgent waste of spectrum. At the very least, he should be time-limited in the manner you suggest. I'd much prefer that he was simply given a Cease And Desist order from the FCC.

If other traffic behind her is attempting to go faster than she is, she
is blocking traffic unless she is passing traffic in the right lane.

That ONE car tries to force her to move over does not
> constitute impeding the flow of traffic as the blockhead that is trying to

>
> Dee D. Flint, N8UZE
>

Stop trying to make something complicated out of a simple Texas law. If
kim or anyone else is in the left lane, they are obligated to move to
the right for any faster traffic. The law plainly states that if you are
in the left lane and not passing other traffic you should be in the
right lane. As long as she is passing the other traffic in the right
lane, then being in the left lane is where she should be, but as soon as
she passes the traffic in the right lane she should move over to the
right to let faster traffic pass. What is so hard for you and kim to
understand about that?

I've read it, JJ. Instead, I suggest you read it again because you've misinterpreted what it says. Section 545.051(a) refers to driving on the opposite side of the highway - the side for traffic traveling in the opposite direction. Section 545.051(b) refers to driving in the right lane if moving slower than other traffic. But, again, absolutely nothing says the left lane is only for passing - nothing says a person can't drive in the left lane on a multiple-lane highway when not interfering with the flow of traffic.

It clearly doesn't say that, JJ. Instead, it says, "An operator of a vehicle on a roadway moving more slowly than the normal speed of other vehicles at the time and place under the existing conditions shall drive in the right-hand lane available for vehicles." In other words, the only time one must absolutely be in the right lane of a multiple-lane highway is when moving more slowly than other vehicles. This clearly supports the idea that one must move to the right to let others pass, but it doesn't support your premise that on must always drive in the right lane.

Yes it does, but we are talking about a multiple lane road which item
(b) deals with.

Section 545.051(b) refers to driving in the right lane
> if moving slower than other traffic. But, again, absolutely nothing says
> the left lane is only for passing - nothing says a person can't drive in the

If there are no other vehicles in the left lane then no, you do not have
to move to the right lane. But what started this argument is kimmygirl
saying that just because someone comes up behind her wanting to go
faster than she is dosen't mean she has to yield by moving to the right.

Here are her exact words from her posting of 12/2/03.

"It's fine for them to go 20 mph above the speed limit. It's fine if
they want to go 30-40 mph above the speed limit. But, they won't find
me moving out of their way; they'll have to go around because I am not
moving into a lane where I have to slow down, or even get "stuck" there
for a while, if there happens to be more than one vehicle that wants to
go past."

So her take is she has a perfect right to set in the left lane because
she dosen't have to yield to faster traffic. As long as she is passing
traffic to the right OK, but when she has passed the traffic to the

right she is obligated by the law to move to the right and yield to the faster traffic, even if she thinks they are speeding. If she is going as fast or slower than the traffic to the right then she is not passing and, as the law plainly states, she should move to the right lane to yield to any faster traffic. In plain words the law says, drive to the right and pass to the left and if you are in the left lane, yield to faster traffic by moving to the right. Very simple.

That may be what started this discussion, but I was responding to your comments posted 12/23/03 (6:08 PM), in which you said....

"Sounds pretty simple, the left lane
is for passing, you should always
keep to the right except for passing."

As noted above, nothing in Section 545.051 supports that position. A person can drive in the left lane, even without passing, as long as there is no interference with the flow of traffic.

Notice that the words "left" and "right" were corrected in the 12/23/03 quote to reflect your stated intent (you had reversed those two words in the original message, but corrected that in a follow-up message).

Merry Christmas, JJ. After posting this, I'm going to sit back and drink some hot chocolate while listening to some good Christmas music. After that, perhaps I'll go back to bed for a few hours (that bed was mighty warm and comfortable).

<mcoslo@adelphia.net> writes:

>The two I have seen I'm not
>overwhelmed with.

Was this one of the plans you saw?

1) Three classes of license: Basic, Intermediate, Full (change the
names if you don't like them - Third, Second, First, Novice,
General, Extra, whatever)

2) HF/MF bands split into subbands by mode and split again by
license class. Some bands (30 meters) may be split by mode only.
Bottom of each band is CW only, middle is CW/digital, top is
CW/phone/image. Percentage division about 20%/30%/50% (varies with
band). "Digital" includes digital voice modes if bandwidth under
1 kHz.

3) "Basic" license test is simple 20-25 question exam on regs,
procedures, and safety. Very little technical and RF exposure
stuff. Main objective is to keep Basics out of trouble. Basics
get 100-50 watts on HF/MF and 25 watts or so on VHF/UHF (power
level is below the point where RF exposure evaluation required).
Modes are CW, analog voice, PSK31, RTTY and many of the other
common data modes like packet. Basics cannot be VEs, control
ops for repeaters, or club trustees. Basics get most VHF/UHF
and about half of HF/MF spectrum, including parts of all
subbands-by-mode. Basic is meant as the entry level. Easy to
get, lots of privs, yet there's still a reason to upgrade.

4) "Intermediate" license test is more complex 50-60 question exam
on regs, procedures, safety and technical stuff. Intermediates
get 300-400 watts on all bands, all modes. Intermediates can be
VEs after qualification (see below), control ops for repeaters,
and club trustees. Intermediates get all VHF/UHF and about
three quarters (or more) of HF/MF spectrum. Intermediate requires
at least one year experience as a Basic.

5) "Full" license test is quite complex 100-120 question exam on
regs, procedures, safety and technical stuff. Mostly technical,
with some regs to cover expanded privs. Fulls get all
privileges, modes, bands, etc. except that Fulls can be VEs
only after qualification (see below). Full license requires
at least one year as an Intermediate.

6) All licenses are 10 year and fully renewable/modifiable. No age requirements or limits.

7) Basics have six-character calls, Intermediates have five- or six-character calls, and Fulls have four-, five-, or six-character calls. Nobody has to give up an existing callsign.

8) Separate 30-35 question test for VE qualification, open to Intermediates and Fulls, which allows them to be VEs. Existing VEs are grandfathered.

9) Existing Novices, Techs and Tech Pluses become Basics, existing Generals and Advanceds become Intermediates, and existing Extras become Fulls. Existing hams can continue to use their current privileges as long as they retain license documents showing their old license class. Existing Tech Pluses who can show proof of license before Mar 21, 1987 get Intermediates.

10) Change to new system is at least six months to one year after announcement to allow time for question pool reorganization and so existing hams can upgrade under present rules if they want.

11) Experience requirement is not waived for existing hams to upgrade, but their time in existing classes counts.

End result is a system that is easy to get into (Basic is envisioned as a 21st century version of the Novice) and has reasonable but meaningful steps to reach full privileges. Testing matches the privs granted. Power levels are set about one S-unit apart. Nobody loses any privileges. There are only three license classes and four written tests, so FCC doesn't have more work.

Example of new privileges:

80/75 meters
3500-3575 CW only
3575-3750 CW/data
3750-4000 CW/analog phone/image

Basic: 3525-3625 and 3900-4000
Intermediate: 3525-3750 and 3850-4000
Full: entire band

How's that?

The Novice license does indeed bestow lifetime credit but that is not the
same situation as a Tech who subsequent to the April 2000 passed element 1.
In the latter case, the credit is only good for 365 for the purposes of
upgrading as stated.

>yield to any faster traffic. In plain words the law says, drive to the
>right and pass to the left and if you are in the left lane, yield to
>faster traffic by moving to the right. Very simple.
>
Not exactly, but close. How about this:

"When there are multiple lanes for the same direction, slower traffic must keep
to the right unless an exception as listed below applies. 'Slower traffic'
refers to any vehicle that is impeding the flow of traffic behind it.

Exceptions:

- When a vehicle has to be in a certain lane(s) to exit, enter or turn.
- When a vehicle has to avoid certain lane(s) that require an exit or turn.
- When dividers, signs, road markings or other traffic control devices prohibit
changing lanes.

- In any emergency situation"

The above isn't from any traffic code, it's just my interpretation. But do you see any holes in it?

Reading all these posts has convinced me that intentionally blocking the left lane on a multilane divided highway just to avoid letting others pass (and having to slow down oneself) is a violation of the Texas laws as written - even if both the passer is speeding.

In fact, in the case Kim describes, I would not be surprised if the LEOs pulled over both cars and wrote multiple violations for speeding, impeding the flow of traffic and following too closely. And that's the short list.

So my advice remains: Move over and let the "idiot" go past.

--

Dwight has the right idea. Turkey's in the oven, fresh cup of tea is waiting for me. Perfect running weather this morning, I was out for 40 minutes.

Merry Christmas to all

Not in the Mid-Michigan area.....can't find any radio related magazine
anymore! (except for something like Popular Electronics)

Heard some vicious rumor about the anti-radio relay league pulling magazines
from "shelf sales" recently but I cannot confirm this.

You're both right, but there are even odder twists in Part 97.

Any expired license still in the grace period bestows the obvious element credits.

A Novice license expired beyond the grace period bestows Element 1

A Technician license expired beyond the grace period *and* issued before Feb 14, 1991 bestows Element 1 (but not Element 2!)

A Technician license expired beyond the grace period *and* issued before Mar 21, 1987 bestows Elements 1 and 3 (but not Element 2!)

Any commercial radiotelegraph license (issued by FCC, of course) current or expired less than 5 years bestows Element 1

No other credit for expired licenses.

Think of all the twists!

Suppose someone had a Tech Plus issued after Feb 14, 1991 but more than 12 years prior to today, and they did not renew it, and they bypassed the Novice back then. No credit. But if they'd gotten that same license before Feb 14, 1991, they'd have credit for Element 1. And if they'd gotten that same license before Mar 21, 1987, they'd have credit for Elements 1 and 3.

Or suppose someone got a Novice or Tech way back in 1951 (52 years ago) and never did anyting with it. The old license document would be good for Element 1 in both cases and also Element 3 in the Technician case. But someone who bypassed those licenses and went straight for General or above gets *no* credits at all.

Lots of other scenarios. A 1951 Tech whose let his/her license expire in 1956 needs only the old license document and Element 2 to get a General, but someone who went straight to Extra 12 years and 1 day ago and did not renew gets no credit at all.

It seems to me it would be a lot simpler to have the rules say that *any* class of code tested license or equivalent CSCE would grant Element 1 credit, but they don't. The written test situation is even odder, but it could be argued that the old writtens did not include RF exposure questions and the regs have changed quite a bit.

That would be true if they were selling only ONE copy of it, but when I COULD find a copy of it locally, due to the fact that it almost ALWAYS sold out each month, I inquired as to how many copies they got at the closest store. They said 15 per issue.

So your math would be in slight error. Multiply that number by 15 and you get $718.56. Not bad for only one magazine, and when you consider they usually have at least 100 or more magazines on their shelves.

se.

Cop out excuse. A person's beef would be with the ARRL, not the contracted agency, and it would be the ARRL's responsibility to deal with the contracted agency.

I was trying to avoid all the permutations of the current rules and just address the statements as presented. It does get quite complex as to what grants which credits.

Say Sir Putzii the First. He's said it over and over so it HAS to be
true, Jim. =)

Thank God yet another "holiday" is only 7 hours from being over. Maybe we
can get back to some semplence of sanity...But not until the "Day After" sakes
are over, I guess.....

It's only a "disincentive" to those who want something for nothing, Hans.

I'll bet you have a headache now, Jim! Its kind of like what I was
saying about actions and their consequences. Any time you change a rule
there are plenty of consequenses - like removing Element one without any
other changes. (which I think is impossible anyway, BTW)

Some brearucrat must have wrote those rules. And didn't understand that
a 13wpm or
20wpm code test would imply the ability to do 5wpm, and thus deserve
credit for element 1.
Said brearucrat was probably told to get the ham rules done this
afternoon, and get on
the new cell phone or whatever rules tommrow.

You really *are* ignoring pertinent facts to this discussion. I've said more than a couple/few times that if I come up behind someone who is going a slower speed than me, I simply maintain the distance between us at a slower speed. I leave in plenty of time to arrive at places I need to be; so I don't need to act like an idiot behind someone else...

Maybe you drive the way I am describing...huh? Is that why you are having such a problem? You're useless...never mind...

Oh, they do!! They do. And, you describe it correctly, Dee. I am with the
flow of traffic in the speeders lane--those of us who are already (usually)
well above the speed limit. Then, some bozo will come up from behind,
barreling faster than we are, and want every single one of us to move as
he/she proceeds forward. As I have observed most other drivers also feel
the same way I do--becuase few if any move. The faster speeder usually ends
up moving to the right when they get a break, zooms up and squeezes into a

space the length of a Volkswagon, with a dooly four-door pickup truck!!!

The really funny part is, when they get closer to town? We all catch up, usually toot and wave as we drive past because they've now gotten themselves stuck over in the right hand lane... I know, it's not nice to gloat... but it sure is satisfying!

Larry, just for once, would you stop thinking with your dick and show *some*
kind of intelligence? Why in Hell's bells would I be interested in giving
anyone "competition." Are you really that pathetic? Is it your game to
"keep up" with the Jones's or something? Maybe you're just that insecure in
life, that all that matters to you is how a woman looks. I am damned
beautiful, and I wouldn't give you the time of day if you had to adjust your
pacemaker to the next beat of the clock. Tell ya what...*you* go get this
person you are speaking of...lemmee see you *cough* just waltz up and sweep
'er off 'er feet, Larry. har dee har har Yeah, right.

Uh huh, and you are sadly mistaken to think that it is only weight that
determines things like that. By the way, seems the one time I looked at
your pic on QRZ, you didn't have much more room to swell your chipmunk
cheeks out any. And, the tee-shirt did no justice to hide your gut...
Maybe you better start *your* diet. Then, you can go find some gorgeous
babe you think you can get....

>

>

Not something you'll ever own...that's for sure. And, that's probably all that'll impress her. So, if that's the kind of woman you're turned on by, go for it Larry. Tell me when you find some dream babe to actually give you the time of day... In fact, tell me when you find any woman to actually give you anything....

Kim:

I've seen the photos of Janet, KK6NN, and I am not moving to California, so why should I have moved to Texas?

BTW, if you were to get rid of the ice cream, get on some good low-carb (not Atkins) diet, get some good exercise on a regular basis, you could be liberated from the size 20 slacks and be in a size 8 dress by this time next year. I'm sure you, your OM, your harmonics, and your 2nd harmonics would be a lot happier.

Merry Christmas to you and your family.

Carl (and everyone else reading):

May the warmth and joy of the season in which we celebrate the birth of our Lord and Savior, Jesus Christ, be with you and your family now and throughout the New Year! Merry Christmas!

To those of you who may not celebrate Christmas, I wish you the same warmth, joy, and whatever special fulfillment your particular holiday celebration may bring to you and your loved ones.

To all: Please celebrate safely and be here with us in the New Year!

WK3C was in Geneva for his work. His employer paid the way. No secret about that, he told us all about it here on rrap.

> It got redone. Reality. Love it or leave it.

"Administrations are free to impose morse code testing for all amateur licensees if they so wish, or partial morse code testing for privileges above 30 MHz. It is all up to each nation's administrations."

That's reality, Len, as stated by you.

> Some day I might hear W1AW out here 3000 or so miles away.

That would require a half-decent receiver and antenna, Len. Of course if you choose to live in the shadow of a mountain, refuse to build or buy suitable equipment, and refuse to inform yourself of when and where to listen, that's not my problem.

Have you ever actually listened for W1AW, on a time and frequency where there would be a reasonable chance of hearing it?

W1AW is about 200 miles northeast of here. I frequently contact west coast amateurs on 80 and 40 meters using my homebrew and kit stations, with antennas far inferior to W1AW's and much less power. If you can't receive W1AW where you are, the problem is obviously at your end.

What we call "a short circuit between the headphones" or "cockpit trouble" ;-)

> It doesn't reach Hawaii very well, or Alaska.

How do you know?

> Obviously us in the
> west don't exist as states of the Union.

More untruths. Gee, Len, you seem bent on spreading untruths and misinformation.

> Nobody can possibly be "interested in radio" without testing for
> morse code and then Acceptance of the True Way via ARRL.

Another falsehood from Len. Anyone can be "interested in radio". But being "interested in amateur radio" requires a license and active participation.

You're not interested, Len. You're not even interesting.

I wasn't there either, Phil, but I got basically the same message.

And its not a new message, either. Remember the Eye Bank Net?

> Perhaps - I hope - that was Bill's personal opinion and not "the
> official policy" of the FCC (we've differed on things before).
>
I hope so, too. But after all, we hams are a "legacy" service that doesn't provide much revenue, has huge pieces of spectrum set aside for it, and is quite anarchic in some ways (no channelization, licensees building their own equipment, etc.) Indeed, the very concept of "radio operator" is considered archaic in most services - or they are going in that direction.

> With the latest Bureau restructuring, he now reports through another

Not at all, Mike. I'm used to the rules having all sorts of twists like that. You should have seen what the FCC rules for the ARS looked like in the early '70s! Particularly to put a repeater on the air.

Didja know that there was a considerable period of time (started in the early 1950s) when, if a General or Advanced class ham could document heving held an amateur license before WW1 (USA entered WW1 in May 1917) the FCC would give you an Extra with no tests at all?

>Its kind of like what I was
>saying about actions and their consequences. Any time you change a rule
>there are plenty of consequenses - like removing Element one without any
>other changes. (which I think is impossible anyway, BTW)
>
Sure. It's called "The Law of Unexpected Results". Change something, and a other things will change, too.

For example, look at traffic light timing. It used to be the standard that when the yellow interval ended in one direction, the green for conflicting traffic would display right away. Traffic engineers noticed that sometimes accidents would result from drivers "crowding the yellow" too closely. ("It was orange, Officer!")

So they decided that there should be a 3 second interval of "all red" to give time for the intersection to clear.

But after a while they noted people entering intersections *against the red* (when the yellow interval had just ended) because they knew they had 3 seconds. Result: More accidents.

But it *is* possible for the FCC to just drop Element 1. K2UNK and I discussed this some time back right here on rrap and outlined the paragraphs in Part 97 that needed changing or deletion for that to happen. There weren't many!

FCC could make it even simpler, though. They could add the following to the rules:

"Pending further review and rules changes, Element 1 credit is given to any applicant for an amateur radio license of any class".

or

"Pending further review and rules changes, the requirement for Element 1 is waived for an amateur radio license of any class".

One sentence, no other changes until FCC gets the proverbial round tuit.

And if FCC were 100% convinced that code testing serves no purpose, it would have been dropped by now. Instead, it looks more and more like we're headed for another NPRM cycle.

Ah, yes, when they can't make a reasoned argument they trot out the old "something for nothing" mantra.

Sorry, but that just doesn't stand up in the light of day, Steve. My plan, for example, calls for an examination similar to the current Extra written for full privileges, yet avoids building a new set of Amateur Radio ghettos like Jim's 1968-leftover plan would do. It also avoids 'free upgrades' which we'll likely see proposed by a prominent CT radio club.

Don't worry, I did not take it as criticism. However, it reminds me that I need to get an updated rule book as they keep changing and mine is about one edition out of date. Of course I can always look things up on the internet but I prefer to have a book.

Green= go like crazy
Yellow= foot to the floor
Red= only 3 more cars through the intersection.

And some people blame the root of all this on the right turn on red rule.

Ummmm, well, yuh. You are right about that--I picked a *VANITY* callsign that has everything to do with *VANITY*. However, my tits aren't a distraction or obsession to me; they are a distraction to those who are too simple minded to get passed them and carry on with some resemblance of real dialogue--without the reference to tits all the time.

Try it, JJ, you may sound a lot more intelligent--but that's a stretch so don't be disappointed... 'Course, if you want to keep referring to my tits, I can keep referring to your dick...or lack thereof; you *are* demonstrating the characteristics of a man with a little dick, or who is short. There's absolutely nothing wrong with either, mind you, except usually in the man who holds either or both titles. Maybe some counseling would help you.

Yup. And tens of thousands of Americans are killed each year in accidents while doing same. At least as many are seriously injured, and the property damage is what - hundreds of millions?
>
>And we're afraid to let people run radios that are putting out the same
>power as the microwave oven over my stove?
>
Sure - because the microwave oven contains the energy. The antenna connected to the radio radiates it.

>these same people.

Note that when it comes to actually building and using functioning rigs on their own time and with their own resources, the self-proclaimed "RF professionals" are very quiet here.

> I do not know one technician that has done as much as build his or her
>own antenna. Well wait, I built a 1/4 wave ground plane for 2 meters
>when I was a Tech. But that's it.

I know a few. But by and large the serious tinkering is done by hams who at least know the code.
>
> Based on that admittidly small sample, I would have to say that we are
>putting out less tinkers per unit time, and almost certainly less per
>hamcapita. (Hans, that means tinkerers per total numbe of Hams. 8^))
>
Maybe. Actually I think license class and structure have little to do with it.

Much more important are factors such as what new hams see in other hams' shacks and in the amateur literature.

Look through old ham magazines - QST, CQ, the now-defunct 73 and ham radio. The older mags had lots of "build me!" articles for actual *rigs*, not just gadgets. By that I mean actual receivers, transmitters, transceivers, and power amplifiers, that a ham could build in the attic/basement workshop and put on the air. There was no shortage of gadget and antenna articles, either, but the mags weren't limited to gadget/antenna articles. And the further back you go, the more of that sort of thing was in the magazines.

They weren't mostly simple 1- or 2-tube regens and MOPAs, either. Check out QST in the late 1950s-early 1960s and in the complex-receiver category alone there were (at least) the HBR-14, HBR-8/11, HBR-16, (and several variants thereof), the "HBR-453" by W2PPL (two versions based on the then-ubiquitous BC-453), DCS-500, PHJ-1, and the 23 tube triple-conversion sectionalized masterpiece by W2LYH. And that's just the ones I can recall without looking through the indices.

Look through today's mags and there ain't much in the "rig" category anymore. It's just *assumed* that hams aren't going to build much anymore.

Depends on the person. Took me 6 months of hard frustrating daily work,
a flunk, and another test to pass. Whereas to me there is no difference
between a question pool and a book containing the info that will be in a
test. Read it-got it.

For me, learning CW was more difficult than the Extra test. It was
harder than it would habe been to take the extra test and having to
answer every question in the pool, and some that weren't in the pool.

My point is that if Morse code comes easy, just be thankful and use it.
Don't fall into the common trap of thinking that everyone else
experiences things just like you do. For some people, it is *extremely*
difficult. With a slightly different outlook and personality, I could be

the ultimate poster child for the NCTA's. Well okay I would have to be a
little better looking too! 8^)

On a better note, My project to bootstrap myself into being able to
work Morse CW at a usable speed is starting to pay off. It has been a
very strange route I have taken, and if it finally works, I'll post the
method I used. Forewarned, it is pretty weird!

1. But we could surely get used to the idea

2. I bet a relatively uniformed person would be impressed by my argument.

3. When do you feel safer, operating QRO or driving on the interstate?

I know this would be a massive undertaking, but wouldn't it be a hoot
for some enterprising Amateur to come up with a project similar in
complexity to say the Elecraft radios? That's a lot to ask, but it would
be sooo cool.

> I haven't. I don't.

Actually, you're quite the fibber. You have said it, and more than
once.

> The only way to have an interest in radio is to get a ham license.

You can be interested in radio all you want without obtaining a ham
license. You can even be interested in *amateur* radio without
obtaining a ham license. That doesn't mean that you know much about it
or that your interest runs very deep. After all, you've declared a
decades-long interest in amateur radio and you've posted here for seven
years or so without acting on that "interest".

> To you it doesn't count at all that "interest in radio" can result in
> a half century of professional work...including design in radio.

I didn't write about "interest in radio". I wrote about "interest in
amateur radio". What counts is the convenience you find in leaving out
certain key words.

> To you it doesn't count that "interest in radio" AND electronics
> can lead to very enjoyable hobby activities in building, testing,
> designing new electronics things ('electronics' includes radio).

Wrong again. You can build, test, design or smash all the radio and
electronics items you like. That has nothing to do with the fact that

you've yet to act on your supposed interest in amateur radio.

> No, FIRST one "must" get an AMATEUR license according to
> Herr Robust.

Wrong, yet again, Doctor Evil. To join the fun in amateur radio, you've first got to obtain a license. You have to put your declared interest into motion. You have yet to do that.

> >You could say that you have an interest in gardening, but if your

What holy rules would those be? You seem to be an arrogant, officious type of guy. Are you one of those who dictate how you'll behave or are you somehow a slave of the N2EY profile, unable to resist the outline of your likely actions?

> >You could say that you have a great interest in flying an airplane, but

Oh, you're a fine, fine fellow to write of grace and gentle manner when
it comes to differences of opinion. When you're busy standing up to me,
do you think you'll ever get the spelling of "belligerent" or its
variants down pat?

> The FCC accepts ALL input on ALL radio services, Herr Robust.
> They don't need "licenses" in any radio service to accept comments.
> I know that is a very foreign thought to your proud, arrogant holiness,
> but that IS true.

Having the FCC accept your comments doesn't mean that you are a
participant in amateur radio. I've already acknowledged that you've
made comments to the Commission so the concept must not be at all
foreign to me. Get your facts straight.

> I'd like to see YOU address the FCC in the same manner as you
> address others. Good luck on that one now!

Why didn't you address the FCC in the same manner you've used here? Did
you call anyone "Colonel Klunk" or make any nifty S.S. references? Did
you include comments about "morsodism" or "the Church of St. Hiram"?
This looks like another "do as I say and not as I do" on your part.

Why would you comment about having had HF access several times in the
past half century to someone's post concerning Michael Jackson? That
wouldn't make sense.

> I thought it was all about national economy, presidential politics,
> the antics of State, and general subjects that must be dear to
> hamhearts everywhere that do NOT touch on amateur radio in
> all those other threads.

Why would you insert comments concerning having HF access several times
in the past half century to posts about the national economy,
presidential politics, the Department of State and such? That wouldn't
make sense.

> >Your HF access of the past isn't an issue this time around.
>
> Neither is the HF access I had from a Ventura marina a few
> months ago...again (for at least the 5th time) without requiring
> any amateur radio license or knowing morse code.

See, you're oscillator is drifting again. Your HF operation from a
marina had nothing to do with amateur radio, did it? Why did you think
those here would be interested? You seem to have a one-track mind.

> >> The discussion should be about the federal regulations for an amateur
> >> radio license regulation, not the individual "motivations" of any
> >> aspirant to an avocational radio activity.
> >
> >Maybe you feel that's what it should be about....but it isn't.
>
> It seems to be about ANYTHING EXCEPT amateur radio. It seems
> to be all about Kolonel Klunk wanting retribution for some imaginary
> wrongs done to his psyche in here.

It does? Do you mean those exchanges where you knew more about State
Department embassy communications operations, practices and objectives
than those who were actually employed to do the work? Do you mean your
antics regarding Key Officers Lists? You came off looking as silly in
those as you do in attempting to set the agenda for amateur radio ops.

> >> You constantly insist on personalizing everything about those who do

> your Lifestyle.

Yes, to me. That's because I am a licensed radio amateur. It is
obviously less than that to you. You aren't a licensed radio amateur.

> Ho hum.

You can feign boredom. If amateur radio bores you, why do you persist
in haunting a newsgroup which discusses amateur radio?

> >> Instead, you've turned it into a battleground of
> >> your own, arrogantly demanding adherence to your personal view-
> >> points.
> >

>
> Is it now a requirement to "have presence" on ham bands in order
> to even speak of amateur radio?

You've spoken of amateur radio here but you are unable to participate in
amateur radio. you said I've turned amateur radio into a battleground.
I haven't. You know nothing of what I do, have done or am likely to do
in, for or about amateur radio except for what you can glean here or
from a number of web pages.

> Is the FCC requiring all Wireless Bureau staffers to have amateur
> radio licenses in order to regulate U.S. amateur radio?

That matters not at all. You aren't one of them.

> >> You join several others in here in so doing, some past, some
> >> present. That's counter to the original purpose of "the service," isn't
> >> it? Or is it?

> >Are you confusing amateur radio with this newsgroup? Is it your opinion
> >that I'm required to quietly accept your guff?
>
> If I have to "accept" your guff, then you have to accept mine.

That is pretty evident. I'll continue to point out that you have no stake in amateur radio. You're a bystander.

> YOU deal with it. [in your own quaint SS manner, of course]

Well, Foghorn Lenhorn, it pains me to no end that you've again resorted to your usual tactics.

> >> Perhaps you embody modern amateur radio, a constant striving for

> >
> >Well, old chap, it looks as if you're wrong in your assumptions yet
> >again.
>
> No, old chop, I don't "assume" anything. I tell it like it is.

You'd first have to *know* how it is. You plainly don't know.

> You are
> just another arrogant control-freak wanting others to be subservient
> to your viewpoints. You can't accept a damn thing if it isn't in line
> with your holy opinions.

The statement above is more likely to be true of:

1) one who has been a licensed radio amateur for four decades, interested in the well-being of the service?

or

2) one who has never been a radio amateur but who claims that his ideas for amateur radio licensing are the right way?

> >It is a cinch that you don't embody any of amateur radio--past,
> >present or future.
>
> Absolutely TRUE. I've been a professional for over a half
> century.

Spiffy! Be as professional as you like. You're still on the outside of amateur radio.

> Herr Robust must think that professionals are not required to have
> any recreation. Is it that way in your SS?

Watch TV. Play Canasta. Listen to a scanner. Take a drive in the countryside. You professionals need all the recreation you can get.

> >of which you accuse others. You are--what is it you call

> >at ADA a half century ago.
>

> So...if the U.S. Army hasn't been using OOK CW on HF for six
> decades, that is "tiring?"

C-O-M-P-R-E-H-E-N-S-I-O-N. Noooooo, you tales of it are tiring. Your
belligerence toward radio amateurs is tiring.

> You must not be tired. You must be in coma. You are not
> conscious of anything that has happened in the last six decades.

Because I'm not up to date on what happened at ADA fifty years ago? I
can't quite remember the full six decades, Len. Then again, I'm not
quite 55.

> >> Enjoy your little clique of morse code uber alles in amateur radio

You'd likely receive a higher rate if you could spell.

> The age is 71, not 70.

Cheer up. You could still have a little time as a radio amateur if you
could just overcome that intertia.

> Too bad you'll never make that age...

Statistics say I'm likely to do so. Do you know more about me than you
do about amateur radio?

You've waffled on this issue for some time. In the past, you've held
that I am a god of amateur radio. In frequent reversals, you've stated
that I am not. I think I'll wait until the several of you inside the
Leonard Anderson cranium come to an agreement.

Amateur Radio Newsline™ Report 1376 - December 26, 2003

Amateur Radio Newsline report number 1376 with a release date of Friday, December 26, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A California city says NO to BPL, an earthquake hits the central California and Kids Day 2004 is just a week or so away. The details on Amateur Radio Newsline report number 1376 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: LOMPOC SAYS NO TO BPL

The City of Lompoc, California, has said NO to Broadband over Powerlines, and its a big win for ham radio. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been monitoring the situation and has the details:

--

Paul Andreasen, K1JAN, said it this way -- quote: "Well, we won ONE at least!"

What Andreasen is referring to was a plan by Lompoc city leaders to deploy Broadband over Powerlines in that city and the work of the ham community to head it off.

Andreasen is the ARRL Technical Coordinator for the Santa Barbara Section and a ARRL Technical Advisor for the League's Southwestern Division. And he was one of the organizers of the movement to stop the deployment of B-P-L in the Lompoc area.

In an e-mail, Andreasen says that his group sprang into action when they learned of plans to permit powerline broadband. He presented city leaders with several studies and some facts on interference effects to and from other licensed RF users.

--

Andreasen: "I know the mayor so I stopped in one day and asked him. He said yes they were and I introduced him to some of the facts of radiation not only causing problems with public communications, the CHP, Amateur Radio, etc., but about it also causing problems with the BPL system (itself).

--

Meantime, Eric Lemmon, WB6FLY, made the California Highway Patrol aware of their efforts. The statewide C-H-P radio system operates on low-band F-M which falls right smack in the middle of the spectrum used by B-P-L.

And then they wait until December 17th for the newspapers to report the results of their City Council vote on the matter. The good news: No Broadband Over Powerlines in Lompoc. Instead, the City Council approved a rival, non radiating system that uses fiber optic technology.

But that's not all. The company that did the study for the planners was told by the City Administrator not to entertain any radiating methodologies at all. All because ham radio operators spoke up and provided proof that B-P-L could be hazardous to the regions R-F environment.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Another quote from Paul Andreasen, K1JAN, kind of sums it up. "We not only win one, but a bureaucracy kept it's word!" (K1JAN, W6YN)

**

RESCUE RADIO: THE CENTRAL CALIFORNIA QUAKE

Meantime, about 90 miles North of Lompoc an earthquake measuring 6 point 5 on the Richter scale struck at 11:15 a.m. on Monday December 22nd. Centered not far from the famed Hearst Castle tourist attraction at San Simmeon. Ham radio was quick to respond as we hear in this report:

--

K6YR: "Various parts of the livingroom looked like the U.S. Army had gone through a Fedeey'n safe house. Just glass and food stuffs all over the place. It was pretty scary."

--
That's Rob Griffin, K6YR, the Section Manager for the area where the quake hit. He was describing what his own home looked like after the magnitude 6.5 temblor hit. But Griffin would have to put off clean-up chores because there was other work that needed to be done:

--

K6YR: By noon the San Luis Obispo Emergency Operations Center had called out the ARES and RACES operators, primarily supporting the Red Cross in opening shelters in Paso Robles and Oceana. Morrow Bay also had Red Cross shelters and we provided communications for the Red Cross because their cell phones just weren't functioning for the first 12 hours after the earthquake.

--

According to Griffin with cellphones down, another way to communicate was needed by emergency workers. Enter ham radio volunteers.

--

K6YR: "We had some come from as far as South county which includes Oceana, Nipomo, maybe even some from Santa Maria to help support the North county Paso Robles ARES area."
--

The city of Paso Robles was hardest hit. Part of the historic downtown area was destroyed and two people were killed. Griffin says that hams were on scene providing communications for about 24 hours. When we spoke to K6YR some were still there:

--

K6YR: " There are some Amateur operators still manning the county Emergency Operations Center. but my understanding is that the communications and support up at the Paso Robles Police Department has closed down for the timer being and it appears that the Red Cross has its communications which relies on cell phones back in operation."

--

The bottom line. It took the cellular providers about 12 hours to get service back to most of the stricken area. Meantime ham radio operators were there, doing what they do best.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, reporting.

--

According to Cal Tech, Monday's temblor was the state's first deadly earthquake since the magnitude 6.7 shaker that hit Northridge California in 1994. (ARNewsline(tm))

**

RESTRUCTURING: VK TO GET REVISED AMATEUR RADIO SERVICE

Hams in Australia will soon have a restructured Amateur Radio Service. Some of the changes are coming soon Others are still being negotiated. Q-News Graham Kemp, VK4BB, is here with the details:

--

As reported, the Australian Communications Authority has decided to discontinue the Morse code proficiency requirement for the amateur service. The ACA will also remove the prohibition of third party communications to an amateur station in another country. If another country seeks a prohibition on such communications, this will be published and conveyed to the amateurs. To effect this decision, the ACA will need to amend the Radiocommunications Licence Conditions Determination No. 1 of 1997. Thats the Amateur LCD.

The ACA will directly inform the amateur community through established communication channels when the amendment has been made. The ACA will update the Amateur Internet Linking System consumer fact sheet to

incorporate changes to third party communication arrangements.

The ACA will continue to impose limits on the purity and stability of emitted frequencies, and maximum power limits on amateur stations in accordance with the ITU's requirements for transmitting stations. The ITU requirements will be incorporated into the ACA's public information doments in early 2004 to ensure that they are available to amateur licensees.

The ACA will maintain current requirements for use of a callsign while operating an amateur station, as contained in sections 8, 37 and 44 of the Amateur LCD. The ACA is still considering whether to permit the abbreviation of callsigns during emergency services operations and training. A decision will be announced by mid-2004.

The ACA will proceed with the proposal for Australia to participate in European Conference of Postal and Telecommunications Administrations - CEPT. While liaison with CEPT about T/R 61-01 can commence immediately, the licensing arrangements necessary to implement this will not begin until mid-2004.

The ACA is working through submissions about the remaining proposals, including the licensing structure, and expects to announce decisions by mid 2004.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of Q-News Australia.

--

Obviously for hams down-under, this is the start of something big. (Q-News)

**

Break 1

News never takes a holiday and neither do we. From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K-9-K-E repeater serving Godfrey Illinois.

(5 sec pause here)

**

HAM RADIO EVENTS: KID'S DAY IS SUNDAY JANUARY 4

Its one of the two most important ham radio holidays of the ham radio year and its only about a week away. Of coarse we are talking about the first of two Kids Day operating events for 2004.

According to a recent ARRL Letter, the first Kid's Day of 2004 will occur on a Sunday. Next Sunday, January the 4th. And unlike most other on-the-air events, Kid's Day is not a contest. Rather its a time when

experienced hams open their hearts and their stations to invite kids in and put them on the air to experience the magic that is ham radio.

Kid's Day will run from 1800 to 2400 UTC, and there's no limit on operating time. The suggested exchange is a youngsters name, age, location and favorite color. Most operation will be found on 14.270 to 14.300, 21.380 to 21.400 and 28.350 to 28.400 MHz and local 2 meter repeaters.

Guidelines for Kids Day are available at www.arrl.org/FandES/ead/kd-rules.htm. And -- oh yes: If you miss this Kids Day operating event the next one won't take place until Saturday, June 19th. (ARRL)

**

HAM RADIO EDUCATION: IARU CONGRATULATES NEW HAMS

A top IARU official has welcomed Albania's newly licensed hams to the hobby. Bill Pasternak, WA6ITF, is here with more:

--

Ole Garpestadt, LA2RR, is IARU Region 1 Chairman. And while participating in the recent graduation ceremony for Project Goodwill Albania 2003, he took the time to congratulate the new Albanian licensees, and welcomed them to the bands.

Garpestadt credited the University of Triana and the program organizers with their success in conducting the training and succeeding in something that the IARU itself has had only limited results with. It should be noted that LA2RR participated in final negotiations with Albanian authorities for their entry to CEPT and bringing the Albanian licensing regime into line with the rest of the CEPT world.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

One final note on Project Goodwill Albania 2003. Its organizer, the famed D-Xer Martti Laine, O-H-2-B-H, was awarded a "Senior Fellow of Polytechnic University of Tirana" at the graduation ceremony. In his closing remarks Liane thanked everyone involved for what he termed as their five weeks of serious effort. (Via press release)

**

HAM RADIO EDUCATION: 2004 - 2005 FAR SCHOLARSHIPS OPEN

Meanwhile, here in the United States, it's ham radio scholarship time again. This, with word that Foundation for Amateur Radio is providing applications for hams to apply for the 59 awards that it will administer for the 2004 through 2005 academic.

Right now, the foundation is inviting Amateur Radio licensees planning to pursue a full-time course of study beyond high school, and who are

either enrolled in or accepted for enrollment at an accredited university, college or technical school to compete for these scholarships. Awards range from $500 to $2500 with preference in some cases going to residents of specific geographic area or to those pursuing certain study programs.

The cutoff date is April 30, 2004. Application forms are available by mailing a request to FAR Scholarships, P.O. Box 831 Riverdale, Maryland. The Zipcode is 20738. (Foundation for Amateur Radio)

**

ELECTRONIC ASSISTANCE: REPAIRCLINIC.COM

A new Web site has been created to usher Americans away from their throwaway habits and into the world of yesteryear when we just kept it working.

Called RepairClinic.com, the cyberspac port provides aids for those looking to repair anything from a refrigerator or air conditioner to more complex devices such as microwave ovens. The site appears to derive most of its income by selling spare parts and factory manuals.

At the moment the site sticks to typical kitchen appliances. It does not provide advice on such items as radios, T-V sets, VCRs and other consumer electronics. At least, not yet. (Science Today)

**

RESCUE RADIO: THE LATEST TOWER TO COLLAPSE IS....

A 528 foot tower supporting antennas for WMGX and WYNZ in the Portland, Maine area collapsed on Thursday, December 11th. As reported on Scott Fybush's web site, the reason for the tower falling appears to be a guy wire that apparently snapped. The story, and a photo of the tower prior to collapse, can be seen at www.fybush.com/nerw.html Its not known if any ham radio repeaters shared this support structure. (CGC)

**

NAMES IN THE NEWS: VE1MR NAMED RAC RADIO AMATEUR OF 2003

Bill Elliott, VE1MR, has been named to receive the RAC Radio Amateur of the Year Award for 2003. Currently President of Halifax Amateur Radio Club, Elliott has been a Radio Amateur and a member of Radio Amateurs of Canada and its predecessor national organizations for over twenty years. Through that time, VE1MR has consistently and generously donated his technical and organizational skills to significantly promoting excellence in Amateur Radio and facilitating its public service role.

For a complete story on VE1MR's activities and the contributions which qualified him for this prestigious award, see http://www.rac.ca/new/canada.htm (RAC)

NAMES IN THE NEWS: JENNICAM GOING QRT

And, by the time you read this, Jennifer Ringley will have taken her famed jennicam.org webcam off the Internet and Q-R-T. This, after 7 years of her permitting the world to watch her life through a cyberspace eye.

Ringley was 20 and a student at a Pennsylvania college when she installed a web camera in her room and launched jennicam.org. That was in April of 1996 and over the years the cameras have followed her every movement 24 hours a day.

A self-described former computer geek who now lives in Northern California, Ringley has posted that her web cam was intended to be a fun way for her mom or friends to keep tabs on her. Also, that it was an interesting use for the digital camera that she bought on a whim in the bookstore.

Now, the site has a notice saying it will be closing on December 31st. No reason is given and Ringley has not respond to e-mail query's from the press. (Published news reports)

BREAK 2

Bringing you communications news 52 weeks a year. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NEWSLINE NEWS: MORE THANK YOU'S WITH N6TCQ

Ladies and gentlemen, we end this year and begin the next by saying thank you to more listeners who kept the Amateur Radio Newsline on the air throughout 2003. Here's Andy Jarema, N6TCQ:

--
This week we have the second half of our list of people who helped us financially in the month of April:

Linda Reeder of Salt Lake City, Vic Hartpence, W7RKU of Sparks, NV, The Puget Amateur Radio Society of Kirkland, WA, The Quarter Century Wireless Association of Eugene, OR'. Bill Alexander, KR6G of Quincy, CA, Leo Halog, KR6EG of San Fransisco, Mark Lunge and the MSARC N6MPX Repeater System, San Leandro, Monthly contributor William Walters, WA2IBM, of San Jose, Monthly contributor Scott Hensley of the Area Communications Team, San Jose
SCATS, the Southern California Amateur Transmitting Society, in West Covina, Our good friend Dave Bell, W6AQ of Hollywood, And Newsline Staff volunteers who paid out-of-pocket to keep Newsline on the air.

Thank you to everyone. Your April response to our crisis was exceptional, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. I'm Andy Jarema,
N6TCQ.

--

More from Andy in future Amateur Radio Newsline reports. (ARNewsline(tm))

HAM RADIO AND SPACE: THE MARS EXPRESS

An amazing space DX record for ham radio. This as Charlie Suckling, G3WDG reports that he has successfully received the 'Mars Express' deep-space probe using his 3 meter dish antenna.

Mars Express has been on its way to the red planet since the 2nd of June and was scheduled to arrive on Christmas Day. The signal was earlier received on 8.4 GHz by James Miller, G-3-R-U-H, at the AMSAT D-L ground station in Bochum, Germany. This, when the probe was 107 million kilometers away on November 16th.

Although traveling at the speed of light, the signal took about six minutes to reach earth. The AMSAT D-L website has information on how amateurs can receive Mars Express.

The AMSAT-DL website at www.amsat-dl/pa5/reception_g3ruh.htm provides information on how amateurs can receive Mars Express. (GB2RS)

**

HAM RADIO IN SPACE: PC SAT UPDATE

AMSAT North America reports that P-C sat is doing fine and will continue in good sunlight through New Years Eve. The satellite is seeing about 50 packet users per day and 30 per pass over the USA.

Anyone with a 2 meter transceiver and T-N-C can easily copy this bird. Just tune the radio to 145.825 and watch for 1200 baud normal AX.25 packet. (AMSAT)

**

INTERNATIONAL-SWEDEN: NO CODE ON JANUARY 1?

GB2RS reports that Sweden is likely to permit former CEPT Class 2 amateurs access to the High Frequency bands from the 1st of January. SM0SMK, the President of Swedish national amateur radio society has said that they hope the Morse code test requirement will be removed at the turn of the year.b (RSGB)

**

INTERNATIONAL - UK: NEW TRAINING PRESENTATIONS ON THE WEB

The Chelmsford Amateur Radio Society in Essex England has made all of its Powerpoint slide presentations for the United Kingdom's Foundation and Intermediate courses available on the web. Those who are interested in seeing what's involved in getting these new U-K licenses can download the slides from www.qsl.net/g0mwt (M5AKA)

**

DX

In DX, the FMRE Sunday bulletin has announced that the X-F4 DXpedition to Socorro Island will begin March 3rd, and run for two weeks. The call sign to be used is X-F-4-I-H. 8 operators from Mexico will be active all bands and modes including VHF, UHF and satellite. No QSL information is available at this time. (XE1KK, N4GN)

And S57CQ expects to be in Bhutan by the time you hear this newscast. He plans to spend as much of his spare time as possible active as A52Q. QSL as directed on the air. (RSGB)

Lastly PA4WM will be in Turkey for six months, on a four week rotation schedule. He operates SSB, CW and RTTY as TA1/PA4WM with 100 watts into a G5RV. He plans to upgrade his antennas with a vertical and receiving antenna for 160 and 80 meters at the earliest available time. (GB2RS)

**

THAT FINAL ITEM: HEAVY METAL ON THE HAM BANDS

And finally this week, Heavy metal is back on the ham bands. No, not the rock music kind. We are talking heavy metal as in vintage AM gear. Paul Goodman, K2ORC, has more in this report filed over the air - using AM :

--

Sunset on December 27, 2003 will mark the kickoff of this year's Heavy Metal Rally. A showcase for AM transmitters that weigh at least 250 pounds and produce 250 watts or
more, the annual event is sponsored by Electric Radio magazine.

The Rally has become a coast to coast highlight for many AM amateur stations in North America with activity on 160, 75 and 40 meters. The event goes all night, ending at sunrise on December 28

Participants who want to compete for the top place trophy submit logs to the event coordinator. Scoring for the Heavy Metal Rally utilizes a point system that takes into account, among other things, total number of contacts and the number of states and bands worked. In a departure from traditional contest-type scoring, a station can receive an extra point for each positive signal or audio report received by the event coordinator from other hams and SWLs.

Scoring notwithstanding, many AM fans participate in the Heavy Metal Rally simply for the pleasure of talking and listening to other AM stations with strong signals and outstanding audio.

Winter HF operating conditions generally lead to numerous coast to coast contacts featuring a diversity of transmitters. It would not be unusual for listeners to hear, an amateur in Colorado on a restored Gates broadcast transmitter chatting with someone in California running a Collins broadcast transmitter.

--
Contact Audio
--

While broadcast transmitters may be the first thing to come to mind when picturing equipment that meets the Heavy Metal weight and power criteria, the Rally also features a sizeable number of homebrew and military rigs. For more information on the 2003 Heavy Metal Rally, including the email address for log submissions and a list of suggested operating frequencies, please visit amfone.net -- that's alpha-mike-foxtrot-oscar-november-echo - dot - net.

Reporting for the Amateur Radio Newsline, this is Paul Goodman, K2ORC.

--

Sounds great, doesn't it! You can hear more for yourself on Saturday evening December 27th overnight into Sunday the 28th on 160 and 75 meters. Its the 2003 Heavy Metal Rally on your radio to enjoy. (ARNewsline(tm))

**

NEWSCAST CLOSE

For this week and this year, that's all from the Amateur Radio Newsline. Our thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News for their assistance in producing this weeks report.

A reminder that our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, Happy New Year and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003 and 2004. All rights are reserved.

You certainly seem to be enamored with a certain part of my anatomy. At
least I didn't pick a tasteless callsign like W5DIK, I have more taste,
commone sense and class than that, something you obviously lack to a
great degree. You must be pretty simple minded yourself as your
tasteless callsign is a reference to and a reminder to everyone of your
tits every time you post.
You demonstrate the characteristics of a woman who must call attention
to herself constantly, probably short and dumpy. You would be a real hit
with the cb crowd.

How about simply doing what the law requires? I wait for the school bus to turn off the lights and I only go the safe speed (15 max) in a school zone. I lose a few seconds here and there - big deal.

>> Or how about the ham who *feels* he "needs" 10 kW output? Suppose said ham

The problem is that if you do the highway vigilante thing you may be the victim of someone else's childish impulses. Or mistake. How many people died on Texas highways last year?

Please don't be a statistic.

>> and try it themselves.
>
> So you are saying that in order to show the idiot where the bear went
>in the buckwheat that you have to act like the idiot?

No, just the opposite. Kim is making sure that "acting like an idiot" doesn't
get the "idiot" what he-she wants (to pass and go faster).
>
>Agressive drivers are known to do some pretty insane things. Even if
>that piece of incorrect logic would be correct, the aggressive driver
>may be "provoked" (in his or her mind) to get even with the person ahead
>of him in the lane by doing something like a high speed rear-ending.

Agreed! Or, more likely, an accident could result that is much more severe
because of the behavior of both Kim and the "idiot". For example, if someone
cut in front of Kim and she had to hit the brakes, a rearender is almost
guaranteed.
>
>"Rewarding" or "teaching a lesson" or "showing them" or whatever doesn't
>work.

Sure it does. The question is whether it's legal and/or justified at 70+ mph in the left lane. You, Dwight and JJ have convinced me that it's neither legal nor justified.
>
> No thanks, if someone is going to be an idiot on the road, they can do

Point is, FCC spent years developing the new structure, announced it on 1951, but then just when the tough part of the new rules (requiring an Extra for amateur HF phone on 80 thru 15), they dumped those rules and gave everybody except Novices and Techs everything.

>

>There was no 'QRZ.COM' to go check, the CallBook didn't show license class,
>and all you could tell by their call sign was where their station was
>located. We all played together in the ether as equals.

Except for Novices, whose distinctive callsigns were unmistakeable.

Except for Techs.who had no HF at all and originally no 6 or 2 meters either.

And the alphabetic order of license told who was an OT and who was a newbie. W3ABC was an OT compared to W3YIK. W3YIK was an OT compared to K3NYT. K3NYT was an OT compared to WA3IYC. Etc. Usually, anyway.

If everything was so nice, why was FCC so unhappy with the way things were going? As early as 1958, FCC wanted to know why there were so few Extras. They asked again in 1963 and made it clear they wanted to bigtime changes.

Personally, I think it was "Sputnik fever". They, like many others in the USA, were spooked by the early Soviet achievements in space (first artificial satellite, first animal in space, first pictures of the far side of the moon, first man in space, first woman in space.....the list goes on and on) and perceived the USA to need "incentive" in all things technological.

My call was a re-issue, I received a K prefix call while my friends who
received calls about the same time got WA and WB prefix calls. One had
received his WA call sometime before I got the K call.

Not necessarily. Since we all got a new call sign everytime we moved, we might trade an 'old' call in Minnesota (W0ABC) for a 'new' call in Virginia (WA4ABC). Not only couldn't you tell how long we'd been licensed, but you couldn't tell our license class (except for Novices with KN, WN, or WV prefixes). My mentor, W0VDI, was licensed at a Tech in 1952 and went SK 50 years later with the same call and the same Tech license.

> If everything was so nice, why was FCC so unhappy with the way things were
> going?

It wasn't the FCC who was unhappy. The unhappy folks were a few resentful and vocal OT's who felt disenfranchised because a nubby new guy could operate phone on 20M, not having first passed the old class A exam like he had to. The march to disincentive licensing moved to the beat of drum being banged up in West Hartford, CT. I know it's hard for you to accept that, given that history is written by the victors.

I agree with Jim on the "Sputnick fever" reaction. My Earth Science
teached just about went off his rocker when Sputnick went up.

Cheers,
Bill K2UNK

And even while some folks were getting K2 calls, the FCC would
occasionally issue someone a W2 call that had gone unassigned for
some time period.

Cheers,
Bill K2UNK

I doubt anyone could convince you, but...

The publication of actual homebrew equipment in today's ham mags may just get some folks to actually start tinkering. The fact that a 21st century had restored *and used* a ~50 year old homebrew rig says that it's not just something hams used to do years and years ago.

The technology isn't nearly so important as the mindset that homebrewing is a viable alternative.

And if the signal is up to modern requirements and the ham has fun, what's the problem?

Couple months back there was a homebrew 17 meter DSB transceiver article in QST. Not exactly bleeding edge technology but it worked and the ham learned things and had a ton of fun. So it ain't just vintage stuff in QST.

Absolutely!

The reverse is also true. Look at the opposition to cell towers.

> 3. When do you feel safer, operating QRO or driving on the interstate?

Fact is, if you drive to the airport, fly in commerical airliners all over the
USA and return to the same airport and drive home, your greatest risk was in
the rides to and from the airport.

Same sort of thing around here. In fact, until recently there was a 1x2 in the third call district with a Tech license.
>
>> If everything was so nice, why was FCC so unhappy with the way things were

Then why did they start the ball rolling with all the changes, both in 1951 and 1958/63?

>The unhappy folks were a few resentful
>and vocal OT's who felt disenfranchised because a nubby new guy could
>operate phone on 20M, not having first passed the old class A exam like he
>had to.

You mean like W2OY of "no kids no lids no space cadets" fame?

Note also that FCC had upped the ante in the 1951 restructuring. After the end of 1952 they would no longer issue Advanceds, so anybody who didn't have an

Advanced by that date would have had to get an Extra just to work HF phone on 80 thru 15. Then, just before Christmas 1952, FCC completely reversed itself and gave all hams except Novices and Techs full operating privileges. Why the sudden about-face? Nobody seems to know, and the literature of that era only briefly mentions the change.

>The march to disincentive licensing moved to the beat of drum being
>banged up in West Hartford, CT.

And a majority of members wanted it. A very slim majority, to be sure.

>I know it's hard for you to accept that,
>given that history is written by the victors.

And your source for this is?

I know you were a ham then, Hans, but where does this info come from? Or is it just an opinion?

The "plan" is simple. There is NO need to replace code testing
with anything else. That is and always has been the NCI objective.
Anyone (NCI member or otherwise) that wants to pursue
other test changes (written made harder, easier, entrylevel,
etc..) are free to pursue such aims independent of the NCI
banner. As Jim (N2EY) can attest to, I have made several
suggestions on imprving testing to the VEC, but that was and
still is seperate from the NCI "plan."

> I'm bothered by it now because I'm new to the ARS and didn't even know

And what a short-lived phenom that was! Now at the university level at
least, the Techies and Engineers to a large extent are not from the US,
while our kids are busy getting MBA's and becoming lawyers!

A person can learn a lot MORE from the older technology. It is a lot
closer to the theory by virtue of simplicity.

What would do a better job of teaching a newbie about antenna matching,
a simple L or T network tuner, or an LDG tuner?

What would teach a newbie the technical ins and outs of transcievers, a
rock mite or a FT1000MP-Mark V? Or to keep within the bet, that wooden
chassis three tube thing.

And the newbies of today may become the bloody edge pro's of tomorrow.

Hear Hear! There is not thing one wrong with old technology, and the
pursuit of that part of the hobby is every bit as valid as the latest
gee whiz techno-marvel.

Too many people seem to think that a ham can only enjoy one facet of
the hobby, it would seem. I like and use the latest technology, but I
just love the old stuff too.

> Couple months back there was a homebrew 17 meter DSB transceiver article in

I'm homebrewing a high power tuner right now that will double as a
piece of art. Bleeding edge technology? Heck no! if other hams don't
like it, thay can just ignore my CQ!!

>determines things like that.

Don't look now, Kim, but obesity is a major risk factor in adult-onset
diabetes,
particularly among women. And if you're more than 30 lbs. overweight, based
on your height, you're obese.

>By the way, seems the one time I looked at
>your pic on QRZ, you didn't have much more room to swell your chipmunk
>cheeks out any.

At the time that photo was taken (around 1997) I was around 188 lbs. I am
now ten pounds lighter. I have not been clinically obese ever in my life, and
my weight for my height (just about a millimeter less than 6 ft.) is within the
normal, healthy range for my age (51).

>And, the tee-shirt did no justice to hide your gut...

I *never* wear tee-shirts in public, Kim. I am looking at that photo, and I am
wearing a pullover golf shirt. Also, the photo only shows me from the collar
up, my "gut" doesn't show at all. However, if you like, I could E-mail you a
more recent head-to-toe photo, which will reveal the fact that I have no "gut"
worth hiding.

>Maybe you better start *your* diet. Then, you can go find some gorgeous
>babe you think you can get....

I am on a permanent diet, which means I almost never indulge in empty-
calorie, high-carbohydrate foods. I had Christmas dinner with friends tonight,
and it was virtually the first time this year I'd eaten anything which could be
categorized as "dessert." I live on a very plain diet of chicken, fish
(usually
salmon), beans (usually lima beans, never the sugary, fatty "baked beans"
fat people eat), veggies and fruits. I eat virtually no potatoes, and only
an occasional (meaning not even once weekly) small portion of rice. I never
eat ice cream at all. I haven't had any in almost 10 years. I have made a
lifetime commitment to keeping myself healthy, which, in turn, keeps me
from looking like the usual fat slob you're used to seeing. I don't know
whose photo you were looking at, but it apparently wasn't mine!

>> I'm assuming that's a recent photo of Janet. The detail page gives her
>> birthdate as Feb. 1960, meaning she's pushing 44 years old! Can anyone
>> place the vintage of the 'Vette she's leaning on?
>>
>> 73 de Larry, K3LT

>Not something you'll ever own...that's for sure.

If you're speaking about the 'Vette, you're probably right. I can certainly afford one, but I simply have no use for an inefficient, highly impractical automobile such as a Corvette. My own car is a 2003 Toyota Corolla LE. It gets outstanding fuel economy, and is capable of taking me anywhere I can go in a Corvette, without the punishing ride, speeding tickets, and lack of useful luggage space. Moreover, if I lived in a place where I could legally drive a high-performance sports car the way it is capable of being driven, I wouldn't have a Corvette -- I'd have an Accura RSX. I only drive about 10K miles a year in my personal car, so my Corolla serves my purposes nicely.

>And, that's probably all that'll impress her.

If I felt that I needed a Corvette to impress any particular woman, then I probably wouldn't have much interest in that woman in the first place. It would be highly unlikely that we had anything meaningful in common.

>So, if that's the kind of woman you're turned on by, go for it Larry.

Actually, I'm "turned on" by women who are friendly, pleasant, easy-going, secure in their femininity, appreciative of an intelligent and caring male partner, and don't have any liberal feminist axe to grind. Trust me, you wouldn't know anything about someone like her.

>Tell me when you find some dream babe to actually give you
>the time of day... In fact, tell me when you find any woman to actually
>give you anything....

I have just described her, but that's not the subject here, Kim -- you are. I made some observations which showed well-intended concern for your well being, and all you could think of as a reply was another of your tedious personal attacks. Quite frankly, I don't know why I bothered, other than the fact that I care about people, and that, for some odd reason, includes you.

Kim:

I don't think you could Goggle-up any instance where I made the claim that "anorexic looking" is beautiful. On the contrary, I happen to be attracted to women who are "full figured." However, this doesn't mean "fat." It means weight proportional to height, with proper muscle tone and all the curves in place and well defined. Most women, including yourself by your own admission, have these characteristics when they are in their late teens and twenties. It is usually after they marry, and no longer feel that there is any need to keep themselves attractive to the opposite sex that they "let themselves
go," and binge on the ice cream, chocolate, and other empty calories. Then, after having had a few children, they usually experience a permanent weight gain, and, in the absence of any serious exercise regimen, and the continuance of the poor eating habits, they run into a series of physical problems associated with carrying around up to twice their normal weight. The truly unlucky ones then go on to adult-onset (Type II) diabetes. The sad part is, all this misery can be easily avoided by simply following the basic rules of healthy living: Don't eat more than you need, avoid refined sugars in all their forms (our bodies were never meant to process the vast quantities of sugar we now consume), be moderate in your consumption of alcohol (which is also mostly sugar), and get regular exercise -- walking preferred.

> I am quite liberated and am quite beautiful

Forgive me for pointing this out, but that is strictly a self-serving observation.

>and my
>husband, leave the "OM" title to you, are about as happy as can be. See?

I'm so happy for you.

> ...is simply this:
>
> Know code = Know ham
> No code = No ham
>
> The eternal truth, proven every day.

I have a feeling that this issue about the code will never be resolved, at least not while the "old guard" of CW loyalists are still around. I've been a ham since I got my Novice ticket in 1986 -- before the Novice Enhancement started -- so I did my 5wpm test back then. Unfortunately, I've not had the need to use it much. At one point, I felt as you do, that Morse skills were necessary in order to be qualified to operate HF. However, technology has pretty much removed Morse skills from the list of skills needed to operate properly in the Amateur Service.

I do intend to refresh my Morse skills and operate more using that mode, especially since I am doing more operating while camping and traveling, plus operating at QRP power levels from home and on the road. That's a matter of personal choice, though. I also plan to get onto PSK31, RTTY and even SSTV and ATV as opportunities present themselves. But as things stand now, the ability to operate CW is no longer a necessity. It's still a valid mode, CW sub-bands should still be set aside for operating in that mode, and it's still a skill that should be cultivated among the Amateur ranks, but it has outlived its usefulness as a requirement and should be eliminated as such.

Morse skills were once considered to be a "filter" by which those operators who were going to screw around on the air would be eliminated -- the theory was that if someone was a goof-off, (s)he would be deterred from getting a ham license by having to study for the Morse exam. As I've stated elsewhere, that theory has been disproven by the antics of licensed Amateur operators in places like 14.313 MHz, the "Animal House" repeater in Los Angeles, and the jammers that disrupt communications during the Rose Parade, among others. A lot of these bozos hold amateur licenses, Tech Plus and up, so they have taken the Morse exam and still are irritants. So much for the "filter" theory....

And no, I don't consider a no-code Tech to be any less of a ham than a Novice or a Tech Plus or anyone else. Everyone with an interest in amateur radio should be able to participate without having to demonstrate knowledge of a mode that they will probably never use.

It was suggested in a reply to a related thread on another newsgroup that the whole exam structure should be tossed as well, if Morse is eliminated. Not true, nor do I even consider suggesting it. If we as amateurs are going to be responsible for the emissions coming from our stations, we must be able to prove that we know what we are doing, we understand our responsibilities under Part 97, and that we have the necessary skills to recognize and correct problems as they arise, or to prevent them from happening at all.

So yes, passing the written exams are a valid entry requirement. In fact, they should probably be even more of a test of our knowledge and skills than they are at present. I'd go along with an increase in the number of questions in the exams, especially in the areas of what is permitted and prohibited in the operation of our stations. For one thing, it gives the FCC additional ammunition in prosecution of operators who violate the regulations -- Mr. Hollingsworth can point to the exam taken by "Joe Ham, KA6XYZ" and say, "See, this person answered the questions correctly, demonstrating that he knew that such-and-such was illegal, then went ahead and did it anyway."

> spot ?

Hmmmmm...no , not exactly. Hug and chalk is when they are more than a body
can handle and ya wanta give em a hug. You need to mark the spot where
your hand stopped, so you knew where to start again.

You can tell TIT ain't from the south.

You know thats a LIE, I never wanted the Extra. But I guess I need to explain
to you again.
A Bunch of No-Code Knuckle Draggers bet me $250.00 I couldnt pass the TEST.
Well I not only passed with a score of 100%, with no study at all, I got to
collect $250.00 From the Knuckle Draggers.
As I remember you still are not able to pass it.

Do they keep the completed exams beyond a few months? The VEs? Or the FCC?
Anyway, it would be possible to get most of the rules and regs questions
wrong and
still pass the exam. My father got his advanced back in 72 down at the
FCC field
office in NYC. The examiner told him he passed, but to reread the rules
and regs
before he goes on the air. He got most of those questions wrong. Point
is, that you
could have a rule or reg misunderstood, and still pass to get the
license. Most rules
that do get violated often and the FCC goes after are ones people should
know
better. Who would think that jamming a repeater is legal and proper?

Ah, yes...the "if they can't argue the argument, make fun of it" mantra.

>Sorry, but that just doesn't stand up in the light of day, Steve.

Sure it does, Hans. The present system was set up in such a way as to encourage licensees to pursue a program of self study.

The alternatives I have seen here lately suggest that potential new licensees are either idiots for whom we must dilute the test to it's least common denominator, or that we must hang a seriously big carrot out in front to get them to get involved. THAT doesn't stand up in the light of day, Hans.

The current licensing strucure has already PROVEN that the tests are reasonable (when the material is sequestered) and that it provides for a structured occupancy of the bands.

There was no "ghettos" from Incentive Licensing, Hans. Yes, there were hundreds of disenfranchised Amateurs who were, in fact, cheated out of something they had already been using. That was indeed unfair to say the very least.

As for "free upgrades", the FCC already unleased THAT genie with thier last round of "restructuring" with no help at all from the ARRL.

>really want?

One radio service with a TIERED license structure, Brain.

Obviously you do not concur with the FCC's "Basis and Purpose" of the
Amateur Radio Service, espeically those that establish the service as one of
"self-training".

A "single license" concept does not support that premise, Brain. A tiered
one does.

Was that too difficult for you?

If I were interested in ham radio, I'd have a ham radio license.

But I'm a SWL and so I could care less about QST, CQ, 73 and Ham Radio. It's "interesting" to see so many x-posts to r.r.s about ham radio.

About 45 years ago I used ta listen to hams and decided that I didn't want to be one nor continue listening to them. Most of my closest friends are hams but they've given up on "converting" me (even when I help them with tech "stuff").

The great majority of hams are nice people and they sure do justify more than their hobby when there's an emergency. But why they think that SWLer's are

interested in /their/ hobby still puzzles me.

There are times when there are mutual interests. When a ham goes feral and starts broadcasting as a pirate and a felon, this can connect both hobbies and such as that makes me not want to just automatically killfool all the ham newsgroups.

But look at this SUBJ: "Why you don't like the ARRL".

And - of the four newsgroups - two are for SWLers and CBers.

May I ask for as little more care when deciding to what many newsgroups one posts to?

Thanks,

Gray Shockley

Sadly, we don't always have much control over where messages are cross-posted, Gray. Since some Hams are CB'ers and others SWL's, the discussion itself may have actually started in one of those non-ham newsgroups. In other cases, it is trolls (in any one of the newsgroups) trying to belittle Ham radio and it's operators (posted to a number of newsgroups in an effort to get the widest possible audience for that). In still other cases, the discussion started in a ham radio newsgroup, with other newsgroups added by participants who mainly frequent those other newsgroups. Whatever the case, you're certainly not alone - we get our share of messages relating to other topics posted in the Ham radio newsgroups as well.

Ya' go where the money is! Engineering is great, but the law, and management is greater if you're talking from a money angle.

Engineers are workers. They should probably have a division in the UAW, 'cuz sure as you're born, if you're a worker (employee), you're going to get abused.

Those doing the abusing are the guys with the MBAs.

There are no longer enough jobs to be had to simply leave if you get abused, you mostly have to take it. If you do leave, chances are you'll just get abused by different people.

Lawyers hang out a shingle and charge what the traffic will bear. They don't have someone else setting their pay rates, nor screwing around with their health insurance, making them sign away their rights to anything they might be able to think up and patent, etc.

Look at what's happened to programmers. Their livelihood has been destroyed both by importation of cheap labor (H1B visas) and export of the work entirely to places like India, Russia, etc. If you move the needle on the idiot meter at all, you may just get into programming school. Then you can figure significantly in the unemplyoment statistics, or the "working poor" statistics.

You mostly can't export what an MBA does, nor can cheap foreign labor be imported to do it. Ditto for the law practicioners.

So, no need to wonder why the kids aren't falling all over themselves to get in line to be abused.

I think the kids today are smarter than we were...

Hans, that was the old pecking order stuff. I foresee a new ARS where
if you want to know how long an amateur has been licensed, you simply
ask him. And if you want to know the amateur's achievements, you
don't look at how short his call sign is, you look on the air, the
www, and to the journals and see who is doing what. No Merit Badge
system required, but I guess we could move toward hash marks on the
sleeves if need be.

My mentor, W0VDI, was licensed at a Tech in 1952 and went SK 50
> years later with the same call and the same Tech license.

Absolutely no shame in that, though some would think so.

Wonder if he put up with 50 years of "encouragement" to "upgrade?"

Waddles *is* still around. It's a wonder there's anyone left getting his posts, eh? He keeps ragging on folks for not wanting to upgrade to Extra. Well, as I recall, Waddles never planned on the Extra until his (legendary for sure) bet was presented. He had a price, you don't. You've decided (so far) not to go for Extra and you've stood by your decision--unlike Waddles who can't keep to a decision.

And, ain't it a hoot that he's out from the lower ranks and sittin' right up there with the ranks of other Extras whom you and I know are rather questionable in nature, motivation, and even personality? LOL

Where are you anyway?? You can get MT on line. CQ and POPComm did always
suck. 73, at least Wayne's editorial, was pretty weird. You can get QST
all over the place around the Toledo/Detroit area. All the bookstores
have it, a couple of drugstores have it, and I think at least one of the
Meijer's has it too.

Know what would solve a *lot* of discontent with the current licensing system(?)--at least from the perspective of those who think the current system lends itself to "dumbed" down hams; which is absurd by the way, there a loads of dumbed down long-licensed hams.

Keep the written exam, nix all CW or alternative mode testing, and increase the license fee to at least that of the GMRS fee of $75.00 (not sure for how long that $75.00 is good for).

Speaking of which, the FCC needs to update the whole section on ham radio R&R. ESPECIALLY the Basis and Purpose. That portion is so far removed from the spirit and letter of reasons why people are in ham radio these days, and that's a pity of course--but a reality nevertheless.

Mike,

Why the (at least implied) premise that there will be an "aftermath" when Morse testing finally, completely goes away?

What sort of doom and gloom scenario are you envisioning?

How is this any different than the dire predictions of the end of ham radio when spark gave way to CW, AM to SSB, etc.???

All of these predictions have failed to come to pass ...

There IS no "vacuum" to be filled, or anything necessary to "replace," Morse testing when it goes ... it's simply unecessary, so it logically follows that it is not necessary to "find something to replace it."

>It is a "TIRED" radio structure.

Not at all!

It's a "tried and true" license structure.

When "incentive licensing" was re-established in 1968, there were about 250,000
US hams. Today there are about 680,000.

>If you want Merit Badges, join the
>BSA (or CAP).

License class is not a merit badge.

>There is no need to have class distinctions between
>hams artificially created by the FCC.

License class is not about class distinctions. It's about qualification for
privileges. In order to have full privileges, the knowledge to pass the Extra
is required. Same for the other classes. More knowledge, more privileges.

This doesn't mean an Extra knows everyhting there is to know about amateur
radio because they passed the tests. It just means that said Extra has
demonstrated the *minimum* knowledge required for full privileges.

>Allow the ham to distinguish
>himself or herself, based upon actual achievements.

Such as?
>

>achievements.
>
Such as what? Number of antennas not erected? Number of details forgotten about an alleged DX operation?

You want one class of license, fine. Here's how to do it:

First, put aside the code test issue and concentrate on the writtens.

Second, close off the Tech and General to new issues.

Third, combine the existing Tech, General and Extra question pools into one large question pool. Eliminate any questions that are specific to the Tech or General license classes because they won't be issued new any more.

Fourth, a single new 120 question written exam would be generated from the combined question pool. All new hams would have to pass this test to become hams. All would get "Amateur Class" licenses with all privileges.

Fifth, all existing hams would have their license terms automatically extended to 10 years beyond the date on which the new rules took effect. No renewals.

Sixth, all existing hams would have to retest using the new "Amateur Class" test within the next 10 years or leave the air.

At the end of 10 years we'd all have the same license class and all have passed the same test to get it.

Why not?

I doubt it! Capitalism is a grand thing, but it destroys the people who
practice it if they don't have a guiding principle beyond pecuniary

accumulation.

Want to know what happens to us when we are all MBA's and lawyers and the rest of the world is doing all the manufacturing and the things too *low* for us? It isn't going to be pretty!

With 30 million people in this country laboring at equal to or less than the $8.25 / hr wage that the government defines as poverty level, that would pretty much say that, "We have met the enemy, and he is us."
>
> Want to know what happens to us when we are all MBA's and lawyers and

>*low* for us? It isn't going to be pretty!

All we have to do is wait - we'll find out. Doesn't matter if its Democrats or Republicans, nobody's gonna do anything for workers any more. It has to do with the waning of union power, I think, and the mistake that "tech" people including engineers make that they don't need a union. If you're an employee, you need a union. Period. But the IT bunch won't join one, and look what happened to them.

Engineers are next.

Even people at the top of the pay scale - pro ball players, actors, etc - have unions. Why do techs think they're so indispensible as to not need one?

>and increase the license fee to at least that of the GMRS fee of >$75.00 (not sure for how long that $75.00 is good for).

There's where we differ. At present there is no license fee paid to the U S Treasury via the FCC. The League worked very hard to make sure that the politicians didn't have such a route to our wallets and I feel strongly that it should remain that way. Unfortunately, we were not successful in keeping the so-called "vanity call sign" program fee-free - even the sobriquet "vanity" was imposed by The Congress. I would have liked it called something else, like "selected".

Note that the FCC doesn't get a nickel of license fees - they go directly into the Treasury's General Fund. The requirement for levying such fees is mandated by act of Congress and the FCC just jumps and asks "how high" on the way up.

The exam fee paid to the private-sector VE teams is something else, and can only be imposed on a reimbursement level.

There have been engineer's unions for at least the last 50 years in
the aircradt industry. Having worked one year as an engineer for an
airplane company at the beginning of my career, I can see why. Real
professionals look down on unionizing.

>Those doing the abusing are the guys with the MBAs.

Read it not as ab-using, but as con-fusing.

>Lawyers hang out a shingle and charge what the traffic will bear.
>They don't have someone else setting their pay rates, nor screwing

HAH! Talk to any associate at any decent-sized law firm and get an
education otherwise.

As for going solo - did it, been there, got the T-shirt, and I
wouldn't do it again. I love to do law - I hate to run a business.

>You mostly can't export what an MBA does,

Give it time, my man - they used to say the same thing about
engineers.

>nor can cheap foreign labor be imported to do it. Ditto for the law
>practicioners.

Wanna bet? The top two guys in my law school class were from India,
and that was many years ago. One is also an MBA and CPA and runs
his family's extensive business interests in the 'States, and the
other is one of the top immigration lawyers in California.

It's easy to make such generalities.

I have a brilliant solution for you, Kim.

Draft a document called a Petition for Rule Making and in it say:

I request that Part 97 of the FCC Rules and Regulations be amended
to read as follows:

and then write what YOU think the exact wording of each section that
you want changes should say. Add to that the reasons for each change
and your standing and qualfications for them to give serious
consideration to your request.

Send it to the Secretary of the Commission, original and 11 copies.

Then sit back and wait. I wish you luck.

Bovine excrement.

Did you learn how to crank an engine to start your car before you took a driving test? Did you have to learn to run to the outhouse and use dried leaves (or corn cobs) before the days of indoor plumbing and toilet paper? Whether you did or didn't, it's irrelevant to the rest of us. Exactly the same as Morse code.

Nobody worth mentioning uses CW any more; the military dropped its' use years ago and their communications are necessary (unlike amateur radio). The Coast Guard doesn't even use it any more. So, given the facts, why should I have to learn it to please you?

TROLL!

I'd like to believe I don't have one. But you're probably right. I don't have one, though, where ham radio is concerned--it's not that much of a passion for me. The way I feel about it's the way I feel about it.

> >

Real professional actors, football players, baseball players, etc. don't seem
to look down on unionization.

My guess is that the airplane engineers get screwed less, and have more secure
jobs, save the periodic downturns in the aircraft industry itself.

I bet, but then there's that "organization" thing. Work for an organization
(be an employee) and... you need a union.

> As for going solo - did it, been there, got the T-shirt, and I

I'd hate it too, I think.

MBA's are performing a service where they have to be present. They're not
going to offshore the pizza delivery guy, either - he has to be here to do the

work, too. Of course, entire corporate headquarters have moved off-shore I guess, so apparently it is possible.

>>nor can cheap foreign labor be imported to do it. Ditto for the law

I suppose if they are educated here... sure. But growing up in India, Russia, Korea, and learning Indian, Russian, or Korean law won't do you any good in the USA. The problem with engineering and IT is that the laws of physics, and the principles of good software design and construction, are universal. What works in India, Russia, and Korea works here, and vice-versa.

> It's easy to make such generalities.

The generality that holds is: If you are an employee, you need a union. I think exceptions are pretty rare. Again, the number of people, 30 million, in poverty-level wage jobs (<= $8.25 / hr) pretty much says that this is right. All those people would likely do much better with a union.

I'm a government engineer. I work for the Navy. Don't need a union, right? Wrong! In the 1980's, the OPM illegally capped the across the board raises of engineers on the advanced engineering pay scale. Who should step up to the plate but the Treasury Employee's Union, and sued the socks off the government for 2 decades. Finally won the case last year. Last week I got a check as partial payment for compensation for that misdeed - $1090.95. Unions don't have to strike to get results, even if the results come later. Maybe the OPM will realize eventually that even tho they're the government, they're not omnipotent, and have to play by the rules, like everyone else. Anyway, I'm better off because of a union.

Without a resurgence of union power, I think this country is headed for a third-world model society, where there are the very rich, and the very poor, and nobody in between. The people slinging code and designing/building bridges won't be on the "very rich" side, either. They'll be the ones that are willing to work for $8.00 / hr, side-by-side with the Indians, Mexicans, Russians, etc. that will be quite happy with that amount. Its a matter of how far in the future that is... I guess about 50 years. What's your guess?

Supporting a "learner's permit" license contradicts the concept of not having class distinctions as discussed in the earlier part the post. Once you have more than one license class for any reason, you have a class distinction, which according to your posts is undesirable.

Where did you get that idea?

Morse code testing was implemented for a number of reasons, but limiting the number of hams wasn't one of them. And in 1968, when the requirements for full amateur privileges were increased in both the written and code tests, the number of hams began to grow again after at least 5 years of stagnation at the quarter-million mark.

>> or General license classes because they won't be issued new any more.
>
>Such as operating priveleges?

Exactly. If there's to be one license class, it would have to be for all
operating priviliges, so there's no need to test on where the old
subbands-by-license-class used to be. But that's about all that would be
removed.

>> At the end of 10 years we'd all have the same license class and all have
>> passed the same test to get it.
>>
>> Why not?
>
>Why not, Indeed?

Two reasons:

1) All newcomers would have to pass a written test about equivalent to the
Extra just to get on the air.

2) Existing hams would have to retest at that level or leave the air.

How many US hams do you think would be left in 10 years under such a system?

>Deal.
>
>You run it up the flag

No. It's your idea.

You want it, you do the work. Self-training, remember? Learn how to write and submit a proposal to the FCC and get an RM number assigned. Then see what the amateur community thinks of your ideas in their comments.

I don't want such a system - I just described what would logically be the structure of such a system. I did it to point out exactly what such a system would require, and some of the foreseeable consequences.

>and I'll support it, perhaps with Han's caveat
>of a non-renewable learner's permit, limited by power and scope, but
>not mode.

No. You said one class of license. That means no learner's permits, no easy-to-get licenses, just one class of license. Unless you support "dumbing down", such a license would have to require roughly the equivalent written test knowledge as an Extra. Some regulations questions could be eliminated but that's all.

Or were you lying about wanting one class of license?

Right again, but the trouble is that there is no longer any incentive to go for a productive career. You can't blame people for not lining up to be exploited, even if the end result is likely to be destruction of the soceity as a whole. What we have now is a management culture in which having a low number of overworked employees is considered to be desirable.

Actually, you know India is a common law country, so Indian law would be very similar to US law, and Indian lawyers all speak English too. Being licenced to practice is quite another thing altogether, but I could see paying someone in Delhi to draw up a contract, etc. Of course the case law would be different, but they can access Lexis/Nexis and WestLaw from there too, so legal research is no problem.

Dave,

I partly agree with you. A lot of the problem is waning union power.

But that doesn't mean everyone needs to be unionized. The mere existence of strong unions benefits nonunion workers, too, because often employers with nonunion shops will treat their workers better in order to stave off unionization.

But as the percentage of labor that is unionized decreases, that effect diminishes also.

Huh? CW testing was implemented because when the Amateur Radio service began with the Radio Act of 1912, CW was *the* main mode of communication. The CW test was 5wpm, same as it is now. How did you ever come up with the idiotic idea it was implemented to limit the number of amateurs?

Can you think of another job you might like to do as well as tech, but the pay sucks? I can. I could maybe have been a photographer. But unless you're absolutely exceptional (I don't have _talent_... my pictures would have to be good via training & practice, and would then still not rival the truely greats) you're likely to starve a lot. So, I didn't get into photography for a living. Its a hobby.

> I've had a screwed up outlook all these years!!!!

I dunno - if you really think about it, was there maybe a point you passed up something equally or nearly as interesting as tech because the pay sucked?

One could do something lucrative for a living, and reserve tech to be a hobby, like ham radio.

Even though only temporary, it's still a separate class.

The Morse test speed for was increased to 13 wpm as a direct effort to limit the number of hams - and the moving force was the ARRL - it's documented in public records in the Library of Congress and was researched by a certified archivist.

See the article at http://www.nocode.org/articles.html - scroll way down to the bottom it's the 3rd article from the bottom.

Tell that to my wife who spent several years correcting and re-doing
the engineering designs of Russian-educated emigre engineers in the
US who across the board act as if electrical codes and Ohm's Law
are mere suggestions. She's now on the staff of the world's largest
environmental engineering consultant, and there's no union or need
for one. She would never have joined them if there was, and if one
comes in, she's gone.

>I'm a government engineer. I work for the Navy. Don't need a union, right?

I had 30 years as an engineer and law enforcement manager with The Uncle -
wannna' trade horror stories? Especially those where "the union"
stood by and did nothing?

>Wrong! In the 1980's, the OPM illegally capped the across the board raises of
>engineers on the advanced engineering pay scale. Who should step up to the
>plate but the Treasury Employee's Union, and sued the socks off the government
>for 2 decades. Finally won the case last year. Last week I got a check as
>partial payment for compensation for that misdeed - $1090.95.

My folks were represented by the NTEU and in fact a good friend was
the "field VP" of the local. He finally saw the light as to what
"the union" would do or not do and resigned. He's now retired, as
am I.

Navy engineer, huh? Remember the "demonstration project" at the
Naval Ocean Systems Center (San Diego) where all statutory
protections of employees were suspended and all pay raises capped?
Where was the union on that one? A close buddy was denied the step
raise that he would otherwise been entitled to by regulation. He
retired after 33 years as a specialized acoustic engineer with the
Navy. Guess who was the loser (Answer: not him...)

The union couldn't or wouldn't do a damn thing when the chairman of
the FCC decided to RIF several hundred engineers, technicians, and
non-technical enforcement agents because he didn't understand the
need for field enforcement. Two of the folks working for me,
excellent performers, got caught up in that mess, and they didn't
deserve it.

Ham radio, as well as all other radio services, are suffering the
results of that ill-informed decision almost 10 years later.

Enough of this ..this is not the place to argue this point.

It may have been increased for that purpose, but it was not originally
implemented for that purpose.

The key word is "implemented" - not increased.

Here's "the rest of the story":

The year was 1936.

US amateur radio had grown faster than at any time before or since.
The number of US hams had almost tripled since 1929, despite the Great
Depression and highly restrictive new rules that went into effect in
1929.

There were serious problems with interference, poor signals,
out-of-band operation, and overcrowding of the bands, and rapid
turnover of new hams (approaching 40% per year).

The remedy was twofold: Both the written test and the code test were
revised. The written test was upgraded and the code test increased
from 10 wpm (where it had been since 1919)to 13 wpm.

ARRL asked for 12-1/2 wpm but FCC went for 13. There was also a big
redoing of the written tests, but somehow that fact is forgotten...

>
> See the article at http://www.nocode.org/articles.html - scroll way down to
> the bottom it's the 3rd article from the bottom.

That's why the code test of 67 years ago was increased by 3 wpm from
10 to 13 - but not why it was implemented in the first place.

Some folks wonder about the claim of overcrowding. In order to
appreciate what amateur radio was like back then, it's necessary to
understand what technologies and operating practices were in use by
average hams.

Consider this: The bands were crowded enough back then that as early
as 1931 some enterprising hams (W6DEI, Ray Moore, and others) built
and operated single-sideband transmitters and receivers.

Elmering.

SKN is an elmering opportunity. If you know the code, and you want to see it continue as part of our ham radio culture, you have to pass it on. Nobody teaches CW any more. We used to have converts from the military, where CW ops were to learn code or face a courtmartial. They got to 20WPM in a couple of weeks but had a gun to their heads for 8 hours a day to do it. Learning CW is a one-on-one activity and each of us CW ops needs to feel an obligation to our elmers to pass it on. SKN is designed to do just that.

Get on the air. Encourage friends that have expressed interest in CW to get on the air and provide them a Q. That's what SKN is all about. Check out the old novice bands and try a CQ at 12 WPM or even slower. You don't HAVE to use a straight key. Many CW ops don't even own one. I didn't until last year when I tried my first ever SKN. So don't feel pressure to not operate because you don't have a straight key. Just tell whoever you talk to that you are using an electronic contrivance to facilitate the code sending. The ARRL has a competition for "the best fist heard." Don't even think about accepting that award either.

And let me tell you it isn't easy slowing down to 5 WPM and still be able to copy. And the rusty old key don't seem to work with the grace that used to fill the novice bands with music. It's much easier at 30WPM. It was baby steps that got you to where you are and it's baby steps that will get others there too.

Take a shot at the new "@" character. It's not easy for me to send for some reason. CA run together is not in this op's vocabulary. dah dit dah dit dit dah was a good choice for the character, but it's one trick this old dog is resisting for some reason.

Look for me in the old novice bands on 80M and 40M. Afterwords, represent to me that you worked 10 Qs and you will have some MWA Brasso to spiff up the old key. And turn in your soapbox at the ARRL. Tell us about your elmer too.

Straight Key Night in Minnesota and Surrounding Areas

New Year's Eve is just around the corner. You could stay up and watch the "ball drop" in New York at 11PM local or get on the air with your old Radio Shack straight key and recapture some of the nostalgic magic of radio. It will be fun. And this year, you can participate in a the ARRL sponsored SKN and receive special recognition sponsored by the MWA.

Straight Key Night (SKN) is 24 hours. SKN 2004 begins at 6:00 p.m. CST December 31 and runs for 24 hours through 6:00 p.m. CST January 1 (0000 --2400 UTC January 1, 2004). Rules are found here...

http://www.arrl.org/contests/rules/2004/skn.html

The Minnesota Wireless Association (http://wb0tra.no-ip.org/mwa/) is a local contesting group whose official ARRL territory is a 175 mile radius circle centered on Sauk Centre, MN. If you fall within the MWA circle, and DON'T consider yourself a seasoned CW op, you could win a real J-38 straight key to replace that old Radio Shack special just by booking at least 10 QSOs.

Anyone in MWAland is eligible to participate in SKN. However, to be eligible to win the J-38, you cannot be a seasoned CW op. Anyone who has posted over 2,000 CW contest QSOs or handled more than 100 pieces of CW traffic is not eligible to participate in the grand prize J-38 special. But forget about the awards. Just get on and operate CW!

SKN is not a true "contest." Instead, it is designed to promote CW as a second language. There are lots of CW op wanna-bees in the area. There is no better time than right now to start the learning process, and receive some recognition for your effort.

Any participant within the MWA territory who completes 10 CW QSOs on SKN (24 hour period) will receive an MWA Certificate of Achievement and a personalized bottle of MWA SKN Brasso to help keep the old Brass Straight Key in fine shape. The J-38 award, mounted on a beautiful Hickory (Pecan) wooden base, will be presented based on representations and claims, rather than any sort of log checking. The J-38 award will be based on time spent operating, the number, and primarily the quality of QSOs (keep your notes about name, city, state, RST, age, years a ham, other discussions in the QSOs, etc., to complete the questionaire). A summary of those participating will be posted on the MWA reflector and on the club's web page in summary form only. The final award will be delivered to the meeting this fall, although you need not attend the annual meeting to win the J-38. A questionaire will be used to determine eligibility and final awards. Decisions of the judges (N0FP Chair) are final. All official

correspondence regarding the MWA SKN should be emailed to N0FP@arrl.net.

But, as you and I have agred before, the privileges gained do NOT relate to
the additional knowledge needed for the higher license class.
What is the technical competency difference between an Extra

operating SSB with a TS440 in the 80m Extra voice segment vs a General
operating the same rig at say 3.885Mhz?

> This doesn't mean an Extra knows everyhting there is to know about amateur

The problem, again one we agreed on before, is that granting
additional frequency spectrum doesn't rationally flow from the
additional knowledge required for the higher license class (e.g.
Extra vs General, General vs Tech.

True under the current scheme of licensing for the USA. It could
be changed and that is the point raised in this discussion. Should
it be changed and if so, how?

Never happen.

> Sixth, all existing hams would have to retest using the new "Amateur
Class"
> test within the next 10 years or leave the air.

Never happen. You want a way to kill ham radio, then that'd
do it in a heartbeat...a 10 year heartbeat at the longest.

> At the end of 10 years we'd all have the same license class and all have
passed
> the same test to get it.

At the end of 10 years we'd have no ham service of any consequence.
Retesting does NOT get any support at all. A handful of people
propose retesting (I oppose retesting)...but that is all. If 1968 incentive
licensing drove some folks away, you can bet the "all existing
hams would need to be retested" will certainly do it.

> Why not?

Please tell me any example of something you do in life that
requires anyone to be knowledge retested...other than
something in the medical field such as CPR recertification.

Cheers and happy new year.

Fair statement.

The "original" morse requirement was to
enable non-amateur stations to dialog via morse with
amateur stations in case of interfereing operation.

The increase to 13wpm was, as the article states, intended
to raise the bar of entrance criteria to limit the number
of new hams.

> at least not while the "old guard" of CW loyalists are still around.

The issue has been resolved internationally in July of
this year. There is NO code requirement necessary
anymore to stay compliant with international treaty
agreements.

Since July '03, a number of countries, including Great Britain,
Netherlands, Belgium and others have already ended
or announced an end date for morse testing in their
contry's requirments.

At some point the FCC will drop all code testing
also. The direction is clear, the path has been taken,
there's no turning back. The FCC provided every
opportunity to pro-code advocates to argue their
case and the pro-coders failed to convince the FCC
as to there being any need (other than the ITU treaty
at the time) for code testing at all.

The only thing at issue will be how soon?

Cheers,
Bill K2UNK

regor ;-)

Seriously though.... I wish they wouldn't remove the code requirement on HF.
It creates a new goal to get onto those bands. (Admittedly, I don't have
code either).

Yeah... I was one to check in on that net also... but being only 30 air
miles from the 'boy broadcaster' I gave up on it...
Fact is, I've given up on amateur radio in general. You may not know or
understand but this issue with k1man will be the rallying cry for those
that want to do away with amateur radio totally...

Look and understand what Glenn did for the AM maximum power situation and
you too will see beyond the 'truth' and see the 'facts' of this matter...

>amateur stations in case of interfereing operation.

That was one reason. Here are some others:

- To permit amateur stations to dialog via morse with each other
- To set a minimum standard of operator qualification so that newcomers would
not try to learn the code on the air. (Remember that in the early days the
effective selectivity of radio systems was not very good)
- To support hte idea of the amateur service as a training ground for
commercial and military operators
- To support the use of the most spectrum-efficient mode then available

>The increase to 13wpm was, as the article states, intended
>to raise the bar of entrance criteria to limit the number

Bill,

Remember how the number of US hams barely moved from 1962 to 1968?

FCC disagrees, Bill.

>What is the technical competency difference between an Extra
>operating SSB with a TS440 in the 80m Extra voice segment vs a General
>operating the same rig at say 3.885Mhz?

Not much! But the FCC thinks it's a good idea to reward additional
technical knowledge with more privileges.

For that matter, what is the technical competency difference between operating
CW on the low end of 2 meters vs. the low end of 20 meters? (note that I wrote
technical)

It rationally flows if you buy into FCC's logic on the matter.

Would you rather that FCC did away with the Extra, Bill? For that matter, what
about the General?

>it be changed and if so, how?

I wrote up a suggested three-tiered system some time back and reposted it
recently. I think it's the best compromise between all the various
considerations. YMMV.

Please note the following sentence. I'm *not* saying I want one class of
license! I'm simply describing how to do it.

>> You want one class of license, fine. Here's how to do it:
>>
>> First, put aside the code test issue and concentrate on the writtens.
>>
>> Second, close off the Tech and General to new issues.
>>
>> Third, combine the existing Tech, General and Extra question pools into
>> one large question pool. Eliminate any questions that are specific to the
Tech
>> or General license classes because they won't be issued new any more.
>>
>> Fourth, a single new 120 question written exam would be generated from the

>> become hams. All would get "Amateur Class" licenses with all privileges.
>>
>> Fifth, all existing hams would have their license terms automatically
>> extended to 10 years beyond the date on which the new rules took effect. No
>> renewals.
>
>Never happen.

I hope you're right, Bill. But I learned long ago to "never say never".
>
>> Sixth, all existing hams would have to retest using the new "Amateur
>> Class" test within the next 10 years or leave the air.
>
>Never happen. You want a way to kill ham radio, then that'd
>do it in a heartbeat...a 10 year heartbeat at the longest.

Exactly! But the hams who remained would all have passed the same test so
there's be no more license-based "class distinctions". That's the point.
>
>> At the end of 10 years we'd all have the same license class and all have
>> passed the same test to get it.
>
>At the end of 10 years we'd have no ham service of any consequence.

Sure we would. Just not the one you or I want. But it would be more like what Brian wants.

>Retesting does NOT get any support at all. A handful of people
>propose retesting (I oppose retesting)...but that is all. If 1968 incentive
>licensing drove some folks away, you can bet the "all existing
>hams would need to be retested" will certainly do it.

I think most active hams would just take the %^&#$% test and be done with it. The problem is that many semi-active or inactive hams wouldn't, and we'd see a drastic reduction in numbers. Bad news.Very bad news.

To repeat: I'm not in favor of a one-class system. I'm just pointing out where such a system would lead.
>
>> Why not?
>
>Please tell me any example of something you do in life that
>requires anyone to be knowledge retested...other than
>something in the medical field such as CPR recertification.

In my line of work, (no, I'm not going to say what it is here), employees are constantly retested on safety and procedures. The last time I took a safety test, the passing grade was 100%. Get *one* question wrong and you fail. And in a year or less you have to do it all over again.
>
>Cheers and happy new year.

Tell that to my wife who spent several years correcting and re-doing
the engineering designs of Russian-educated emigre engineers in the
US who across the board act as if electrical codes and Ohm's Law are
mere suggestions. She's now on the staff of the world's largest
environmental engineering consulting company, and there's no union
or need for one. She would never have joined them if there was, and
if one comes in, she's gone.

>I'm a government engineer. I work for the Navy. Don't need a union, right?

I had 30 years as an engineer and enforcement manager with The Uncle -
wannna' trade horror stories? Especially those where "the union"
stood by and did nothing?

>Wrong! In the 1980's, the OPM illegally capped the across the board raises of
>engineers on the advanced engineering pay scale. Who should step up to the
>plate but the Treasury Employee's Union, and sued the socks off the government

>partial payment for compensation for that misdeed - $1090.95.

My folks were represented by the NTEU and in fact a good friend was
the "field VP" of the local. He finally saw the light as to what
"the union" would do or not do and resigned. He's now retired, as
am I.

Navy engineer, huh? Remember the "demonstration project" at the
Naval Ocean Systems Center (San Diego) where all statutory
protections of employees were suspended and all pay raises made
discretionary? Where was the union on that one? A close buddy was
denied the step increase that he would otherwise been entitled to by
regulation. As a result he retired after 33 years as a specialized
acoustic engineer with the Navy. Guess who was the loser (Answer:
not him...)

The union couldn't or wouldn't do a damn thing when the chairman of
the FCC decided to RIF several hundred engineers, technicians, and
non-technical enforcement agents because he didn't understand the
need for field enforcement. Two of the folks working for me,
excellent performers, got caught up in that mess, and they didn't
deserve it.

Ham radio, as well as all other radio services, are still suffering
the results of that ill-informed decision almost 10 years later.

Enough of this...this is not the place to argue this point.

And so do I! The arguments of tying technical knowledge to priveleges
is completely bogus, irritating, and eventually self defeating. That
many NCTA's used it as an argument against Morse code testing does not
make it less so. It's just that now, that bird will come home to roost.

I look at it as more of a philosophy thing than specific logic. They
seem to want people to learn things. Tying knowledge to priveliges is a
good philosophy in my estimation.

> Would you rather that FCC did away with the Extra, Bill? For that matter, what

Lets see now, the amateurs were on the air communicating with code long before it was required they be licensed. Likely, most amateurs could easily do 10 wpm or more. Now along comes licensing *implementing* a 10 wpm code speed (may have orginally been 5 wpm but I can't document that) test along with a technical test. So with amateurs already being able to copy code, just how was this 10 wpm test going to reduce the number of amateurs? It is not a word play, the key word is *implemented*. The code was not *implemented* to reduce the number of amateurs, it was part of the standard to be met to be licensed. If anything the technical part was more likely to reduce the number of amateurs from being licensed than the code. The code may have been *increased* later to in an attempt to limit the numbers of licensees, but it was not *implemented* orginally for that purpose.
At the time, the thing which was thought would do the task of reducing, even eleminating the amatures would be to relegate them to 200 meters. Those wavelengths were thought to be of no use for communications and the amatures would not be able to get a signal out of their back yards, thus in time the amateurs would loose interest and amateur radio would, for all practical purposes, die away.

. . n2ey & Brainiac go at it. "Entertainment is where ya find it" . .

n2ey sez:

> > Some folks wonder about the claim of overcrowding. In order to
> > appreciate what amateur radio was like back then, it's necessary to
> > understand what technologies and operating practices were in use by
> > average hams.

w3rv jumps in here:

I basically agree with your contention but it needs to be expanded
(particularly sincs Brainiac is on the freq). The reason the bands
were "crowded" back then was simply because of the absolutely
ferschtink selectivity even the state-of-the-art superhet rcvrs of
those days provided. On top of the problems those folk had with their
wandering oscillators.

I daresay that if the 1931 hams had any of today's cheapest
consumer-level MF/HF xcvrs they would have, on average, found a
whole lot of dead space between signals in the ham bands.

> > Consider this: The bands were crowded enough back then that as early
> > as 1931 some enterprising hams (W6DEI, Ray Moore, and others) built
> > and operated single-sideband transmitters and receivers.

Here comes me again:

The big trick SSB brought to the game had nothing to do with bandwidth
and/or "interfernce reduction". It had and has everything to do with
the abilty of SSB to eliminate the AM carrier which sucks up power,
equipment space and money and conveys no intelligence to the listener
whatsoever.

Brainiac responds to n2ey:

> But that was some 72 years ago. Cop's invention was only 40 years ago
> and you discount it.
>
> Jim, I'm beginning to see a pattern of untruths and inconsistency in
> your postings. And I'll not ever refer to you as Rev. Jim again, no

I don't know if they keep the exams. From what I understand, the exams
are administered and retained by the VE team rather than the FCC. But I
definitely DO feel that the number of questions should be increased for
each license, with additional weight given to the questions regarding
Part 97 and operating practices, especially for the Tech exam.

Well, we've had at least 1 request to end the thread, but I have to come back this once to say that I believe we can have protection for workers via their own actions, through unions, without going the communist route. I'm pretty seriously anti-communist, but do believe that workers are progressively getting abused and need to do something about it, themselves, since they are the only ones that do or ever will care about their welfare.

True for now. But if anyone is serious about a new license
structure, I'd like to see rational relationship between the
license class knowledge test requirements and whatever
additional privileges are associated with that license.

> >What is the technical competency difference between an Extra

None and that point has been made by myself as well. The only
two truly CW only sub-bands do NOT require passing any
code test to be able to use them.

It only flows as to "pure incentive". It doiesn't flow or relate
at all to the additional knowledge tested to pass the license.

> Would you rather that FCC did away with the Extra, Bill? For that matter,
what
> about the General?

Did I even hint at that. The answer is basically no...although
I have NO preference for or against changing license structure
to a more rational basis for added privileges.

IF the numbers of hams dropped considerably because of the proposal,
I seriously doubt the service as well as ham organizations would survive.
Calling for all retesting of existing hams would play right into the hands
of

the commercial interests that would love to get us off the air completely.

Actually I'd like to see a new, separate element that is devoted entirely to rules and regulations that would have to be passed before taking the technical elements for the license classes. One should not be able to get on the air if they miss a significant percentage of the rules. As some have commented, right now it is quite possible to miss the majority of the regulatory questions on an exam yet still pass the exam. The exams for the various classes could then focus on operating procedures and technical elements. For example, let's call the rules test Element R and then for the various licenses we could have a system as follows:

Technician - Element R, Element 2
Technician with HF - Element R, Element 1, Element 2
General - Element R, Element 1, Element 2, Element 3
Extra - Element R, Element 1, Element 2, Element 3

Although if it is a truly comprehensive rules test, I'd would find it acceptable to eliminate element 1 for Tech with HF thus combining the current Tech & Tech with HF and perhaps even for General.

Too many people just gloss over the rules and are not willing to look them up. They then rely on other people who have also glossed over the rules when they have a question and get some really bad information.

I believe Jim N2EY and I have a similar viewpoint as to making
the written into two or more specific and separate elements for
each class. Where I would differ from your suggestion is that
it makes no difference which element(s) are passed first as long
as each stands on its own.

You may not be aware but HAMS operate on SHORTWAVE, so do CB
operators. Doesn't matter HF, VHF, UHF. Still shortwave.

Well, Barnes and Noble in upper Michigan does NOT carry it any more as
B Dalton does not either. I'm now in central Florida and B & N and
Books a Million NO GO.
QST is not available everywhere and you might find it's not available
in the Toledo area anymore.

Theoretically possible, but not really very likely. A person that poorly prepared would likely miss several other questions on the exam, meaning he or she would almost have to get the majority correct on each part of the exam to pass the overall exam. That is one of the strengths of this type of exam.

> focus on operating procedures and technical
> elements. (snip)

What about the rules specific to each license class (VE rules, for example)? Also, some important rules are reenforced by repeating them at least one more time in another exam. How would you handle that?

> For example, let's call the rules test Element
> R and then for the various licenses we could
> have a system as follows: (snip)

The rules are already in the current Technician exam and reenforced in the General (and a few even reenforced in the Extra). A single exam for the rules would eliminate that system of reenforcement. Also, there are about 100 questions in the current written exams, from a pool of about 600 questions. Beyond the rules, how would you break those questions down for each element?

Finally, I have to wonder if there is any reason to change the exams at all. The current exams have evolved over many years, and I just don't see how the suggested changes I've seen (yours and others) offer a real improvement.

Good point Mr. V !

The likely proof of this is the several ad's he has on his
website for you own "IARN Visa and/or Master Card".
It would not suprise me if we soon see him hawking
Sprint Pre-Paid telephone calling cards or pay-as-you-go
Nokia cellphones for sale.

funny though, he don't sell and ham gear. What's up with this?

Why you think hams are interested in what radios and antennas you use to
SWL with is beyond me.

5087. Ham Fest Entrepreneur

Michael Hughes, a 21 year old ham radio op, has come up with
a unique money making idea for hamfests.

After attending hamfest for years and experiencing the putrid
body odor which hams emit at hamfest and seeing the thousands of
unshaven faces, Michael has joined forces with a national
toiletries company to produce the first ever "Ham Radio
Convention Personal Hygiene Kit."

The kits will be hawked on the convention floor for under $5,
according to Michael, which is a reasonable price for hams
who would rather spend money on radio junk than personal
hygiene items.

Kiosks, where the kits will be sold on the convention floor, will
have large signs over them with the words, "Hams Stink."
"That alone will get people's attention," said Michael.

> >
> > 1953 to 1968. Then FCC decided that it wasn't enough.
>
> But didn't the FCC first decide that it was enough?

Nope.

From the FCC's/FRC's origins in the early 1930s until 1951, there was effectively a two-level system (Class A/B/C, but a C was just a B by mail). Class A was required for full privileges, and it required an advanced written test (with essay questions and diagrams) plus a year as a Class B or C.

From 1951 to 1953, an Advanced or Extra was required for full privileges.

From 1968 until the present, an Extra has been required for full privileges.

So out of about 70 years of FRC/FCC regulation of amateur radio, the period of "Generals get it all" was a bit less than 16 years. And even then it was a three-level system (Novice, Tech, General-and-above).

> Some would call
> this era the golden years of amateur radio.

Which era?

I'd call the present era the golden years. We have all sorts of wonderful equipment and modes never dreamed of before, at lower prices (adjusted for inflation) than could have been imagined at any time in the past. More hams, more DX, more opportunities.

> I've seen your on-line help.

Do you subscribe to the reflectors where I give most of it?

> You and Kelly make a great tag-team.

He knows far more about practical HF antennas than I. I'm EE, he's ME,
practical amateur radio antennas are about 10% EE and 90% ME. And
that's probably exaggerating the EE part.
>
> > How many have you taught?
>

Your choice.

Note the following sentence:
>
> > >> You want one class of license, fine.

See what it says? I was writing about what *YOU* say you want.

> > >> Here's how to do it:
> > >>
> > >> First, put aside the code test issue and concentrate on the writtens.
>

> > >What? No learners permit?
> >
> > Nope. You said you want one class of license, no class distinctions, no
> > merit
> > badges. A learner's permit would mean a two-tiered structure.
>

> Nope.

Do you want one class of license or not? One class means one class.

> A person expresses and interest, get a learners permit and has
> access to other amateurs for mentoring.

No license is needed for "access to other amateurs for mentoring". And
what happened to "self training"?

> Then becomes an amateur with
> the "Amateur License." No renewals.

That's a two-class system. By definition.

Would those with "learner's permits" be allowed to be control
operators and have their own stations? If so, then it's a license, not
a learner's permit. If not, and they need a control op, there's no
need for it.

> > You said one license. That means one class of license - no learner's permit.
>
> Learners permit is fatally temporary.

How temporary? Could a person get another one after the first one runs
out?

> Does NOT create an underclass of Amateurs.

Two classes is two classes. Either you want one class or you don't.

> > Or were you lying about wanting one class of license?
>
> Not lying.

Then why do you want two classes of license now?
>
> > >> Third, combine the existing Tech, General and Extra question pools into one

> > >Just leave out "Class" and call it "Amateur License."
> >
> > Whatever.
>
> You wanted a one license ARS, didn't you?

Not me. You're the one that's been yammering on and on about "class distinctions" and "underclass of amateurs" and "merit badges".

Remember these two sentences that I wrote at the beginning of the discussion:

"You want one class of license, fine. Here's how to do it:"
>
> > >> Fifth, all existing hams would have their license terms automatically
> > >> extended
> > >> to 10 years beyond the date on which the new rules took effect. No
> > >> renewals.
> > >>
> > >> Sixth, all existing hams would have to retest using the new "Amateur Class"
> > >> test within the next 10 years or leave the air.
> > >
> > >You could even ask to have the pools FOUO, and/or increase the size to
> > >12,000 questions. Just make the subject matter relavent.
> >
> > What subject matter in the combined question pool that was just described is
> > not relevant?
>
> Example: How many minutes it takes to send a FAX image?
>
> That's nonsense.

No, it's bad grammar. Good grammar would be "How many minutes does it take to send a FAX image?"

Why is it nonsense? Hams use FAX and similar modes. Shouldn't the test cover something about those modes? Or should it only cover modes *you* use?
>
> > >> At the end of 10 years we'd all have the same license class and all have
> > >> passed the same test to get it.
> > >>
> > >> Why not?
> > >
> > >Why not, Indeed?
> >
> > Two reasons:
> >
> > 1) All newcomers would have to pass a written test about equivalent to the
> > Extra just to get on the air.
>
> It was your suggestion.

No, it was my explanation of what your demand for a one-class system
would require.

> I just went along with it.

You've been beating the drum for a one-class system for quite a while
but you're short on the details.

> Why did you drop
> the code discussion out of the equation?

Because you'd never agree to a code test.

> > 2) Existing hams would have to retest at that level or leave the air.
>
> Basis and purpose is fufilled.
>
> > How many US hams do you think would be left in 10 years under such a system?
>
> Only the ones who really worked hard.
>
> > >Deal.
> > >
> > >You run it up the flag
> >
> > No. It's your idea.
>
> No, its your idea.

I don't want it. I simply outlined how to do it.

Remember these two sentences that I wrote at the beginning of the
discussion:

"You want one class of license, fine. Here's how to do it:"

> > You want it, you do the work. Self-training, remember? Learn how to write
> > and submit a proposal to the FCC and get an RM number assigned. Then see
> > what the amateur community thinks of your ideas in their comments.
> >
> > I don't want such a system - I just described what would logically be the
> > structure of such a system. I did it to point out exactly what such a system
> > would require, and some of the foreseeable consequences.
>
> Ah, you ran up a straw man that you really don't support.

Not at all.

I simply outlined how to do something so that all the ramifications
would be
clear.

> You've been
> doing a lot of that lately, i.e., no written exams.

It's called thinking before acting.
>
> Welp, I guess I'll never be able to take you at your word again.

Why? You're the one who has been pounding the drum for a one-class
license system, not me. But you won't do the work to even figure out
the details, let alone write a proposal. Now you're saying you want a
two class system.

Here are those two sentences again:

"You want one class of license, fine. Here's how to do it:"
>
> > >and I'll support it, perhaps with Han's caveat
> > >of a non-renewable learner's permit, limited by power and scope, but
> > >not mode.
> >
> > No. You said one class of license. That means no learner's permits, no
> > easy-to-get licenses, just one class of license. Unless you support "dumbing
> > down", such a license would have to require roughly the equivalent written > > test
knowledge as an Extra. Some regulations questions could be eliminated > > but that's all.
> >
> > Or were you lying about wanting one class of license?
>
> You certainly were.

No, I was not. Nowhere did I say I wanted one class of amateur
license.

Your behavior makes it clear why people don't want to help you, Brian.

I agree with you 150 %.

Let's have the present Element 1 replaced by this "rules" element -
it is more relevant to all amateurs on any band, any class, any mode.

You're not bring politically incorrect - just stupid.

I am sick and tired of the signs and the pious folks who loudly
proclaim that "JESUS IS THE REASON FOR THE SEASON" and "KEEP CHRIST IN
CHRISTMAS". It is moments like this that confirms my suspicion that
most Christians are a bunch of illiterate dumbasses. If one of them
even took a moment to read something else besides the bible, they
would find out that the original reason for the season is the Winter
Solstice. You see, what happens when you read non-fiction is this; you
actually learn something.

For centuries the church could not decide on the proper date of the
birth of JC (bible scholars are still debating if this person actually
existed, or if he was just another concoction of the church to control
the masses), according to Ruth Reichmann of the Max Kade
German-American Center, IUPUI, "Pagans had traditionally decked their
halls with boughs of holly, evergreens and mistletoe to symbolize
winter's inability to prevent the renewal of life. Merrymaking came to
have a share in Christmas observance through popular enthusiasm. The
medieval secular celebrations lasted for a "season," extending from
Christmas eve to Epiphany, and in some localities even from St.
Thomas' Day, Dec. 21 (honoring the "doubting Thomas," disciple of
Jesus) to Candlemas (February 2).
There was some dispute about the proper date of the birth of Christ
and not everyone agrees even to this day. It was not until A.D. 350,
that December 25 was declared the official date for celebrating
Christmas by Pope Julius I. When the fathers of the church decided to
settle upon a date to celebrate the event, they wisely chose the day
of the winter solstice, since it coincided with some rival religions'
celebrations and the rebirth of the sun and approaching longer days,
symbolized by bon-fires and yule logs. December 25 was a festival long
before the conversion of the Germanic peoples to Christianity, it
seemed fitting that the time of their winter festival would also be

the time to celebrate the birth of Christ. The darkness that had frightened and threatened to defeat the ancient pagans, was forever defeated by the coming of Christ."

So there you have it. Jesus was not the reason for the season. Christmas, as we know it, is another example of Christian plagiarism and crusades. They stole the holiday from the pagan to wipe out the competition by creating the myth of a fake birth to a virgin. Can you believe that people actually buy that? "Honest honey, it was an angel of god, not Bob next door."

So enjoy the holidays with family and friends. It is a special time, the beginning of Winter, the shortest day of the year (in the northern hemisphere), but please do not insult the nonbelievers with the Christian-fabricated myth of the "reason for the season."

If there were a broad problem with rules compliance I might agree with you.
But there isn't, and most of the scofflaws we hear on the bands know the
rules just fine --- they've just decided to ignore them or apply tortured
interpretations to support their egotistical agenda. K1MAN comes to mind.

Last I heard, it was sometime in the spring. So JC wasn't born on
Christmas Day
(DEC 25) but likely sometime during Lent. Around 6BC. It's a trivial
issue
as far as beliving in God anyway. Another trivial issue is that Adam
and Eve
thing that has some in the Bible Belt upset about evolution.

As for Santa Claus, he has more connection to JC than Xmas trees. Santa
is a modified version of St. Nichilas, who used to give gifts to kids in
his town to celebrate JC's birth.

It was partially cover to choose Dec 25th as, IIRC, Christians were
still getting fed
to lions in hte Roman Empire. So Christians could party without calling

attention to
themselves. Or was the Roman Empire history by then? Been a long time since
history class....

Did people really worry about the Sun going away forever instead of comming back
every year? Hey, any reason to party....

I have known several people who already had the technical background (or
most of it) and passed the exam and knew very little about the rules. Take
the Technician exam. There are only 5 questions on the test pertaining to
rules out of a total of 35 questions. You can miss all five and pass since
you can miss as many as 9 and still have a passing score. Plus the
questions don't begin to cover all the rules that directly apply to the
operations of a Technician class licensee.

> > The exams for the various classes could then
> > focus on operating procedures and technical

>
>
> What about the rules specific to each license class (VE rules, for
> example)? Also, some important rules are reenforced by repeating them at
> least one more time in another exam. How would you handle that?
>

None of the tests currently comes close to covering the full scope of rules
applying to the license class on that particular license exam and that is
what needs to be changed. Since Generals and higher can be VEs, they need
to test for the VE rules anyway. And yes Generals can be VEs as they are
eligible to administer Tech class license tests. Right now the General test
is sorely lacking in VE rule questions. The VE rules (in comparison to most
of the other material) are fairly simple so it wouldn't hurt the Techs to

learn them anyway.

Most of the rules apply across the board. Yes there are band limits for the different license classes so perhaps that could be put on the individual license exams or repeated on the individual exams for reinforcment but all classes need to know the baud rate limit for RTTY on HF. Even the Techs need to know this if they chose to earn HF privileges or if the code is done away with in the future.

If the applicant has studied sufficiently to get 75% right on a rules only test of say 100 or so questions, he/she shouldn't have too much problem remembering the rules.

The rules that get reinforced on today's testing happen to be those that are the easiest to remember. They are items such as: no playing of music, no profanity, no interference etc. They are the common sense items that nearly everyone can remember with just a single test simply because they are common sense. That some people choose to flout those basic common sense rules doesn't mean they don't know them.

>
> > For example, let's call the rules test Element

> rules would eliminate that system of reenforcement. Also, there are about
> 100 questions in the current written exams, from a pool of about 600
> questions. Beyond the rules, how would you break those questions down for
> each element?

The rules covered in the exam barely scratch the surface. And one can miss most or all the rules questions and still pass the current exam element. The rules that get reinforced are only those that are major (i.e. no interference or false distress calls for example) and generally are easily remembered anyway.

I regularly have people tell me they'd like to practice their code on the air but "can't because they are only a Tech." They are totally unaware that they can work code in the VHF and higher spectrum so if they want to practice with a friend (or elmer) or work the DX 6m band openings on CW, it's perfectly legal to do so. Another example; many people at all levels of license classes are very confused about the difference between regulated band requirements and band plans. This question comes up over and over.

As far as then filling in on the existing tests to make up for moving rules to a separate element, there is plenty of operational and technical material, etc. that could be inserted. Again, take the Tech test. There is very little on digital operations or satellite operations yet these are open

to Technicians. Here is another example. The tests do not have questions addressing the issue of how far from the band edge one should stay to insure that none of their signal is outside the allowable band. I've heard Generals, for example, operating LSB at 7.226, just 1kc above their band limit, which puts part of their signal out-of-band. And it's not limited to Generals. I've heard Extras operating LSB at 7.151, which is the same problem. They, of all people, should know better but often do not. It's not adequately covered in the study material or the exams.

Or another area that could be included in the test, although I'd admit it's not a necessity, is something on the history of amateur radio. How many people realize amateurs made major contributions to the development of radio and what those contributions were? Cell phone technology is basically a commercialized version of the linked repeater systems with phone patch that amateurs developed. They've automated functions that the amateurs left as manual functions.

Or how about including a little bit on space weather and it's effects not only on propagation but how major flares can potentially effect electronics in general.

Or how about a bit more detail on how to address RFI issues. The coverage in the licensing and testing is extremely limited.

There's no shortage of valuable material that could be used.

Dwight that argument can be turned against the proposal to eliminate code testing as follows so don't go there.
"Finally, I have to wonder if there is any reason to change the exams at all.
The current exams have evolved over many years, and I just don't see how the suggested changes I've seen (yours and others to eliminate code
testing) offer a real improvement."

Although nothing will stop the deliberate violators, knowing the rules helps prevent the good and decent people from making mistakes. It will help prevent, but not completely stop, well intentioned but uninformed people from spreading misinformation about what the rules are. Do you know how many times I've had to show them the actual FCC rules to convince people (including Extras) that 50.0 to 50.1 and 144.0 to 144.1 are CW only with not even digital modes allowed? It happens several times a year. They have fallen into the trap of thinking, incorrectly, that VHF and higher has only band plans when in fact it does have a few regulatory limits and this is one of them.

The top three things that any ham should know, in my opinion, are rules/regulations, safety, and good operating practices. These need a great deal more coverage than they currently get.

Frankly, I believe VE rules don't belong on the license exam at all.
Far better to focus on operating rather than regulatory minutia
of how to operate VE sessions, etc. I'd have no problem with
a "VE" endorsement if the FCC deemed it necessary or just
handle things as they do today via ARRL, W5YI or other
VE accreditation (sp?).

First off, there's bound to be disagreement about what constitutes a "rational
relationship"

Second and more important is, if we don't use spectrum as an incentive, what do
we use?

If we use power (as Hans suggests), there's little incentive for QRP and low
power folks to upgrade. And since we're supposed to use the minimum power
required by the situation anyway.....

If we use modes as the incentive, which modes do we use for the incentive?

There's also the question of enforcement. You can tell right away if someone is
outside their allocated spectrum, but power is another issue.

Phil, I said it before the restructuring and I''ll say it again.

"What I fear most about the restructuring is a lack of enforcement,
and what I fear most about maintaining the status quo is a lack of
enforcement."

Having people memorizing the rules is completely meaningless unless
the FCC enforces them.

JJ,

"Why you think hams are interested in what radios
and antennas you use to SWL with is beyond me."

Since this was Cross Posted to several NewsGroups:

* rec.radio.amateur.policy, [Amateur - HAM]

* rec.radio.amateur.misc, [Amateur - HAM]

* rec.radio.shortwave, [S H O R T W A V E]

* rec.radio.cb [C B]

The Devil Is In The Details...
So "GS" is simply communicating his 'status' as a SWL.

The Question Every Amateur Must Ask Themselves is . . .
Is Any Body ? ? ? L I S T E N I N G ? ? ?

YES - But they may be a lowly SWL and You will Never Know;
Unless the SWL sends the HAM a QCL Request and the HAM Replys in Kind.
? How many Amateurs Actively Seek QCL Reports form SWLs ?
? How many Amateurs 'send out' "QCL Cards" to the SWLs ?

Exus Laxus Good Buddy ~ RHF
Breaking-On-the-Low-Side - Can I Get a Radio Check ? QC? QC? BS!

Hmm, well I saw it at one place last week, along with MT, CQ, and the
scanner one, I can't think of the name. Leo's bookstore has them all,
they used to have the British SW Magazine and Practical Wireless too,
but not lately.

I haven't been to B Dalton in a long time, but Barnes and Nobles had it
a couple of months ago.

I guess you will have to subscribe, it's cheaper than buying it anyway.

Incentive?

Jim, you sound like a typical eastern liberal with an agenda of social
engineering.

You're either qualified for a ham license or you're not qualified. This
incentive notion (and Steve Robeson's 'structured occupancy' notion) are
liberal ideas whose time has gone.

Technically you don't "subscribe" to QST. You join the ARRL and receive the
magazine as a result of your membership.

I don't think there has ever been a true communist state, so it's
impossible to say what it would be like, or if it could even be done. The
Soviet Union was a highly stratified soceity, and didn't allow what we
would call unions.

All it conveys is he owns two radios and some other stuff, it conveys nothing about his 'status' as an SWL. Just a brag list. Maybe I should list all my ham equipment with my postings, like anyone would care.

> You mean like in the "21st Century" paper?

Yes! So many of the arguments used in priceless instruments like that
can be used against any knowledge requirements whatsoever.

Why should I have to learn about (fill in the blank), I never intend
to(fill in the blank)?

Why sould anyone be discriminated against? Even NCVEC wants a entry
level license that is geared toward an average 6th grader.

Any tying of knowledge to priveliges is unwarranted social engineering.
I mean what are ya, a liberal? (must be said with a sneer)

Any tying of priveliges to knowledge is hazing. What is this anyhow,
some sort of radio God fraternity?

Technology has brought us to the point that with a few minor adjustments
(modified radios to eliminate band edge problems, elimination of
homebrewing to get rid of dangerous experimentation, perhaps even
potting the interiors of transcievers) we will be able to transform Ham
radio into the true PEOPLES radio service.

True Amateur Radio Nirvana

from your humble Cassandra, Mike.

Sure, but let us go past legality for a minute. Those jokers get on the
air and don't fry themselves in the process. They put out a signal too,
even if it is often overmodulated to an extreme. But there they are,
exhibit one. At the lowes common denominator, NO license needed.

Yeah, well I think they are wrong. And I think I know enough about human
nature to give myself pretty good odds of being right.

Personally I think good true conservative idea is to allow people on
the air with no licencing requirements whatsoever, then cull out the
ones that violate the rules.

5116. Ham Radio in The Information Age and Terrorism

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-31 03:41:09 UTC
From: Kim W5TIT <kimscliff@yahoo.com>
Message-ID: <bstgh0$vld@library2.airnews.net>
Source record: 84692

According to a story in the Washington Post, by Dan Eggen, on Tuesday, Dec. 30, 2003:
An FBI intelligence bulletin sent to law enforcement agencies last week warned that "terrorist operatives may rely on almanacs to assist with target selection and pre-operational planning" because they include detailed information on bridges, tunnels and other U.S. landmarks, officials said.

OK, fault me and sneer at me all you want but, isn't the above just going way too far? (the rest of the story can be read on the Washington Post website--just do a search on the word almanac and it should be around the second item in the list). I mean, I understand the fear, the tendency to jump to safety, but even if terrorists are using almanacs, do we want to be "caught" with one if we are thought to be acting "suspicious" as is mentioned in the article?

Sheesh, what about ham radio?! One of the most widely used communication mediums in this country and maybe the world, right? What do we open ourselves up for by being on the air and "just talking?"

> (or most of it) and passed the exam
> and knew very little about the rules.
> Take the (snip)

While that might be an exception, would a person with a technical background be the type to ignore rules? Instead, I suspect a person who would make the effort to gain a technical background would also likely make the effort to learn the rules of any activity he or she might be involved in.

> (snip) Plus the questions don't begin to
> cover all the rules that directly apply to
> the operations of a Technician class
> licensee.

Well, if you're looking for a test to cover all the rules, it seems to me you're looking for a test with several hundred questions. College students don't even have to take a test with several hundred questions to pass a class to prepare for a career. Likewise, an extensive exam like this doesn't fit into the current exam concept (basic exams for entry into each license class). With that in mind, how are you going to sell the FCC on that idea?

> None of the tests currently comes close
> to covering the full scope of rules
> applying to the license class on that
> particular license exam and that is
> what needs to be changed. (snip)

Why? Do you have some evidence (personal, rhetorical, or otherwise) that would suggest the current tests are linked to a specific problem with rule violations? From what I've seen, most violations are the result of intentional rule infractions, not ignorance of the rules themselves.

> If the applicant has studied sufficiently to
> get 75% right on a rules only test of say
> 100 or so questions, he/she shouldn't
> have too much problem remembering
> the rules.

My wife only had 50 questions on the exams to pass her international law class recently (two 20 question exams and one 10 question exam). You're asking for much more from people preparing for what is fundamentally a

recreational activity. That, in my opinion, is a little ridiculous, Dee.

> The rules covered in the exam barely
> scratch the surface. And one can miss
> most or all the rules questions and still
> pass the current exam element. (snip)

You keep saying that, but do you have anything to suggest it has ever happened (much less commonly so)? Again, it is theoretically possible, but not really very likely. As I said before, a person that poorly prepared would likely miss several other questions on the exam, meaning he or she would almost have to get the majority correct on each part of the exam to pass the overall exam.

> I regularly have people tell me they'd
> like to practice their code on the air but
> "can't because they are only a Tech."
> They are totally unaware that they can
> work code in the VHF (snip)

Did they tell you that (they were unaware they can work code on VHF), or is that your interpretation of their comment. I've made a similar comment once or twice over the years - not because I was unaware I could work code on VHF, but because there are so few others doing so on those frequencies.

> Again, take the Tech test. There is
> very little on digital operations or
> satellite operations yet these are open
> to Technicians. (snip)

There was such material in the pool I studied (7/97 - 6/01 pool). For satellite, questions T1C01 through T1C11, T1E05 through T1E08, T3C01 through T3C05, T3C10 through T3C12, and a few others here and there throughout the pool. There are a similar number of questions for digital operations.

> Or another area that could be included

> of amateur radio. (snip)

> Or how about including a little bit on
> space weather and it's effects not only
> on propagation but how major flares
> can potentially effect electronics
> in general. (snip)

Come on, Dee. If you throw in a little more math and language skills, you could almost offer a college degree to those who pass the exams you want.

> Here is another example. The tests do
> not have questions addressing the issue
> of how far from the band edge one
> should stay to insure that none of their

> signal is outside the allowable band.
> I've heard (snip)

Not in so many words, but the concepts are there (bandwidths of various modes and frequency limits). The old Novice used to have a couple of questions about this, but I'm not sure that made it's way over to the new tests.

> Dwight that argument can be turned
> against the proposal to eliminate code

> at all. The current exams have
> evolved over many years, and I
> just don't see how the suggested
> changes I've seen (yours and
> others to eliminate code testing)
> offer a real improvement."

Not really. My objection isn't based on the fact that the current exams have evolved over the years, but on the fact that I don't see how the suggested changes offer an improvement. The part about the current exams evolving over the years was intended to point out how well they fit the current needs, leaving little room for improvement by the suggestions offered. The same cannot be said about the code test because it hasn't really evolved to fit the current needs (from a regulatory perspective, there is no current need for the code test). Now, before this turns into a code test debate, lets drop this at that.

> The top three things that any ham should know,
> in my opinion, are rules/regulations, safety, and
> good operating practices. These need a great
> deal more coverage than they currently get.

Obviously every Ham should know those things. But, as noted in section 97.3 of the rules (below), this is an activity oriented towards self-study or self-training, not massive tests with extensive knowledge before entrance.

Section 97.3
"A radio communications service for
the purpose of self-training,
intercommunication and technical
investigations carried out by amateurs,
that is, duly authorized persons
interested in radio technique solely with
a personal aim and without pecuniary
interest."

The rules are there for any Ham to study on their own - with plenty of warnings in the exams about what might happen if they don't follow those

rules.

Just my point. I don't want to belong to ARRL just as I don't care to
belong to AARP, NRA, AAA, Skinheads, etc. I just want to read their
magazine when it has something that interests me. I wouldn't buy it
every month as most of the time it has useless drivel about some
clowntest or whether someone died or some such crap. ARRL and QST have
a short time left as the active Ham population lessens. If they took a
real survey as to how many real active ham there are they would find
the number far less than they think. I'm not talking about members,
I'm talking about HAMS that really use a radio to transmit a signal.
Doesnt matter what band. How many transmit a signal at least once a
week? Most don't.
Look at your local HAM clubs, talk to the members(if you can wake them
up). Most show up and act disgusted with the club, Ham radio, life in
general. New folks are never there. Ya I know about your Skywarn in
Flint, MI. Great service! Could be run on CB, NEXTEL, GMRS.

The point is that no other licensing (federal or state) takes such a
position....i.e. where the additional privileges are not otherwise
a function of additional knowledge required for the license.

> >> Would you rather that FCC did away with the Extra, Bill?
> >> For that matter what about the General?
> >
> > If we adopt the philosophy, it could be done. Insane, but stranger

There are, as we have discussed, valid privileges which could be
tied to the increased license knowledge. Power would be a good
example (IMHO). Most of us have agreed that it makes almost
no sense to have the entry level license (technician) allowed to
run 1500 watts based on a knowledge base of so little technical
and theory.

Cheers and Happy New Year to all,
Bill K2UNK

Well then you can't expect the magazine to be sold at outlets when you only buy it once in a while. They've got to recoup the costs of printing and distributing and the "once in a while" buyer just doesn't provide that.

> If we use power (as Hans suggests), there's little incentive for QRP and
low
> power folks to upgrade.

The irony, however, is that I would bet most people that
are dedicated QRPers are much more tehnically oriented

to begin with and more likly to upgrade. On the other hand,
IF a QRPer is content with the entry level power limits
and doesn't choose to upgrade, what's the harm? One can
look at all those that don't upgrade today...even with
spectrum privileges as the enhancement...to see folks that
are content at their current license level and are also good
hams.

> And since we're supposed to use the minimum power
> required by the situation anyway.....

True, but the FCC has never made a big case of checking to
see that everyone is running at the least practical power.
Additionally, I suspect the FCC concern on the "least power"
is driven more by those running "big" power rather than
anyone run a basic rig of 100 watts or less.

> If we use modes as the incentive, which modes do we use for the incentive?

I don't see modes as an incentive.

> There's also the question of enforcement. You can tell right away if
someone is
> outside their allocated spectrum, but power is another issue.

Yet it has been an aspect of Novice license for over 50 years.
I agree the enforcement would have its problems, but I suspect
the gross violations could be detected (e.g. if limit is 200 watts
and someone is running a kilowatt). In the end, I believe "most"
hams want to operate legally and will do so. Those that might run
double their allowed power (say 400 when limited to 200) are
only fooling themselves.

> >> >What is the technical competency difference between an Extra

Maybe we could tie some power limits to frequency
spectrum which would then create a valid reason to not allow
a lower level licesnse in that spectrum slot.

> >> But the FCC thinks it's a good idea to reward additional

> >
> >I don't oppose the concept, I oppose the illogical implementation.
>

> We can agree to disagree about the logic.
>
> But what should be used for an incentive besides spectrum?

I agree with Hans that power certanly can be and has been.
Also, at the risk of being stoned, how has the Canadian
entry level license been going which restricts those hams to
commercial equipment only? Perhaps an entry level USA
license could have a restriction of commercial only rigs
"OR" hmebrew transmitter "IF" the homebrew has been
checked out and signed off as OK by an Extra class ham.

Allowing "homebrew" via an Extra certification process would
foster positive relationships and Elmering (IMHO).

>
> Some of the knowledge does, such as HF propagation.

Yet the "only" difference between technicians not allowed
any HF and those allowed on the "novice" segments is a code test...
no additional knowledge of HF needed for Tech with code
to operate the Novice segments.

In hindsight, the FCC certainly should have seen it coming. The big
mistake,
in my opinion, was the failure of the FCC to take into account the
basic "plug-n-play aspect of CB, the multitude of sales outlets via Radio
Shack (Tandy), and the constantly lowering of CB set costs, especially
once they became all solid state.

Wrong. A true conservative desires the least practical government intervention in life. Clearly a "free-for-all" no license approach to ham radio wouldn't cut it and, as such, I and other conservative minded individuals do support ham licensing. Where we depart from the current approach is in the recognition that the "incentives" of today's licensing do NOT dovetail with the knowledge needed to pass the higher level license exams.

Cheers,
Bill K2UNK

> belong to AARP, NRA, AAA, Skinheads, etc.

Can you "just buy" the magazines of AARP, NRA, AAA, etc.
without joining? I am always amazed at people that want the "benefits"
of an organization's efforts, in this case the publication, but don't want
to support the organization by joining. I see the same thing at times
in the antique car hobby. People that bitch about the club rules
at a car show, or otherwise want technical help from club officials
but won't part with the few bucks it takes to join.

>

I think 50 to 100 questions ought to do it. Only the pool would need to be
several hundred questions, just as today's pools are far larger than the
number of questions actually occurring on any one exam.

How many questions has she had to pass to get her law degree and to pass her
bar exam?

Fifty to 100 multiple choice questions on the FCC rules is simple as the
rules are very simple.

>
> > The rules covered in the exam barely
> > scratch the surface. And one can miss

> would almost have to get the majority correct on each part of the exam to
> pass the overall exam.
>

On the Tech exam there are only 5 rules questions. That means missing all 5 gives you a score of 30, which is passing. This gives you room to miss several other questions on the exam. However several of those 5 are so common sense (i.e. no interference) that even someone who has not studied will not miss them all. Afterall the passing grade for the exam is only 74%. That means you can miss a total of 9 and still get it.

Neither the examiners nor the applicants know which specific questions were used on any one exam. The answer sheets and question sheets are separated. So determining whether someone had difficulty with the technical, operating, or rules sections is not allowed at the test session. The data could be computerized and correlated at the VEC but isn't. However in teaching classes and using practice exams, it is common for a student to struggle with a particular section while acing the others. The section will vary from student to student however.

>

They actually told me so and were astonished that it was legal for them to work CW on VHF even though they had not passed a code test. The sad thing is the only people I ever find on VHF CW are Generals, Advanced and Extras.

> pool. There are a similar number of questions for digital operations.
>

The current question pool however no longer includes the data rates for digital. This is quite important for legal operation that does not exceed the bandwidths for these modes. These groups in the pool are repetitious repeating the same question in several forms and thus a lot of important material is omitted.

>
> > Or another area that could be included

Note that I said these areas aren't really necessary but simply interesting.
One or two questions in the pool might spark a person's interest to pursue
self study in these areas.

Difference of opinion is fine but don't assume that the FCC knows what they
are doing. Just because they've said it doesn't make it true. They have a
long history of mistakes.

>

Adding one 50 question test on rules hardly constitutes massive tests with
extensive knowledge. Changing the handful of rules questions in the current
tests to other material if a separate rules test were instituted hardly
constitutes asking for extensive knowledge. My comments on what could be
used for this were to point out that there was a wealth of material to pick
from not to say that ALL technical and operating issues should be covered.
Or one could simply reduce the number of questions in the Tech, General, &
Extra since the rules would already be covered in the rules exam..

There are NOT plenty of warnings in the exams about what can happen to
violators if they do not follow the rules. Reread the question pool. There
NO questions in the Technician pool about the possible penalties for
violating the rules. Questions about the rules, yes. Questions about the
penalties, no.

If that HAM is active on CB, does that count? It's a radio signal.

I don't think it is practical to test everyone on everything. Tests are written in such a way that the candidate doesn't know what will come up, so has to learn everything in the pool. There should be more questions in the pool, though, covering topics that are presently left out.

Interestingly, WRC 2003 laid down a syllabus for the first time. However, I confess I have no idea whether current FCC tests comply with it or not.

Unlike in the US, the UK tests have extensive questions on operating practice. One thing at least that comes out of that is that UK hams all know the international phonetics by heart. US hams don't, because it's not in the FCC question pools. It should be. There are also extensive questions on interference in the UK, including questions on band edges. If that were the case in the US, I doubt if you would come across so many US hams operating USB on 14.350 or the like (I hear them too, and much too often). The UK question pools are not published, but I know these questions occur.

This is not meant to say that the UK tests are superior, it is just an observation on a couple of things that ought to be in the FCC question pools that aren't, and the corresponding broader areas in which the FCC tests are weak. Yes, I suppose I should write some questions on these subjects and submit them. It is one of the good points of the US system that I could do that. It is perhaps also one of it's bad points, in that questions submitted by volunteers may have a few holes in the first place

(gaps in coverage, not necessarily flaws in the questions).

73 de Alun, N3KIP (Ex-G8VUK, G0VUK)

PS: I am a 'know-it-all' EE, but I don't think anyone in my position would take the tests without at least reading Part 97.

Alun, not everyone is as conscientious as you are about having checked out
the rules. Of those hams that I personally know, only a small percentage
have a copy of the Part 97 rules and an even smaller percentage bother to
keep up with making sure it is current.

Also you didn't have to quote the ENTIRE discussion to make a reply. I was
beginning to wonder if you had written anything as I scrolled down.

Wrong yourself Bill. I say that a person takes what is their own political leanings, then applies their personal thoughts on the Morse code or testing issue, and tries to apply the label.

If you are conservative, and pro code, the elimination of Morse code is a liberal thing, and vice versa.

I think that Ham licensing is a leftover of social engineering practices. The reason that many conservatives support it today is a cultural inertia - it is old and status quo, so it is good. But it ain't conservative - it's almost like having a Union card. You have your Apprentices, you have your Journeymen.....

Check the figures yourself then check how many are really active. Yes
you can but NRA and AARP rags on the stand. AAA no. I quoted no data,
I made an observation. Get you head out the sand and look around. See
all of your old buddies just hanging around the club meeting doing
nothing? is field day as well attended as it was in the 60's? Are new
folks welcomed? Is help provided?
If so then consider yourself lucky.

Which in turn Dan was IMHO due to the incentive debaucle. I think we all need to kick our collective asses for allowing a lot of things to happen over the years.

Film at 11 as this is New Years Eve ....

And what "free upgrade" did you see in the last round or
restructuring?

The only thing that remotely resembles "free", was giving Pre-87
Technicians credit for the General written exam which they took.
Since the exam was EXACTLY the same as Generals took, I don't see any
freebie there.

But just wait till ARRL BoD meets next month..... I expect to see
them recommend a three-tier license regime, with a new low-powered 50W
beginners "C" license, a new mid-range "B" license with 3-400W power
limit, and a new top of the line "A" class license with 1.5KW power
limit and a CW test in the 15-25WPM range. Frequency ghettos for "C"
and "B" similar to now. Current Novice/Tech get free upgrade to "B"
privs, current General/Advanced get free upgrade to "A".
Yawwwwwnnnnnnnnnnnnnnn!

I'm sure I'll miss some of the details in their proposal, but the
above is pretty much the way I read the tea-leaves.

Pending Dwight's reply, I can add from my own experience.

Minimum accredited law school requirements for a JD were 80 units of
classwork, in which 60 units required written tests of six essay
questions (3 midterm, 3 final) per unit, one hour per essay. Rarely
did we have a multiple choice or fill-in-the-blank exam. The other
20 units were performance subjects where every day was, in effect,
an exam.

The Bar Exam is something different. Each state has slightly
different requirements, one or two days' worth of written "essay"
exams and the one-day Multistate Bar Exam (MBE). The MBE is a
national requirement, a 200-question multiple-choice exam,
100 in the morning, 100 in the afternoon, with three hours per
session. The time for each question comes out to 1.8 minutes each.
Half of the questions come from a published 500 question-and-answer
pool. Of course there's a hitch - two or more choices are close to
the expected answer and it's the applicant's job to pick the right one.

In the year that I took the Bar Exam, most states required a minimum
of 130 correct answers (65%) to even be considered for admission,
and the average nationwide was 132 including the superstars from
places like Harvard and Yale Law Schools. California - the toughest
of the states - granted admission to anyone who scored 152 (76%) or
more, regardless of his/her performance on the written portion.

Not quite the same as the FCC license tests.....

>Fifty to 100 multiple choice questions on the FCC rules is simple as the
>rules are very simple.

50 seems to be a reasonable number for the average applicant. This
isn't, and shouldn't be, a Bar Exam because folks who pass the rules
exam are not expected to be qualified to do interpretation and
analysis to the level and precision that an attorney does.

Another radical idea: The (commercial) radiotelephone operator's exam has two elements that all classes must pass: Element 1 dealing with Rules and Regulations, and Element 2 dealing with operating practices and procedures.

As this is a requirement even for a charter boat skipper operating in tidal waters who isn't even allowed to do anything with the transmitter except to operate the external channel and volume knobs, I can see having a counterpart of perhaps another 50 questions in the Amateur exam dealing with operating practices in all modes.

Like the Rules exam, pass it once, never have to pass it again unless the license lapses beyond the grace period for renewal or the licensee's conduct is found to be so egregious that a re-exam under FCC supervision is necessary - "all or nothing".

Not really....you still have to goofs on digital jumping all over the CW guys on 40.

Heard a guy on 75 the other night say he wanted CW testing elliminated so the FCC could/would move phone down to fill in the gap.

I told him, thats fine. I'll just start operating CW above 3750.

Dang Hans....imagine....a three tier license structure....what a wonderful
thought....too simple, to obvious, and necessary. So it won't happen.

In article <nwBIb.16932$IM3.5849@newsread3.news.atl.earthlink.net>, "Bill Sohl" <billsohl@mindspring.com> writes:

>> Personally I think good true conservative idea is to allow people on
>> the air with no licencing requirements whatsoever, then cull out the
>> ones that violate the rules.
>
>Wrong. A true conservative desires the least practical government
>intervention in life.

A true liberal desires the least practical government intervention in life as well.

The devil is in the details of what "least practical government intervention" really means.

Just one example: The government used tax dollars to rescue Chrysler about 20 years ago. It turned out to be a good gamble because Chrysler paid back all of the money with interest, and in the end it cost the taxpayers nothing.

Now - was the bailout a "liberal" move to save workers' jobs and try to manage the economy? Some "conservatives" would say that companies that get in trouble should be allowed to fail in a 'free market' and not propped up with tax dollars.

OTOH, was the bailout a "conservative" move to save investors' money? Or to give some help to an industry bedeviled with safety, pollution and economy regulations *and* the double whammy of foreign competiton and two oil crises?

Some "liberals" would say that Big Business should not be propped up with tax dollars. (Ma's Diner wouldn't get such a bailout)

>Clearly a "free-for-all" no license approach
>to ham radio wouldn't cut it and, as such, I and other conservative
>minded individuals do support ham licensing.

Most "conservatives", anyway. The exact same is said by most "liberals".

>Where we depart from
>the current approach is in the recognition that the "incentives" of
>today's licensing do NOT dovetail with the knowledge needed
>to pass the higher level license exams.

Not perfectly, anyway.

73 es HNY de Jim, N2EY
